Reporter's Guide to the Millennium Development Goals

Covering Development Commitments for 2015 and Beyond

Throughout its more than 60-year history, the International Press Institute (IPI) has consistently promoted the view that journalism has the power to change lives. So the decision to commission this book was critical given the urgency with which the media must re-engage with social aspects of development.

The Millennium Development Goals (MDGs) represent the greatest global commitment in history to the material betterment of the human condition. Yet with less than three years to go before the original target deadline of 2015, many of the promises contained in the MDGs remain unfulfilled.

IPI’s Reporter’s Guide to the Millennium Development Goals is the first publication of its kind, directly addressing journalists and editors writing about human development and arming them with the tools to further change. While we believe the guide comes at just the right time to inspire stories with the 2015 date in mind, it will also prove invaluable for the post-2015 MDG agenda as well.

This book is the result of an abiding dedication to socially inspired journalism and the fruit of an exciting, international collaboration between award-winning journalists, UN agencies responsible for monitoring the MDGs, and IPI’s experienced staff.

In Part One, journalists will find an overview of the history and structure of the MDGs, in addition to a comprehensive list of the MDGs. Part Two contains contributions from all five UN Regional Commissions, describing the current state of the MDGs in their respective region and offering advice as to how the press can improve coverage.

Concrete advice for covering a range of MDG-related topics—among them corruption, gender issues, poverty, and education—can be found in Part Three, written by journalists with deep and diverse experience covering stories that impact communities across the globe.

In Part Four, the OPEC Fund for International Development explains why the organisation considers “energy poverty” to be the missing MDG, and the United Nations Development Programme discusses the future of the MDG agenda.

Journalists will find in Part Five examples of strong, award-winning development coverage to serve as inspiration when crafting their own stories. Finally, in Part Six, four journalists from developing countries narrate their personal experiences and challenges in reporting on the MDGs and express why such work is critical to societal progress. Altogether, this guide is intended to inspire and encourage reporters and their editors to dig deeper and to give development stories higher priority on newspaper pages, airwaves, and the World Wide Web.

On behalf of IPI’s Executive Board, and its members in more than 120 countries, I am proud to present the Reporter’s Guide to the MDGs. We hope that it will be tremendously useful as the global community considers the work to be done before 2015—and that will certainly await beyond.

Alison Bethel McKenzie
IPI Executive Director
(Table of Contents)

(Part 1) Foundations

10 (1) Introduction: No Time to Lose
Scott F. Griffen
40 (7) The MDGs in Africa: Reporting on the MDGs—It’s in Our Own Best Interest
UN Economic Commission for Africa (UNECA)

14 (2) The History of the Millennium Development Goals (MDGs)
Natalie Sanders Vázquez
48 (8) The MDGs in the Arab States: A Region at a Crossroads
UN Economic and Social Commission for Western Asia (UN-ESCWA)

18 (3) What are the MDGs and Who is Involved?
Ernestina Álvarez Guillén
54 (9) The MDGs in Asia and the Pacific: Help Wanted in Fast-Tracking Progress
UN Economic and Social Commission for Asia and the Pacific (UNESCAP)

22 (4) MDGs: The Full List of Targets and Indicators

(Part 2) MDG Achievement and the Media—Regional Perspectives

28 (5) The MDGs in Latin America and the Caribbean: Not Pessimistic, but Not Optimistic Either
UN Economic Commission for Latin America and the Caribbean (UNECLAC)

34 (6) The MDGs in Europe and Central Asia: Journalists, Apply Within
UN Economic Commission for Europe (UNECE)

(Part 3) A Practical Guide to Reporting on the MDGs

62 (10) The Big Story from a Global Perspective: The International Impact of MDG Coverage
Rachel Pofahl

68 (11) Investigative Journalism: It’s All About Cross-Border Cooperation
Paul Christian Radu

74 (13) Food for Thought: Tips on Covering Hunger
Marwan Macan-Markar

78 (14) A Right, Not a Privilege: Tips on Covering Education
Louisa Reynolds

84 (15) For Whom Does the Flag Wave? Tips on Covering Gender Equality
Guentl Hauk-Grauberg

90 (16) Reviving a “Tired” Story: Tips on Covering HIV/AIDS
Tolulak Esitpe

94 (17) Global is Local, Local is Global: Tips on Covering the Environment
Stephen Leahy

100 (18) A Dose of Advice: Tips on Covering Healthcare
G. Ananthakrishnan

106 (19) Holding the Big Fish Accountable: How to Uncover Corruption
Corm O’Shea

112 (20) Keeping an Eye on the Cash: How to Cover the Money Behind the MDGs
Kimberly S. Johnson

118 (21) On the Trail: How to Request Information from Authorities
Maya Primera

122 (22) The Art of the Interview
María Emilia Martin

128 (23) Energy Poverty: The “Missing MDG”
OFID Fund for International Development (OFID)

134 (24) The Way Forward: Thoughts on What Comes After 2015
UN Development Programme (UNDP)

140 (25) Key Resources and Contacts

(Part 5) Learning by Example: Prize-Winning Stories on Human Development

160 (26) “Pink Gold Rush”
Syed Zain Al-Mahmood

164 (27) “Medicine vs. Myth in Sierra Leone”
Nela Marie Obroueulier

168 (28) “Tereso is Just One Example”
Mario Alejandro Mancio de Laza

(Part 6) Stories from the Field: Personal Reflections on Covering the MDGs

176 (29) My Journey Through the MDGs (Haiti)
Jean Claude Louis

180 (30) From Canada to Ghana: A Personal Account (Canada/Ghana)
Sophie Nicholls Jones

184 (31) Eight Goals, One Collective Effort (Papua New Guinea)
Shirlyn Belden

188 (32) Why Write About the MDGs? (Nicaragua)
Maria Higdio Boles Flores

Thirteen years ago, in a celebration uniting every corner of the Earth, humanity welcomed the start of a new millennium, a singularly momentous occasion that harboured the promise of a better future for all.

In September of that year, the year 2000, an unprecedented number of world leaders gathered for the Millennium Summit in New York City and affirmed their commitment to helping the billions of individuals who lacked life’s most basic needs.

“We recognise that, in addition to our separate responsibility to our individual societies, we have a collective responsibility to uphold the principles of human dignity, equality and equity at the global level”, leaders and representatives of 189 UN member states acknowledged in the summit’s crowning document: the Millennium Declaration.

The Declaration took advantage of a rare temporal turning point to establish a set of development priorities for the coming years, including eradicating poverty, safeguarding the natural environment, and protecting society’s most vulnerable members, especially children.

These priorities were, in turn, expanded and transformed into the Millennium Development Goals (MDGs), at once a set of specific, statistically verifiable development objectives and a powerful symbolic commitment to human well-being.

But who was to be responsible for turning these lofty promises into reality, for implementing these well-meant if highly ambitious goals by the target year of 2015?

Then-UN-Secretary-General Kofi Annan made clear the answer: all of us. ‘The issues we are dealing with—from the elimination of poverty to the fight against AIDS and the protection of the environment—are issues that require all hands on deck.’

Indeed, it would be a grave error to think that only governments have the power to further the MDGs. Such a conclusion is an invitation to scepticism if we reflect that, left to their own devices, government bodies at both the national and international levels may decline to prioritize human and social development—or lose interest in the MDGs altogether.

If we consider the complexity and breadth of the goals themselves, it is clear that governments are but one factor in the success of the MDGs. Civil society groups compile statistics and defend the rights of the neglected. Private donors and philanthropists bring critical funds to where they are needed most. Scientists and universities lead research to identify innovative solutions.

And as for the journalists to whom this book is addressed? One could argue—as we do—that they are the most important element of all.

Introduction: No Time to Lose
Scott F. Griffen

By highlighting the stories of the incalculable many who still suffer from the aching realities of poverty, disease, and discrimination, journalists sensitise public opinion and remind those who signed their name to the Millennium Declaration how much work there is left to be done.
After all, the press has the unique power to bring information, once hidden or ignored, into the public sphere. By highlighting the stories of the inestimable many who still suffer from the aching realities of poverty, disease, and discrimination, journalists sensitize public opinion and remind those who signed their name to the Millennium Declaration how much work there is left to be done.

In a media environment of increasing competition and shortened attention spans, pieces on the MDGs don’t always sell the most papers or attract the biggest audiences, noted former New Zealand prime minister and current administrator of the United Nations Development Programme Helen Clark upon awarding a prize for development reporting in Latin America in 2009. ‘But they do help those who are most in need of a voice—the poor and the vulnerable.’

So while reporting on social issues, compared to political revolutions and financial crises, may not grab reader attention—a point Journalists for Human Rights Director Rachel Pulfer disputes in this book—it does make a difference in working to ensure that no-one is excluded from the Millennium Declaration’s stirring pledge.

When journalists are silent about the MDGs, the im-petus for honest action on development withers. Valuable aid falls into the wrong hands, misdirected by corruption and special interests that are stubbornly hidden. Such a neglect means the potential of the MDGs in transforming the lives of the world’s poor is not being realized.

There is also a concrete deadline: December 31, 2015, the target for the fulfilment of the MDGs. Having a specific date on the calendar can help convince editors that now is the time to mobilize coverage.

This handbook also seeks to make journalists who already cover social issues or investigate corruption conscious of the rhetorical power of the MDGs. Indeed, by linking their stories to these internationally recognizable goals, journalists raise the possibility that their stories will catch the attention of those in power—and, just maybe, make a difference.

But this book is also addressed to those reporters who have never thought about covering development before, but who wish for their words to have a lasting impact. With a deadline that the entire planet will be watching, what better time than now to write about something new? Perhaps your media or your country lacks coverage on key development themes such as education, hunger, or climate change. No matter the topic, the personal accounts and expert advice contained here can help the enterprising journalist get started.

We also know that, despite our best efforts, work on the MDGs will not end in three years. Plans are already underway to renew the MDGs for a post-2015 agenda, one that will maintain a focus on the core concerns of the Millennium Declaration while adding new priorities, such as energy access, which are also addressed throughout this book.

This handbook also seeks to make journalists who already cover social issues or investigate corruption conscious of the rhetorical power of the MDGs. In-deed, by linking their stories to these internationally recognizable goals, journalists raise the possibility that their stories will catch the attention of those in power—and, just maybe, make a difference.

But this book is also addressed to those reporters who have never thought about covering development before, but who wish for their words to have a lasting impact. With a deadline that the entire planet will be watching, what better time than now to write about something new? Perhaps your media or your country lacks coverage on key development themes such as education, hunger, or climate change. No matter the topic, the personal accounts and expert advice contained here can help the enterprising journalist get started.

We also know that, despite our best efforts, work on the MDGs will not end in three years. Plans are already underway to renew the MDGs for a post-2015 agenda, one that will maintain a focus on the core concerns of the Millennium Declaration while adding new priorities, such as energy access, which are also addressed throughout this book.

The 2012 MDG Progress Report, prepared by the UN Department of Economic and Social Affairs, delivered some encouraging news. Worldwide, extreme poverty—defined as living on less than $1.25 a day—has fallen from 650 million to 863 million.

These findings leave no doubt of the challenge ahead. And with 2015 just around the corner, there is little time to wait. So, journalists, grab this book and get started—there’s a deadline to meet.

Undoubtedly, fulfilling the role of development watchdog is not easy. Journalists must be prepared to fight for MDG coverage in the editorial room.

Nevertheless, the report emphasised significant shortcomings. The maternal death rate has decreased only slightly. 2.5 billion individuals lack access to proper sanitation facilities. 15.5 % of the global population is undernourished. The number of people living in slums has risen from 650 million to 863 million.
2

The History of the Millennium Development Goals

Nadia Sanders Vázquez

At the dawn of the 21st century, life for most human beings on the planet was not going well. In the poorest countries of the world, people were suffering from starvation and poverty, illnesses like malaria were killing children, and only a few had access to education. By the year 2000, at the birth of a new century and a new millennium, the planet was facing huge challenges. So, after 40 years of trying, world leaders took this unique opportunity to make a real difference in people’s lives and adopted the Millennium Development Goals (MDGs).

Since the 1960s, the world had battled to make life more tolerable for the majority. The United Nations summits held in the 1960s and the Universal Declaration of Human Rights1,2 were a significant beginning. In 1990, the Human Development Report of the United Nations Development Programme (UNDP) and the World Bank mentioned the need for social policies as part of economic reforms to end world poverty.

We saw the World Summit for Children in New York in 1990, the Earth Summit in Rio in 1992, the World Conference on Human Rights in Vienna in 1993, and the International Conference on Population and Development in Cairo in 1994.3 And one of the most important summits prior to the establishment of the Millennium Development Goals was the World Summit for Social Development in Copenhagen in 1995, when 117 heads of state subscribed to a compromise to eradicate income poverty by 2015.

The most significant effort in the run-up to the MDGs, and a part of their origin, was made in 1996 by the Organisation for Economic Co-operation and Development (OECD), with a report entitled “Shaping the 21st Century: The Contribution of Development Co-operation”. The document contained measurable development objectives that could be monitored and achieved with a global partnership effort. It proposed:

1. Reduction by one-half in the proportion of people living in extreme poverty
2. Universal primary education in all countries
3. Demonstrated progress toward gender equality and the empowerment of women by eliminating gender disparity in primary and secondary education (by 2005)
4. Reduction by two-thirds in the mortality rates for infants and children under five, and a reduction by three-quarters in maternal mortality
5. Access through the primary healthcare system to reproductive health services for all individuals of appropriate ages, as soon as possible
6. In terms of environment, the implementation of national strategies for sustainable development in all countries by 2005, to ensure that current trends in the loss of environmental resources are effectively reversed at both global and national levels by 2015

In the year 2000, the OECD, the International Monetary Fund, the United Nations, and the World Bank launched a publication named A Better World for All: Progress Towards the International Development Goals, urging industrialised countries to work for sustainable growth by providing more resources for health, education, gender equality, and environmentally sustainable development based on “the agreements and resolutions of the world conferences organized by the United Nations in the first half of the 1990s”. Preludes to the MDGs, these goals

2 Ibid
were very similar to the ones the OECD had designed four years before, but were now more specific:

1. Reduce the proportion of people living in extreme poverty by half between 1990 and 2015
2. Enrol all children in primary school by 2015
3. Make progress towards gender equality and empowerment of women, by eliminating gender disparities in primary and secondary education by 2015
4. Reduce infant and child mortality rates by two-thirds between 1990 and 2015
5. Reduce maternal mortality ratios by three-quarters between 1990 and 2015
6. Provide access for all who need reproductive health services by 2015
7. Implement national strategies for sustainable development by 2005, to reverse the loss of environmental resources by 2015

New times, new role

When the UN was founded, Earth had 2.5 billion inhabitants; two-thirds of the current UN members did not exist as sovereign states, and their people were still living under colonial rule. We lived in the grip of the Cold War, but in the last decade of the last century, many things changed.

The role of the UN had been successful in many areas but was still facing challenges in others. By the year 2000, the United Nations was 55 years old; Earth had 6 billion inhabitants, now, thirteen years later (2013), 7 billion.

The former Secretary-General of the United Nations, Kofi A. Annan, used the birth of the new millennium as an occasion to reaffirm the role of the UN and to act on making the world a better place. Even though the UN had participated in producing A Better World for All, it needed to have its own publication to take to the Assembly. So, A Better World for All: Progress Toward the International Development Goals, published in 2000, was needed.

The Secretary-General also explained that a fifth of the population owned 86% of all the wealth, and almost half of the villagers had less than US $2 per day. The majority of the poor were women, and some 220 were illiterate. Many of them were looking desperately for jobs that did not exist. Less than 60 of them had a computer and just 24 had access to the Internet. This village, he said, was our planet, and it was urgent to take steps to ensure that all its inhabitants could live free from hunger, and in the knowledge that their children would have real chances in life.

He also included information about the results of the world’s largest ever public opinion poll, The Millennium Survey, led by the Gallup International Association, a Zurich-based research institute, interviewed 57,000 adults in 60 countries (representing 1.5 billion people worldwide), spread across all six continents. The results showed that for people everywhere what mattered most in life, what was more highly valued than anything else, was to have good health and a happy family.

For the United Nations, most people who were involved in the poll considered the key tasks to be peace-making, the protection of human rights, and provision of humanitarian assistance. While in most countries the majority said their elections were free and fair, two-thirds of all respondents considered their country not governed by the will of the people, and believed their government had done too little to address environmental problems in their country. Many felt globalisation was a positive force that offered an opportunity to make an inclusive and equitable world.

Annan added, ‘We have many success stories to tell and positive trends to report—and I shall do both throughout this report. [...] The world’s people are nevertheless telling us that our past achievements are not enough, given the scale of the challenges we face. We must do more, and we must do it better’.

The Millennium Summit

It took the Assembly three sessions, held between June 1999 and May 2000, to decide that The Millennium Summit would be held from September 6 to 8, 2000 in New York, focusing on the role of the United Nations in the twenty-first century. During these sessions, the members also approved The Millennium Declaration draft, which stated that the values and principles of the 21st century should be freedom, equality, solidarity, tolerance, respect for nature, and shared responsibility.

Paving the way for the MDGs as we know them now, the Declaration was approved in September 2000 by the General Assembly of the United Nations at the first and only time all 189 heads of state have gathered in a UN assembly.

When the member states subscribed to The Millennium Declaration, they accepted collective responsibility to uphold the principles of human dignity, equality, and equity at a global level, and have a duty, therefore, to serve the world’s people, especially the most vulnerable, and, in particular, the children.

Nadia Sanders Vázquez was born in Mexico City and studied journalism and politics with the Mexican writer René Avilés Fabila at Metropolitan Autonomous University, Xochimilco campus. After receiving her degree, she covered local news for the newspaper Reforma from 2000 to 2007, and later reported on the legalisation of abortion in Mexico City for the newspaper El Círculo. In 2009, Nadia was selected to take part in the Balboa Program for Iberoamerican Journalists and, during her degree, she covered local news for the newspaper Tiempo in Madrid. Upon returning to Mexico, she covered the first same-sex marriages in Mexico City for CNNMexico Online, where she now serves as editor of national news, coordinating stringers and correspondents in the covering of the security strategy against drugs of the Mexican government and politics. The heads of state resolved to make the UN more effective in maintaining peace and security, by giving it the resources and tools it needed in conflict prevention and peacemaking. World leaders resolved to strengthen the rule of law and ensure compliance with decisions of the International Court of Justice, and to take action against terrorism, and the international drug problem. They also made the UN more effective in limiting the adverse effects of economic sanctions on innocent populations.
To Hermilio, a working day is no less than 12 hours. In return, he receives a wage that does not guarantee that his two children, who are six and seven years old, have food three times a day, nor does it prevent them having to walk miles to reach the nearest school.

This is the reality in the Cusarare community in Chihuahua, northern Mexico, and in many other parts of the world. The Millennium Development Goals (MDGs)—which underpin an alliance between governments and society geared at eradicating marginalisation—were created in response to the suffering of Hermilio and the billions of others like him around the world.

Drawn up in 2000, the United Nations Millennium Declaration, which contained the MDGs, was originally signed by 189 heads of state and now encompasses all 193 UN member countries. Significantly, signatory nations with greater purchasing power pledged more development assistance to all peoples, through external debt cancellation and the establishment of fairer trade rules, allowing for more equitable economic growth among nations.

In 2010, at the UN Summit on the Millennium Development Goals, the process of MDG achievement was analysed. With an eye toward 2015, countries were urged to develop action plans and high-impact solutions for areas where the statistics still fell (far) short of the ideal.

The commitment to achieve the Goals by 2015 is a matter not just for those in power, or for underdeveloped governments, but for society as a whole: NGOs, corporations, educational institutions, and the media should cooperate in a bid to meet the MDG deadline.

Overview of the MDGs (and of the actors working to meet them)

The first goal is to eradicate extreme poverty and hunger. According to the most recent UN MDG Report (2012),

poverty is on the decline in all regions of the world, and the percentage of individuals living on less than US$ 1.25 a day has been halved since 1990. But overall progress has been slowed by the global financial crisis that began in 2007, and current projections estimate that 1 billion people (16% of the world’s population) will still be living in extreme poverty in 2015.

To respond to the continued challenge of hunger, many governments and organisations have set up food banks and have increased the availability of staple crops to ensure food independence. In some places, in Latin America for example, community cooperatives have been created in order to deal with food shortages during extreme weather conditions, such as drought.

To achieve universal primary education is the second goal. Figures in 2010 indicated that 90 percent of primary-age children now attend school, but, here as well, progress is slow. The 2012 UN Report indicated that improvements have dropped considerably since 2004.

While companies and foundations have started building schools, granting scholarships, and offering more in-
centres to teachers to work in rural areas, improvement in the quality of instruction is still needed. Governments, meanwhile, have made efforts to increase enrolment at the basic level. Here, it is important to note that assessments of MDG Goal Two by local and international NGOs are more rigorous than governmental ones, as the former measure not only how many children go to school, but also what and how they are taught, and whether knowledge is retained.

The third goal is to promote gender equality and empower women. To this end, the UN Development Programme (UNDP) and the UN Entity for Gender Equality and the Empowerment of Women (UN Women) provide advice and support to projects designed to increase gender equity. In several countries, civil-society organisations have been trained to promote legislation to ensure gender equality, and to build community centres for women. As with all the MDGs, civil society and the media are critical to the success of furthering gender equality. In several countries, civil-society organisations have joined together to create humanitarian aid programmes that do not survive their first month. According to the most recent UN figures, in addition, statistics indicate that despite general gains in under-five mortality, 23 out of every 1,000 children worldwide still do not survive their first month.

Meeting this target requires global involvement. Anyone and everyone can play a role: even football clubs have joined together to create humanitarian aid programmes to deliver food to the world’s poorest households—children born into poverty are far more likely to die early—and to promote sustainable living.

Measurement of the fifth goal, to reduce maternal mortality by three-quarters, is difficult, but international agencies such as the World Health Organization (WHO), UNICEF, the UN Population Fund (UNFPA), and the World Bank estimate that 290 maternal deaths occur per 100,000 live births worldwide. In an attempt to reduce this figure, health agencies are working together to encourage expectant mothers to have at least three check-ups during pregnancy. In addition, governments and health-care manufacturers have led joint initiatives to improve maternal health during pregnancy by distributing vitamins and folic acid.

The sixth goal is to combat HIV, malaria and other diseases. Although HIV/AIDS infections have declined in sub-Saharan Africa, the changes are minimal in East Asia, Central Asia, and the Caribbean, and in all regions the highest rates of infection are among young people. As a result, governments, civil-society organisations, and entrepreneurs have implemented information campaigns, as well as prevention and detection programmes, including free testing, so that new cases are detected and treated early.

The seventh goal is to ensure environmental sustainability. Although deforestation levels continue to be alarming, the number of protected areas is increasing. Meanwhile, to improve environmental sustainability in high-population, low-income areas, the UN has asked countries to conduct censuses among populations living in slums, and to establish realistic goals at the national, regional, and local levels to improve the lives of slum-dwellers. Priority is being given to housing and basic services, such as water and sanitation infrastructure, transport and energy, and health and education, in a bid to halve the number of people without sustainable access to safe water and sanitation. Governments and businesses are promoting green-home building, the redesign of urban areas, and the promotion of better local jobs to avoid internal migration. The fewer opportunities people have in their community of birth, the greater the potential increase in urban poverty.

Educational institutions have also participated in the design of risk atlases, which chart a variety of risks in local communities and, thereby, encourage relocation in the face of potential natural disasters, and the avoidance of construction in areas where the environment is threatened.

The reduction of debt and the promotion of humanitarian aid are central to the eighth goal, which is to develop a global partnership for development. Strong economies are essential to accomplishing this goal but because recent recessions have placed government finances under strain, private initiatives and resource management have become all the more critical.

Achievement of the MDGs requires constant evaluation. Their achievement depends on cooperation and interaction among governments, businesses, civil society and, of course, the media. It is essential to publicise both progress and delays, because when citizens are informed they can exert more powerful demands on government to live up to their development commitments.
The framework of eight goals approved by the UN General Assembly included 21 targets that could be used as a road map towards implementing the Millennium Declaration. In addition, 60 quantifiable indicators were adopted by a consensus of experts from the United Nations, the International Monetary Fund, the Organisation for Economic Co-operation and Development, and the World Bank.

The official UN site for the MDGs indicators recommends disaggregating all indicators by sex and geographic location (i.e. urban vs. rural) as far as possible.

**Goal 1: Eradicate extreme poverty and hunger**

**Target 1a:** Reduce by half the proportion of people living on less than a dollar a day
1.1 Proportion of population below $1 (PPP)* per day
1.2 Poverty gap ratio
1.3 Share of poorest quintile in national consumption

**Target 1b:** Achieve full and productive employment and decent work for all, including women and young people
1.4 Growth rate of GDP per person employed
1.5 Employment-to-population ratio
1.6 Proportion of employed people living below $1 (PPP) per day
1.7 Proportion of own-account and contributing family workers in total employment

**Editor’s Tip:** Be on the lookout for the list of updated MDGs that is currently being developed by a high-level UN Committee. Check out the UNDP section of the book for information on what these new goals might be, keeping in mind that many of the expected themes—sustainable development and good governance—are already covered in this book. And, above all, don’t forget that fulfilling the goals listed here remains as important as ever.

**Target 1c:** Reduce by half the proportion of people who suffer from hunger
1.8 Prevalence of underweight children under five years of age
1.9 Proportion of population below minimum level of dietary energy consumption

*Purchasing Power Parity: A conversion rate that uses the price of comparable goods and services in different countries.
Goal 2: Achieve universal primary education

Target 2a: Ensure that all boys and girls complete a full course of primary schooling
2.1 Net enrolment ratio in primary education
2.2 Proportion of pupils starting grade 1 who reach last grade of primary education
2.3 Literacy rate of 15- to 24-year-olds, women and men

Goal 3: Promote gender equality and empower women

Target 3a: Eliminate gender disparity in primary and secondary education preferably by 2005, and at all levels by 2015
3.1 Ratio of girls to boys in primary, secondary and tertiary education
3.2 Share of women in wage employment in the non-agricultural sector
3.3 Proportion of seats held by women in national parliament

Goal 4: Reduce child mortality

Target 4a: Reduce by two-thirds the mortality rate among children under five
4.1 Under-five mortality rate
4.2 Infant mortality rate
4.3 Proportion of one-year-old children immunised against measles

Goal 5: Improve maternal health

Target 5a: Reduce by three-quarters the maternal mortality ratio
5.1 Maternal mortality ratio
5.2 Proportion of births attended by skilled health personnel

Target 5b: Achieve, by 2015, universal access to reproductive health
5.3 Contraceptive prevalence rate
5.4 Adolescent birth rate
5.5 Antenatal care coverage (at least one visit and at least four visits)
5.6 Unmet need for family planning

Goal 6: Combat HIV/AIDS, malaria, and other diseases

Target 6a: Halt and begin to reverse the spread of HIV/AIDS
6.1 HIV prevalence among population aged 15-24 years
6.2 Condom use at last high-risk sex
6.3 Proportion of population aged 15-24 years with comprehensive, correct knowledge of HIV/AIDS
6.4 Ratio of school attendance of orphans in school attendance of non-orphans aged 10-14 years

Target 6b: Achieve, by 2010, universal access to treatment for HIV/AIDS for all those who need it
6.5 Proportion of population with advanced HIV infection with access to anti-retroviral drugs

Target 6c: Halve by 2015 the proportion of people without sustainable access to safe drinking water and basic sanitation

Goal 7: Ensure environmental sustainability

Target 7a: Integrate the principles of sustainable development into country policies and programmes; reverse loss of environmental resources
Target 7b: Reduce biodiversity loss, achieving, by 2010, a significant reduction in the rate of loss

Goal 8: Develop a global partnership for development

Target 8a: Further develop an open, rule-based, predictable, non-discriminatory trading and financial system.
Includes a commitment to good governance, development, and poverty reduction, both nationally and internationally

Target 8b: Address the special needs of the least-developed countries. Includes tariff- and quota-free access for the least-developed countries’ exports; enhanced programme of debt relief for heavily indebted poor countries (HIPC) and cancellation of official bilateral debt; and more generous ODA for countries committed to poverty reduction

Target 8c: Address the special needs of landlocked developing countries and small-island developing states through the Programme of Action for the Sustainable Development of Small Island Developing States, and the outcome of the twenty-second special session of the General Assembly

Target 8d: Deal comprehensively with the debt problems of developing countries through national and international measures, in order to make debt sustainable in the long term

Target 8e: In cooperation with pharmaceutical companies, provide access to affordable essential drugs in developing countries

Target 8f: In cooperation with the private sector, make available the benefits of new technologies, especially information and communications

8.1.1 Debt relief committed under HIPC and MDRI initiatives
8.1.2 Debt service as a percentage of exports of goods and services
8.1.3 Proportion of population with access to affordable essential drugs on a sustainable basis
8.1.4 Proportion of total bilateral, sector-allocable ODA of OECD/DAC donors to basic social services (education, primary health care, nutrition, safe water and sanitation
8.1.5 Proportion of bilateral official development assistance of OECD/DAC donors that is untied
8.1.6 ODA received in landlocked developing countries as a proportion of their gross national income
8.1.7 ODA received in small-island developing states as a proportion of their gross national incomes
8.1.8 Net ODA, total and to the least-developed countries, as percentage of OECD/DAC donors; gross national income
8.1.9 Urban users per 100 population
8.1.10 Total number of countries that have reached their HIPC decision points and number that have reached their HIPC completion points (cumulative)
8.1.11 Debt sustainability
8.1.12 Proportion of population using affordable essential drugs on a sustainable basis
(Part 2)

MDG Achievement and the Media—Regional Perspectives presented by the United Nations (UN) Regional Commissions

The MDGs in Latin America and the Caribbean: Not Pessimistic, but Not Optimistic Either
UN Economic Commission for Latin America and the Caribbean (UNECLAC)

The MDGs in Europe and Central Asia: Journalists, Apply Within
UN Economic Commission for Europe (UNECE)

The MDGs in Africa: Reporting on the MDGs—It’s in Our Own Best Interest
UN Economic Commission for Africa (UNECA)

The MDGs in the Arab States: A Region at a Crossroads
UN Economic and Social Commission for Western Asia (UN-ESCWA)

The MDGs in Asia and the Pacific: Help Wanted in Fast-Tracking Progress
UN Economic and Social Commission for Asia and the Pacific (UNESCAP)
A certain cultural similarity based on the experience of European colonisation unites the 33 countries of Latin America and the Caribbean. Nearly five centuries ago, the Spanish, Portuguese, French, English, and Dutch settled in what they called the New World. Today, the region extends from the Rio Grande, at the southern border of the United States, to Antarctica, and unites indigenous and European cultures as well as, in a number of countries, African influences. Naturally, the expanse contains great climatic, economic, linguistic, ethnic, social, and political differences.

This diverse region falls under the mandate of the UN Commission for Latin America and the Caribbean (ECLAC), which was created to contribute to regional integration, and to economic and social development in Latin America and the Caribbean.

Regional monitoring and evaluation of the Millennium Development Goals (MDGs) has been carefully carried out by ECLAC, working in collaboration with other agencies inside the UN system. In 2005 and 2010, respectively, ECLAC published reports on the advances and difficulties related to the achievement of the MDGs; in addition, ECLAC prepares annual thematic reports on poverty, health, gender, and environmental sustainability.

As a general conclusion, it can be stated that the MDGs succeeded in awakening the global conscience on questions of development and the need to eradicate extreme poverty. They also influenced the development agenda in Latin America and the Caribbean, as evidenced by the acceleration of progress since 2000. This is particularly relevant in a region in which inequality and poverty remain major challenges.

Two-and-a-half years ahead of the 2015 deadline for achieving the MDGs, there are three important points of progress since 2000. This is particularly relevant in a region in which inequality and poverty remain major challenges.

In Latin America and the Caribbean—where regional progress overshadows intranational differences—covering development heterogeneity is key.
Furthermore, the “partnership for development” specified by MDG Goal Eight has not been established due to a lack of commitment from developed countries regarding the creation of an international trade and financial system that would allow for a fairer development process.

As a whole, the Latin America and the Caribbean region appears to have a more advantageous position in comparison with other developing areas of the world. However, the disaggregated analysis (between and within individual countries) reveals large disparities. These include inequalities in the distribution of income.

On one hand, in the past two decades, the number of people living in poverty in Latin America and the Caribbean has decreased from 48.4% in 1990 to 30.4% in 2011. Extreme poverty, or destitution, decreased by nearly ten percentage points, from 22.0% in 1990 to 12.8%, respectively. Employment increased in quantity and improved in quality.

On the other, however, it must be noted that progress of countries with lower per-capita incomes has been slower than that of the more developed states in the region. In countries where poverty is highest (Plurinational State of Bolivia, Guatemala, Honduras, Haiti, Nicaragua, and Paraguay), advances between 2008 and 2011 were limited, and difficulties are anticipated in achieving MDG Goal One.

Overall, the past twenty years have been good to the region. So much so that there has been an unprecedented improvement in income distribution, thanks to redistributive policies and a better sharing of earnings. For the first time in history, inequality is down and the Gini coefficient (a statistical measure of income distribution) is up in 18 countries.

The global economic crisis that exploded in 2008 applied a brake to the rhythm of advancement toward the MDGs. Palliative measures introduced in 2009 helped encourage growth and generate jobs, but the region faces two important challenges: high informality and low productivity.

There are differences in terms of the existing financial situations in the region’s countries, but some, particularly in the Caribbean, face severe restrictions that will make funding social policies difficult. In addition, it is expected that there will be a decrease in official development assistance, which will affect the poorest countries in particular.

It is clear that efforts must continue in order to meet the MDGs.

ECLAC has sought to identify best practices and successful experiences that have been used to achieve the MDGs in the region. Among them are the conditional cash transfer (CCT) programmes in operation in 18 countries, covering 19.3% of the region’s total population and benefiting more than 25 million families (113 million persons). These programmes required an average investment of just 0.4% of each country’s gross domestic product, according to 2009 figures. It is clear that the transfers are insufficient to overcome poverty in a sustainable way. To do so requires implementing new public policies and instituting structural change. But they represent a step forward.

In any case, there is great uncertainty surrounding the economic situation of the next two-and-a-half years (until 2015), which has made the task of accelerating the advance toward the achievement of the MDGs more complicated.

**MDGs and the media in Latin America and the Caribbean**

In media coverage of the MDGs in Latin America and the Caribbean, there is a tendency to treat topics related to the MDGs with depth and frequency but without necessarily referring to the acronym itself or to the commitment declared by world leaders in 2000.

The media reproduces a large amount of information originating from various actors, such as the UN, national...
governments, and civil society. Often, this information is gathered via informative reports, the celebration of international advocacy days, or declarations made by specialists.

Community media, independent media, and even international news agencies have given more and more mention in their coverage to development themes such as poverty, gender inequality, and environmental sustainability, associating them with the achievement of the MDGs.

However, few journalists make the effort to provide specialised coverage of the MDGs or delve into the reality that is hidden, for example, behind statistics of national averages. In Latin America and the Caribbean—where regional progress overshadows intranational differences—covering development heterogeneity is key.

In the past few years, there has been a regional effort to strengthen the capacity of local governments to address the MDGs, but there has been only fledgling coverage of this programme’s results in the media.

It is important to sensitise media professionals about the need to improve the quantity and quality of coverage of the MDGs in Latin America and the Caribbean, which should include articles reflecting the everyday struggles of the region’s people. Doing so will help encourage societies and decision-makers in Latin America and the Caribbean to prioritise the MDG agenda.
The United Nations Economic Commission for Europe’s (UNECE) membership consists of 56 states in Europe, the Caucasus, Central Asia, and North America. The region as a whole is characterised by high levels of economic and human development. However, the regional averages on Millennium Development Goal (MDG) progress mask considerable disparities between countries and within countries. Therefore, making economic growth more inclusive and sustainable, and adopting social protection systems and policies that reduce social and economic gaps is an imperative for all countries of the region.

The number of UNECE countries expanded considerably during the post-1990 period, which saw the break-up of three federations in the region (Soviet Union, Yugoslavia, and Czechoslovakia) followed by the formation of new nation states. These newly independent states, as well as other former communist countries and Turkey, are considered to be UNECE emerging market economies. They gather 10 post-communist EU member states (NMS), 12 post-Soviet states in Eastern Europe, the Caucasus and Central Asia (EECCA), and 7 states of South-Eastern Europe (SEE). Some 472 million people live in the 3 sub-regions, including 102 million in the NMS (including 38 million in Poland), 276 million in the EECCA (of which 142 million live in Russia), and about 94 million in the SEE (including 72 million in Turkey).

1 More information on the MDGs in Europe and Central Asia, including access to the UNECE MDG reports and online MDG database, can be found at www.unece.org/why/mdg/in-the-unece-region.html. A number of national MDG reports can be found on various UNDP websites, including http://hdr.undp.org/en/reports/search?k=MDGs_and_international_cooperation:MDGs&orderby=year&lang=en&y=*&c=n&p=1
The UNECE 2011 report on the Millennium Development Goals finds that despite having achieved relatively low levels of extreme poverty and nearly universal access to primary education, a number of emerging economies in the region are still faced with the challenge of improving outcomes in the following areas: gender equality, child and maternal mortality, HIV/AIDS and tuberculosis, and environmental sustainability. In addition, some of these economies have to improve significantly the quality of education in order to increase potential growth of national income. Advanced economies of the region need to intensify their efforts to contribute to a global partnership for development. Key obstacles to more rapid MDG progress in the region include slow growth of employment and productivity, uneven distribution of income, and social exclusion of vulnerable population groups, such as the Roma in Europe and indigenous populations in Europe, Central Asia, and North America.

Key obstacles to more rapid MDG progress in the region include slow growth of employment and productivity, uneven distribution of income, and social exclusion of vulnerable population groups, such as the Roma in Europe and indigenous populations in Europe, Central Asia, and North America.
The press and the MDGs in the UNECE region

The press coverage of MDGs in Western Europe is far from satisfactory. So-called “progressive” or “left-leaning” newspapers tend to focus almost exclusively on MDG issues in remote developing countries while ignoring, to a large extent, the poverty, social exclusion, and health issues closer to home, i.e. in post-communist EU member states, and transition economies in Eastern and South-Eastern Europe, the Caucasus, and Central Asia. In contrast, the “reactionary” or “right-wing” press contributes significantly to the creation and perpetuation of negative stereotypes of socially excluded groups such as the Roma, poor migrants, and displaced persons. Such stereotypes undermine the MDG progress achieved to date and prevent disadvantaged groups from accessing good jobs, decent education, and adequate health services. Last but not least, the coverage of MDGs in “mainstream” media usually consists of short reports on achieving various MDG targets at the global level. The reporting of MDG-related issues in Europe (e.g. the plight of the Roma) in the “mainstream” press is balanced but not frequent.

As far as the emerging economies of Europe and Central Asia are concerned, there is hardly any objective press coverage of MDG issues. Similarly, as in the Western boulevard press, marginalised groups are usually portrayed negatively as criminals or social parasites without any attempt to analyse their problems or search for equitable solutions. Moreover, the media in a number of emerging economies in Europe and Central Asia are subjected to various restrictions that make meaningful reporting on MDG issues practically impossible (e.g. in some of these countries governments regard any information about social problems of disadvantaged minorities as subversive because it could, allegedly, threaten national unity, etc.). Generally, the freedom of the press in the region seems to correlate with the success of transition from central planning and one-party rule to markets and representative democracy.

In conclusion, the press coverage of MDG issues in Europe and Central Asia should become more comprehensive in the sense that it would accurately describe relevant facts and trends, provide an analysis of underlying factors, and contribute to the achievement of internationally agreed targets.

Free press, or more generally independent media, provides society with the access to uncensored information that enables it to hold governments accountable for their actions. It is also considered to be a universal human right that should be respected by all UN members. The path-breaking Human Development Report of 1990 began with a definition of human development as a process of ‘enlarging people’s choices’. Such choices should be informed.
The MDGs in Africa: Reporting on the MDGs—It’s in Our Own Best Interest

**UN Economic Commission for Africa (UNECA)**

Less than three years before the 2015 target deadline for achieving the Millennium Development Goals (MDGs), it is common to note that Africa might not achieve most of them.

The UN Economic Commission for Africa’s (UNECA) MDG Report 2012 states that while Africa’s progress toward the MDGs is ‘gaining momentum’, the continent remains off-track on more than half of the goals. In sub-Saharan Africa, $1.25-a-day poverty declined from 56.5% to 47.5% between 1990 and 2008, but child malnutrition and maternal mortality rates are not improving quickly enough. In areas where partial successes can be claimed—such as gender equality and universal primary education—significant challenges remain.

What comes next is anyone’s guess, but what we can expect is that the post-2015 agenda will revisit the MDGs and recast them in view of present-day development realities.

On the other hand, emerging issues, such as sustainable development, human development and security, climate change, and food security have become central to current development thinking.

In this light, UNECA, together with the African Union Commission (AUC) and the United Nations Development Programme—Regional Bureau for Africa (UNDP-RBA) have indicated consensus for an “MDG plus” agenda.

Within this context, it is essential that information and communication goals, such as freedom of expression, access to new information and communication technologies, and the promotion of democratic values, assume their rightful place. These aspects, although they were not taken into account when the MDGs were agreed upon in 2000, are central to creating the environment necessary to meeting MDG targets.

**MDGs as sources of news ideas**

From the point of view of a newsroom reporter, the list of MDGs offers an inexhaustible news agenda for all who want to engage in detailed and sustainable coverage of Africa’s development agenda.

More importantly, writing about specific MDG targets helps to keep stakeholders accountable for their commitments and can help give journalists critical experience in writing good economic and development stories.

Writing about specific MDG targets helps to keep stakeholders accountable for their commitments and can help give journalists critical experience in writing good economic and development stories.
Development planners have often faulted African editors for not doing enough to support development initiatives on the continent. During a recent media workshop organised by The New Partnership for Africa’s Development (NEPAD), an official challenged the media on its believed lack of development stories:

‘How do you in the media explain the fact that your newspaper columns are sléw with sports and political rallies, when nothing is written about the hundreds of rural women in our countries who die each month while giving birth? Why is it that you reporters are not interested in the thousands of girls who drop out of primary school each year?’

Holistic approach

The official raised some serious and legitimate concerns. Take, for example, the continued tragedy of rural women who die during childbirth. News reports about the topic, especially in resource-poor countries, such as Niger or Burkina Faso,1 would unfortunately hardly ever make it to the front page of the national newspapers.

Even if a story did manage to raise awareness, however, in order to have a chance of contributing towards addressing the issue of high maternal mortality within the respective community, it would have to address factors influencing fertility rates, as well as an array of other development problems, ranging from the lack of timely medical attention for women in labour to transportation from their homes to an equipped health facility. The 2012 MDG Report notes, for instance, that ‘almost one in four women in Africa who wish to space or delay their next pregnancy cannot do so because of lack of access to contraceptives’.

Additionally, there is the issue of availability of trained medical personnel to proceed with a Caesarean section, if needed, to save the life of the woman and possibly that of her baby.

If a news story touches on all or most of these problems and the government is responsive to public opinion, then the story could have an impact on maternal mortality after the necessary investments are made.

While there are plenty of other examples related to different MDG targets, what is important is that the media realise that it has a substantive role to play in the implementation of the MDG commitments that goes beyond the simple reiteration of press releases on different development projects.

A combination of news reports, graphics, and outdoor and modern multimedia initiatives is much more likely to elicit positive reaction and commitment to work towards achieving the MDGs than a basic news transmission.

Seeking the right story angle

The rest is about how to get the right angle on a particular story. Capturing the right perspective is important for ensuring that development reporting helps to keep governments accountable and contributes to meeting the MDGs.

Journalists should always bear in mind that the ultimate purpose of a good news story on the MDGs is, as much as possible, to elicit a response—positive or negative—from the different audiences and constituencies with a stake in the MDGs, including local communities, the primary beneficiaries of development.

- Cultivate the desire and ability to assess progress in a constructive manner
- Develop the ability to identify challenges
- Find out what it would take for the government, the donors, and the international community, respectively, to achieve each one of the goals
- Achieve a clear understanding of the MDGs and their targets

1 The Maternal Mortality Ratio in these countries is 500 and 200 per 100,000 live births, respectively (Source: www.data.worldbank.org).

For example, developed countries often place conditions on development assistance designed to foster achievement of the MDGs. On the occasion of the signing of such loan agreements, it would make sense for reporters to go beyond the actual event and undertake an investigative report or write a series of stories on the impact of the loans on the locals. Of course, it is also a good idea for journalists to cover in depth the negotiating phase of such loan agreements rather than just coming in to report on the signing ceremony.

Also among the objectives of the MDGs is empowering women. Though there has been notable progress in the primary education rates of girls and representation of women in national parliaments, levels of domestic abuse and sexual violence remain high, and are even on the rise in some countries. Unfortunately, these latter issues get treated in the local media as simple misdeeds, rather than as obstacles to development.

Similarly, journalists can focus on honest governmental efforts to stem HIV transmission, even when infection rates in a particular country remain high. Positive publicity can help bring critical development assistance in what the MDG Report 2012 called an “uncertain funding environment”, despite progress in key HIV indicators across Africa.

**MDGs and diplomacy**

Focused reporting on international relations related to the achievements of the MDGs is a valuable niche that the African media has yet to explore. After all, the development of newspapers and broadcasters is invariably a function of the social and economic conditions of the people they serve.

Global links and pressures play an important role in the MDGs. Following the adoption of the MDGs, many international organisations began to judge the seriousness of African governments with regards to the attention the latter paid to their AIDS-fighting programmes. In fact, some organisations made debt cancellation “conditional” on progress in the fight against HIV/AIDS and the promotion of universal primary education.

Each year, $50 billion is believed to be illegally taken out of Africa and stashed away in developed countries. That figure is higher than the average total Official Development Assistance (ODA) that Africa receives annually from the international community, including China. That money would be enough pave roads, build health centres, train nurses and midwives, and provide free primary education to millions of children across the continent.

At a media workshop ahead of the Eighth African Development Forum (ADF VIII) in October 2012, representatives of the UN Economic Commission for Africa, using the tagline “Track it. Stop it. Get it”, urged journalists to investigate the flow of illicit funds from Africa, emphasising the link between media and citizen empowerment.

**News from annual economic reports**

The news media mostly covers the MDGs when a new report is launched or when there is a meeting or visit by development officials. However, even this coverage tends to be just a summary of the event, focusing on the speeches, with just a few lines on the actual report findings. In any case, there are plenty of other sources for reporters to find information on the MDGs.

UNEA, together with development partners such as the AUC and the African Development Bank (AfDB), publishes a yearly report that assesses performances by African countries relative to different MDG targets. There are other sectoral reports also published by other UN agencies. Similarly, UNECA produces several reports each year on different development themes; some of the most recent ones are highly relevant to the MDGs.

These sources all provide a wealth of information and take relevant MDG targets as a starting point. These reports contain facts and figures that are often easily forgotten after the launch ceremony, but that could inspire dozens of effective news stories.

Another important place to look is the African Statistical Yearbook, a joint publication of UNECA, the AUC, and the AfDB. Pick any edition of the Yearbook, and be surprised by the number of new story ideas that could be developed from the numerous figures!

Ultimately, whatever the challenges the media might face in its effort to report on the MDGs, the trouble is worthwhile. After all, the development of newspapers and broadcasters is invariably a function of the social and economic conditions of the people they serve.

In covering the MDG goals, African reporters and editors have the chance to motivate, guide, inspire, and hold-accountable governments, donors, and international organisations who committed to the MDGs. But writing about the MDGs is not a just a chance for journalists to promote development initiatives—it is also in their own best interest.

Ultimately, whatever the challenges the media might face in its effort to report on the MDGs, the trouble is worthwhile. After all, the development of newspapers and broadcasters is invariably a function of the social and economic conditions of the people they serve.
I. MDG achievement in the Arab States

Review of progress of Arab States needs to be undertaken within the understanding and context of a region that is at a crossroads in a period of unheralded transition.

The Arab Millennium Goals Report 2011 is the most recent and comprehensive assessment of progress to date for the region.

The report states that due to different levels of human development (and income) and diversity in the region, an assessment of progress using specialised criteria is necessary. It is for this reason that the report assesses the current status of Millennium Development Goal (MDG) attainment in four major subgroups, with countries living under special and difficult conditions related to occupation, war, and conflict added in a separate subgroup:

1. The Gulf Cooperation Council (GCC)
2. The Mashreq
3. The Maghreb
4. The Arab Least-Developed Countries (LDCs)
5. Countries living under special and difficult conditions related to occupation, war, and conflict

In addition, the report aligns MDGs with on-going transition in the Arab region, researches the correlation between development goals and the political transition, and outlines a subjective correlation between both.

It states that although the MDGs did not inspire demonstrations and protests across the region, they are reflected in the issues and slogans central to them, quoting Freedom, Justice and Dignity as recurring calls by protestors in these countries.

In assessing progress to date, the report outlines priority action areas ahead of 2014.

GCC countries

The priority for higher-income countries, such as the GCC, includes the need to adapt MDGs at the national level and to set development goals, achievement levels, and indicators compliant with national characteristics and agendas. This is especially applicable for MDGs One, Two, Four, Five, and Six, where there are advanced levels of achievement almost comparable to advanced industrial countries. In terms of existing gaps and problems, priority should be given to the third goal, related to the empowerment of women, and to the seventh goal, related

---

(8) The MDGs in the Arab States: A Region at a Crossroads

UN Economic Commission and Social Commission for Western Asia (UN-ESCWA)

---

to environment and sustainability. Also, the eighth goal is of importance regarding the establishment of a regional cooperation strategy for development, the achievement of the MDGs in Arab countries, and for the GCC countries to play a regional role in this field. In addition, GCC countries need to address the issue of economic diversification, labour market problems, and economic and social sustainability from a strategic and long-term perspective.

**Mashreq and Maghreb countries**

The report outlines priorities for middle-income countries of the Mashreq and Maghreb, which include the need to adapt the MDGs at the national level, and set achievement goals and levels, as well as indicators, that are consistent with national characteristics and priorities. Adaptation should include qualitative aspects and specify higher levels of achievement, particularly where education—a focus issue for the group—is concerned. Within education, (and in Morocco in particular) there are diverse problems related to quantitative gaps in enrolment and to poor internal performance.

The priorities of adaptation regarding other goals vary according to each country. In terms of existing gaps and problems, priority should be given to the first goal, ideally by targeting unemployment, the right to decent work and poverty alleviation (which is strongly linked to problems of regional and social disparities). The third goal, related to empowerment, and the seventh goal, related to environment and sustainability should also take precedence. Regarding health and education, the priority is health coverage and the cost of education, in addition to the issue of non-contagious diseases.

**Countries living under special and difficult conditions related to occupation, war, and conflict**

The report notes that countries living under special and difficult conditions related to occupation, war, and conflict generally suffer from problems including (i) human and physical losses resulting from war or military acts, (ii) resource scarcity, (iii) glaring disparities in priorities set globally based on the MDGs framework, and the priorities of the region under conditions of conflict of occupation, (iv) weakness or instability of institutions hampering planning and executive aspects of the development process, (v) severe internal polarisation between the social classes or between regions, rendering building
alliances for development difficult, and (v) suffering from weaknesses, fragmentation, or even an absence of the government capacity to control national resources. Revisiting the current development framework In the medium to long term, the report proposes to revisit the current development framework and set in motion the much-needed political and governance reforms in the region by:

1. Including governance reform as a key driver and manifestation of development success based on participation, accountability, and institutional effectiveness, as demanded by the Arab popular uprisings;
2. Including sub-national inequality as a key driver and manifestation of development failures by disaggregating data on the development goals according to gender, geography, minorities, and income groups, among others;
3. Including measures to monitor quality of services on health and education as opposed to merely using quantitative aspects;
4. Rethinking poverty monitoring by redefining poverty measurements to truly reflect the national contexts based on national multi-dimensional poverty measures and on national poverty lines;
5. And adopting a nationally tailored approach to setting the global goals, so that they are context specific.

The report argues that a new, nationally driven development framework will better provide the critical means that targeted Arab countries.

This was reflected in the media’s coverage of MDGs in a segmented and fragmented way, both at a country and regional level. Initial emphasis was placed on isolated goals mainly education, maternal health, CO2 emissions, etc., whereas the MDGs ought to have been treated as one integrated package, incorporated as a whole into national development plans. This approach is aimed at achieving a holistic and cross-sectoral approach to the MDGs, and that were subject to criticism throughout these activities, the interaction between media figures and other partners was very helpful as partners and full participants in the activities of the MDG process in the Arab Region. By contributing to advocacy and monitoring efforts, and by promoting awareness of the high-level official political representation at the meetings. However, the approach to the MDGs remained limited, which affected the media coverage, focusing on certain economic constraints adopted at the summits, consigning the social aspect—MDGs included—to a secondary position, both at the summits and in the media.

Involving media in the MDG process

The media coverage of the MDGs, then, is mostly focused on news and activities. However, the Arab Region was characterised by several initiatives that encouraged the involvement of media institutions and journalists as partners and full participants in the activities of the MDG process in the Arab Region. By contributing to advocacy and monitoring efforts, and by promoting awareness of the high-level official political representation at the meetings. However, the approach to the MDGs remained limited, which affected the media coverage, focusing on certain economic constraints adopted at the summits, consigning the social aspect—MDGs included—to a secondary position, both at the summits and in the media.

III. Closing remarks

There is a regional initiative that illustrates best the cooperation between international organisations, journalists, and CSOs. An on-going common regional project was launched at the end of 2005, and in this context a relatively large number of training workshops was held with the participation of international organisations, journalists and participants. The project produced MDG training material that targeted journalists and media officers in CSOs (and others). The first part of these activities (between the years 2005 and 2008) included 12 training workshops that gathered 255 participants from 20 out of 22 Arab countries. Media representatives accounted for 12 percent of these participants. Out of these 12 workshops, three used the media and MDG training unit.

By contributing to advocacy and monitoring efforts, and by promoting awareness of the MDGs and a public demand for their adoption, the media could be pivotal in enabling MDG achievement in the region.

By contributing to advocacy and monitoring efforts, and by promoting awareness of the MDGs and a public demand for their adoption, the media could be pivotal in enabling MDG achievement in the region.
communities in this direction. None of this can be achieved without the media. It also goes without saying that media plays a big role in monitoring, follow-up, critical examination, accountability, and transparency.

Media outlets and figures must, therefore, be regarded as partners with full rights and duties, alongside their role of traditional journalistic coverage. This also means finding a new balance between the role of journalists in the coverage of a given event, their role in examining the background, the underlying reasons behind each event and the problems it mirrors, their commitment as citizens to human rights and development goals, and their efforts as individuals, through the institutions they work in, to promote their part in building a development culture and effective citizen awareness of development achievement.

UN Economic and Social Commission for Western Asia
Riad el-Solh Square
Beirut, Lebanon

www.escwa.un.org

Media outlets and figures must, therefore, be regarded as partners (in MDG achievement) with full rights and duties, alongside their role of traditional journalistic coverage.
The Asia and Pacific region has taken big steps in reducing poverty and is moving fast towards other development goals. But it still has high levels of hunger, as well as child and maternal mortality, according to the latest assessment of regional progress towards the Millennium Development Goals (MDGs) published by the United Nations Economic and Social Commission for Asia and the Pacific (ESCAP), the Asian Development Bank (ADB), and the United Nations Development Programme (UNDP).

The region has already met the first target included in MDG Goal One—to halve the incidence of poverty, reducing between 1990 and 2009 the proportion of people living on less than $1.25 per day from 50 to 22 per cent. It is also on-track to meet some other MDG indicators ahead of the target year of 2015—including promoting gender equality in education, reducing HIV prevalence, stopping the spread of tuberculosis, increasing forest cover, reducing consumption of ozone-depleting substances, and halving the proportion of people without access to safe drinking water.

While dynamic economic growth has driven the region’s success in poverty reduction, even the fast-growing Asia-Pacific countries continue to have high levels of mortality for children under five years old. Across the region, over three million children died before their fifth birthday in 2012 alone. Moreover, thousands of mothers continue to die annually from causes related to childbirth.
Though the number of people without access to potable water in the region fell from 856 million to 416 million between 1990 and 2008, the Asia-Pacific region still accounts for more than half of the world’s population lacking safe drinking water.

The ESCAP/ADB/UNDP Asia-Pacific MDG Report 2011/12, entitled “Accelerating Equitable Achievement of the MDGs: Closing the Gaps in Health and Nutrition in Asia and the Pacific”, warns that at the present rate of progress, the region as a whole is unlikely to meet MDG targets related to eradicating hunger, reducing child mortality and improving maternal health, among others.

Half of the region’s countries found to be off-track in terms of child mortality can reach the MDG target by preventing just two under-five deaths per 1,000 children annually.

Sharp disparities by geographic location and social group

The report reveals striking disparities between and within sub-regions, countries and even social groups in their progress towards the MDGs. While South Asia as a whole is on track for just nine MDG indicators, Sri Lanka is on track for 15 indicators and outperforms the rest of the sub-region.

Within individual countries, disparities in MDG target achievement among genders, ethnicities, and regions mean that large sections of the population are falling short of development goals.

Why some countries do better

While the report confirms that health spending is important, it also indicates that the quality of health-related services and good governance are just as significant in terms of attaining better health outcomes. For instance, research shows that countries with greater success in curbing corruption achieve better health-related progress.

Other factors, such as women’s literacy and education levels, access to clean water, improved sanitation, and

other issues such as women’s literacy and education levels, access to clean water, improved sanitation, and

...
better roads and other infrastructure also play a crucial role in improving public health.

If governments are to raise health standards, they will have to focus much more sharply on the needs of the poor and vulnerable, the report indicates. Gains in healthcare quality will require interventions not only in the health-care sector, but also, and more importantly, in related domains, such as water quality, nutrition, education, and gender empowerment.

**Fast-tracking progress**

However, the good news is that many of these goals can still be reached by 2015 with a redoubling of effort. For example, the goal of reducing child malnutrition can be met with a less-than-two-per-cent annual improvement in the 14 regional countries currently considered to be off-track.

![An Afghan woman who was allegedly burnt by her male relatives receives medical treatment at a local hospital in Herat, Afghanistan on March 29, 2011. EPA/Jalil Rezayee](image)

Half of the region’s countries found to be off-track in terms of child mortality can reach the MDG target by preventing just two under-five deaths per 1,000 children annually. A number of countries lagging behind in maternal mortality can meet the respective target by preventing two to three deaths per 100,000 live births each year.

The report outlines an eight-point agenda to fast-track progress towards the health-related MDGs: the agenda calls for addressing the social determinants of health inequities and vulnerabilities, establishing an equitable, accessible, responsive and integrated primary healthcare system, and ensuring preventive, promotive, and curative mother-and-child health services.

**Asia-Pacific media coverage of MDGs**

In general, there is too little coverage of the MDGs as such in the mainstream media. While there is mainstream media reporting on development issues—including hunger, poverty, health, and social empowerment—the term MDG is rarely mentioned.

During a recent UN media workshop in Bangkok encouraging coverage of the MDGs, participants noted that many journalists tend to view the MDGs as UN jargon and not able to be easily linked to their news coverage.

Journalists taking part in the workshop, which was held on the eve of the 2012 Asia Media Summit, highlighted the need for access to key stakeholders, including government and institutional actors.

They also indicated that the use of illustrations and statistics, using both localised data and official UN information, were important for producing good stories that would be more likely to reverberate. The journalists noted that “unusual” statistics were particularly useful.

Participating reporters pointed to cost and time in gaining access to subjects, as well as a long interview-approval process at the UN, as specific obstacles to increased MDG coverage.

UN outreach to the media has been effective in raising the visibility of the MDGs in media coverage, as witnessed by the relatively improved coverage in South Asia and in some southeast Asian countries, including the Philippines and Indonesia.

Media interest has been generated through the hosting of special media events, such as the Bangkok workshop; granting one-on-one interviews; and encouraging individual and group media trips to observe UN-supported and government- or civil-society—run MDG initiatives on the ground.

With two-and-a-half years to go until 2015, the deadline to achieve the Millennium Development Goals (MDGs), progress has been mixed. The spread of some diseases, such as HIV/AIDS, is being brought under control. In China, the proportion of people living on under a dollar a day has been halved. At the same time, though, the number of those living on under a dollar a day in sub-Saharan Africa has dropped by a measly one percent.

Why such uneven progress? One reason is trade barriers, poorly understood by those in the global north, that prevent businesspeople in southern regions from competing globally. Another is endemic corruption in developing countries that diverts development aid from its goals.

Both these issues make covering development issues and developing world themes all the more crucial. Northern audiences need to be aware of the impacts of their actions on the south. Southern officials need to know they are likely to be held publicly accountable for their actions. It is only then that the rights and aspirations of poor people will stand a chance against such barriers and corruption.

Many reporters and editors from mainstream media outlets in North America labour under the misperception that southern issues are of little interest to northern audiences. Why, according to this view, should northern reporters care about the MDGs? Yet according to extensive reader surveys carried out by the Toronto Star, Canada’s largest broadsheet newspaper by circulation, the lack of audience for news from the south is a myth.

According to current Star editor Michael Cooke, readers want more world news. As such, the paper launched
Foreign news coverage in Canada or other developed countries can provoke changes in foreign policy that, in turn, might even affect the [local] journalist’s life.

population in Canada that clamours for news from home. It also includes stories that simply explain what is happening in developing countries, and why.

Mary Vallis is one of the editors working on the new section at the Star. In her view, reporters should care about covering stories from Africa in particular because it is simply good business. That is because news, for her, is all about perspective. By writing about how a woman in Africa gives birth at home, she explains, readers can form an immediate contrast to their own experiences in North America’s hospitals and clinics. ‘Immediate contrast,’ she says, ‘has impact.’ And impact generates audience.

The Toronto Star is published in one of North America’s most competitive news markets. Toronto. Nowhere in Canada is the competition stiffer than between the Star and the Globe and Mail, Canada’s national newspaper. Yet reporters and editors at the Globe broadly echo Vallis and Cooke’s sentiments.

According to veteran reporter Paul Koring, covering development or human rights is a simple matter of getting the best story. ‘In authoritarian places, almost everything can be expressed in the powerlessness of the individual,’ he says. ‘Stories about individual rights—or the lack thereof—are what life is all about.’

Business and technology writer Iain Marlow has a slightly more macro analysis. In Marlow’s view, business and politics are truly global nowadays. Supply chains, human rights, and trade all have global angles and global roots. These things matter, Marlow argues, both to Canada’s politics and to its corporations, as well as to Canada’s material well-being and the structural well-being of others in other countries.

Isolated, impoverished countries do not only suffer in their own right; they also fuel domestic, regional and global instability. Moreover, certain stories defy borders. And in some cases, for example when reporting on local corruption in India’s telecom industry, Marlow’s editors judged the story to be of interest to Globe and Mail readers simply on its own merits—as a gripping narrative lending insight into the digital development of the world’s second most populous country.

‘All readers now are global,’ Marlow concludes. ‘The Web gives good stories a life of their own. And in a city like Toronto, we have tons of readers who do business in these countries, and tons of readers who come from these countries. It is of value to all of them for us to report on these countries accurately and thoroughly.’

One point that another Canadian journalist, award-winning freelance writer Christopher Watt, is at pains to stress, however, is that stories on development themes winning freelance writer Christopher Watt, is at pains to stress, however, is that stories on development themes from the global south are often far more expertly reported to stress, however, is that stories on development themes from the global south are often far more expertly reported to stress, however, is that stories on development themes from the global south are often far more expertly reported than by southern journalists writing for northern markets, than by northern correspondents on short visits. ‘A great deal of foreign reporting generated by Canadian reporters overseas is actually generated by fixers,’ Watt says. ‘They do the real work.’

Not only is the southern journalist at an advantage because of his or her local knowledge, Watt argues, he or she also can more frequently and more expertly provide appropriate local context for a story. This helps prevent embarrassing mistakes. ‘A recent item in one Canadian paper described a “drinking dispute” in a certain neighbourhhood in Istanbul,’ Watt says. ‘I called this neighbourhhood home for several years and therefore knew that the dispute has existed for at least a decade. It was of dubious news value, and had nothing to do with “drinking”’

What local journalists need to bring to the fore, Watt concludes, are things foreign editors themselves do not know. He or she then needs to identify stories that are likely to appeal to that editor’s audience.

Despite the views of those reporters and editors queried above, astounding gaps in foreign coverage still remain, thanks in part to shrinking advertising dollars and smaller budgets. It is these gaps that local reporters in the south are well poised to exploit.

The consequences of a local journalist in the south being able to do just that are significant. Foreign news coverage in Canada or other developed countries can provoke changes in foreign policy that, in turn, might even affect the journalist’s life. That is the kind of power journalists writing for northern audiences should seek to leverage. After all, the capacity to wield it is often but an e-mail address away.

Rachel Pulfer is the executive director of Journalists for Human Rights (www.jhr.ca). A print journalist of 10 years’ standing, her last position was as the U.S. correspondent, editorial board member, and columnist for Canadian Business—Canada’s national businessnewsmagazine. In 2009-2010 she was a Canadian Journalism Fellow at Massey College, University of Toronto. In addition to her work at JHR, Rachel also works as a contributing editor for Corporate Knights, a Toronto-based magazine focused on corporate social responsibility. She has freelanced for publications ranging from The Walrus to Toronto Life, and has been nominated for three National Magazine Awards for feature writing and the editing of editorial packages.
Investigative journalists and other citizens interested in uncovering the organised crime and corruption that affect the lives of billions of people worldwide gain, with each passing day, unprecedented access to information. However, corrupt officials in governments and organised crime groups are doing their best to conceal information and to hide their wrongdoings. They are making efforts to keep people in the dark, while they continue to commit crimes that may have huge impact on society, causing disruptions such as conflict, famine or various types of humanitarian crisis. It is the duty of investigative journalists to uncover such wrongdoings and to play an active role in deterring corrupt officials and criminals in their criminal acts.

There are three main principles that, if followed, can lead to good, thorough, journalism when investigating major acts of corruption and crime, even in the most austere of environments:

1. Think outside your country

In many instances, it is much easier to get information from abroad than from within the country where the investigative journalist lives. Information gathered from abroad via foreign information databases or by using other countries’ access to information laws might be just what is needed to put the investigative puzzle together. On top of that, criminals and corrupt officials do not keep their money in the place they stole it from. They would rather deposit it in foreign banks, or they would rather invest in other countries. Crime is global.

Investigative journalists and other citizens interested in uncovering the organised crime and corruption that affect the lives of billions of people worldwide gain, with each passing day, unprecedented access to information. However, corrupt officials in governments and organised crime groups are doing their best to conceal information and to hide their wrongdoings. They are making efforts to keep people in the dark, while they continue to commit crimes that may have huge impact on society, causing disruptions such as conflict, famine or various types of humanitarian crisis. It is the duty of investigative journalists to uncover such wrongdoings and to play an active role in deterring corrupt officials and criminals in their criminal acts.

There are three main principles that, if followed, can lead to good, thorough, journalism when investigating major acts of corruption and crime, even in the most austere of environments:

1. Think outside your country

In many instances, it is much easier to get information from abroad than from within the country where the investigative journalist lives. Information gathered from abroad via foreign information databases or by using other countries’ access to information laws might be just what is needed to put the investigative puzzle together. On top of that, criminals and corrupt officials do not keep their money in the place they stole it from. They would rather deposit it in foreign banks, or they would rather invest in other countries. Crime is global.

2. Make use of existing investigative journalism networks

Investigative journalists all over the world are grouped in organisations such as:

- Organized Crime and Corruption Reporting Project: www.reportingproject.net
- African Forum for Investigative Reporting: www.fairreporters.org
- Arab Reporters for Investigative Journalism: www.araj.net
- Global Investigative Journalism Network: www.gijn.org

And these are just a few of such organisations. Many of the reporters in such networks work on similar issues and confront similar situations, so it makes a lot of sense to exchange information and methods. E-mail lists are attached to these networks, so it is quite easy to get in touch with fellow journalists and to ask for information or advice. Investigative story ideas can also be gathered from such forums and e-mailing lists.

3. Make use of technology

Software can help investigative journalists cut through the noise and through the large volumes of what seems

Databases that assist the investigative journalist in tracking money worldwide can be found in a myriad of places on the Internet such as:

- www.investigativedashboard.org/category/wwd
- www.opencorporates.com
- www.ohan.net

(11) Investigative Journalism: It’s All About Cross-Border Cooperation
Paul Christian Radu

Burmoes weekly newspapers are prepared for distribution at a printing house in Yangon, Burma in March 2012. Burma lifted a law on media censorship in 2012. EPA/Thet Htoo
Khadija Ismayilova is an Azeri investigative reporter working for Radio Free Europe/Radio Liberty’s (RFE/RL) Baku-based office. She works in a very austere environment when it comes to accessing information and has had to overcome lots of obstacles in order to offer the public good and reliable information. In June 2011, Ismayilova revealed that the daughters of Azeri President Ilham Aliyev secretly run, through Panama-based offshore companies, a fast-rising telecom company called Azerfon. The company boasts nearly 1.7 million subscribers, covers 80 percent of the country’s territory and was, at the time, Azerbaijan’s only provider of 3G services.

The RFE/RL reporter spent three years trying to find out who were the beneficial owners of the telecom company, but the government refused to disclose shareholder information and claimed that the company was owned by German-based Siemens AG, an assertion that has been flatly denied by Siemens. They even claimed that the company was owned by German-based Siemens AG, an assertion that has been flatly denied by Siemens. Ismayilova managed to find out that Azerfon was owned by a few Panama-based private companies, and this seemed to be a dead-end to her reporting until help from outside was employed. In early 2011, she learned through the Investigative Dashboard—a free-of-charge initiative to assist journalists in investigating organised crime and corruption—that companies in Panama can be tracked down through a software programmer-generated application developed by Scottish programmer and activist Dan O’Huiginn. It was then that she finally managed to uncover the fact that the president’s daughters were involved with the telecom company through Panama-based entities.

Panama, a well-known offshore haven, has been allegedly used by corrupt officials from all over as a place to hide stolen money—from cronies of former Egyptian president Hosni Mubarak to businesses in credit cards and diaspora remittances.

In fact, O’Huiginn created a tool that helped journalists from all over the world to report on corruption. What the programmer-activist has done is called web scraping, a method that allows the extraction and reshaping of information, so it can be used by investigators. O’Huiginn scraped the Panama registry of companies, because this registry, although open, only allowed searches if the investigative reporter knew the name of the commercial company he or she was looking for. This limited the possibility to investigate as usually reporters look for names of persons in order to track down their assets. The programmer extracted the data and created a new website on which name-based searches are also possible. The new website has allowed investigative reporters in many countries to fish for information, so run names of government officials and parliamentarians, and to check if they secretly owned corporations in Panama just as the family of the Azerbaijani president did.

The use of the investigative tools mentioned in this chapter is highlighted by the following example:

There are many different concepts and definitions of poverty. According to the Oxford University Poverty and Human Development Initiative, ‘Poverty is often defined by one-dimensional measures, such as income. But no one indicator alone can capture the multiple aspects that constitute poverty. Multidimensional poverty is made up of several factors that constitute poor people’s experience of deprivation—such as poor health, lack of education, inadequate living standard, lack of income (as one of several factors considered), disempowerment, poor quality of work and threat from violence.’

Experts have set up “poverty lines” to measure the minimum level of poverty, which may differ according to the local context. The World Bank notes: ‘What is necessary to satisfy basic needs varies across time and societies. Therefore, poverty lines vary in time and place, and each country uses lines which are appropriate to its level of development, societal norms and values.’

But regardless of which definition one chooses to use, it is clear that eradicating extreme poverty remains one of the modern world’s greatest challenges. Even in developed countries, amidst incredible wealth, millions of people—especially youth, immigrants, and people of colour—struggle to have their basic needs met.

1 www.ophi.org.uk/policy/multidimensional-poverty-index/  

One Problem, Many Dimensions: Tips on Covering Poverty
Jean Claude Louis
The Millennium Development Goals (MDGs) have given the media an opportunity to expand their coverage and to hold governments and stakeholders accountable. Development work aimed at alleviating poverty is also a fertile area around which to create newspaper reports that highlight the enrichment of people’s lives through success stories. Nonetheless, in poverty-stricken countries that lack a freedom of information act—which compels governments to release certain information upon request—it will not always be easy for journalists to cover development aid or access accurate data on poverty.

Often, however, the first barriers are newsrooms and media owners. Covering poverty requires dedication to and interest in the human dimension, as well as lots of follow-up stories, so both the journalist and the editor must be committed. They have to remind themselves that coverage of any poverty-related topic, be it infant mortality or lack of access to education, needs discerning, multi-faceted stories that reveal the deeper causes of poverty.

Some practical tips on covering poverty:

Find out who attends school: How does poverty affect children’s health and ability to learn? Find out what their parents do for a living and what correlations this may have. Consider whether parents have the time and skills to help children with their homework. What about the teachers? Are they trained? Can they live off their salaries? Remember that the basics—such as having enough food to eat or clothes to wear—can greatly affect a child’s education. Children who come from poor families are more likely to abandon school early and are less likely to be prepared when they do.

Give voices to the children: Children are good message carriers and can mobilise on issues that affect them and their community. They can communicate well without any judgment and reserve.

Pay attention to people released from prison: Former inmates are often among the poorest of the poor. Think about what is being done to help them return to society. Are they getting help to find a job? Were there education opportunities in prison? What type of health-care is provided while behind bars? Due to poor conditions, prisoners may contract HIV, TB, or hepatitis and, without proper counselling, may pose a risk to society when released.

Follow the money: Think about informal sectors of the economy. Where do street merchants, for example, find loans? From banks? From loan sharks with predatory interest rates? Take a look at the relationship between commercial banks—which normally cater to people that already have some degree of wealth—and poor people. Do these banks make themselves accessible? Do they have initiatives to help poor people build financial stability? Look into the possibilities related to micro-credit institutions.

Find out the goals and limitations of non-profits: Remember that they can help but cannot solve all the problems. Find out exactly what their mission is, and then investigate their action. Do they work closely with the government? Do they include members of the community when putting together strategies?

Be aware of people who try to take advantage of poverty: Pay close attention to those elements—whether government or private—who disregard the benefit to society of poverty-reduction programmes, who exaggerate the costs involved, or who promote stereotypes of the poor or minorities. Journalists should carefully investigate accusations against aid programmes for their credibility. Keep a sharp eye on where development money is flowing.

Cultivate official sources: Find dependable sources inside the government to get the most accurate information possible on development aid money and poverty statistics.

Develop real-life stories: Development groups can often provide you with the names and contact information of individuals who are benefiting from a given solution for poverty. Spend time building relationships with these people, who can give you a side to the story you will not get from the government or the non-profits. Remember that their opinion matters, too—what do they think about the programmes supposed to be helping them?

Look for training opportunities: Learn tips on how to present often complex and technical information on health care, HIV prevention, the economics of poverty, budgets, and good governance in ways that the average person can understand and value.

Build good relationships with beneficiaries: Talk to community groups and NGOs regularly to find out about not only ongoing problems, but also new problems that arise from economic, political, or institutional changes that affect the poor.

Look abroad: Donor countries that have freedom of information acts may be able to provide information on funding and aid that one’s own government may refuse. Make contacts with foreign journalists and international organisations that can provide networking and support.

Be proactive in the newsroom: While you might be knowledgeable about development issues, your editor might not. Be your own advocate, explaining why these stories are important and enlisting their support in conducting follow-up reports.

Jean Claude Louis was the Haiti country director for Paxos Caribbean from September 2001 to July 2009. He now works as a freelance consultant while continuing his collaboration with Paxos. With a background in journalism and sociology, he has worked for several non-governmental organisations as a development worker in Haiti. Jean Claude has extensive experience in developing and implementing training courses for journalists. He is a founding member of the Centre of Communication on HIV/AIDS in Haiti and the Haiti Club Press, two journalist networks.

Elderly women beg for money on a sidewalk in Kolkata, India. India’s official poverty rate stands at 28.8 per cent or 350 million people, according to 2010 population figures. EPA/Piyal Adhikary
When stories of a food crisis emerge, it is tempting to ask if the problem stems from the lack of grain. I followed this lead during my early years as a reporter until I read about an event that took place in 1970. That year, the Nobel Peace Prize was awarded to Norman Borlaug. The American agronomist was recognized for his work that combined science and new agriculture techniques to help save millions from hunger. His research—heralding the Green Revolution—paved the way for agriculture built on high-yield outputs.

Borlaug’s efforts to increase cereal production, beginning in Mexico and then, during the 1960s, taking root in India and Pakistan, came at a time of global fear. The media was running stories of the “population bomb”, of agriculture being unable to feed the millions of growing mouths in the developing world, of global instability triggered by the Malthusian nightmare. A near famine in India in 1966 served as a stark warning of bleak times that could lie ahead.

Fortunately, the stories that appeared in the media have moved on from such dire predictions. The foundation that the Green Revolution laid in the agriculture belts across Asia, which has seen rice output triple, paved the way for this shift in the narrative. It was a major milestone in the Asian and the global journey towards food security: agricultural scientists had the answers to boost grain supplies to meet the expanding population. Yuan Longping, China’s leading agricultural scientist, is among the current crop of innovators. The 80-year-old’s new strain of hybrid rice yielded a harvest of 13.9 tons of grain per hectare in 2011, a world record.

Food for Thought: Tips on Covering Hunger

Marwaan Macan-Markar

Yet why is Asia home to 62 percent of the world’s hungry? Why, in 2011, were a further 64 million people in Asia expected to join the existing 600 million people living in absolute poverty on this continent? Why does one still occasionally hear the word “famine” here? Why are 14,000 children dying of hunger every day?

The list of questions for journalists covering the story of hunger in the developing world should not stop there. We should be prepared to look for new leads and new links to expose one of the greatest paradoxes of our time: Why in this age of sufficient food supply does there continue to be food scarcity? Reporters are challenged to shed more light on the food distribution system and the related network of factors—including market mechanisms—that have deprived basic meals to millions in Asia, Africa, and Latin America. And what about tariff barriers imposed by governments to manipulate the price of food?

Each country gives rise to its own set of questions that a curious and enterprising reporter should be drawn to. What are the choke points? Who or what is behind it? Why? The reasons—ranging from land-grabbing, corruption, or political interference—will reveal just how complex reporting about hunger is.

Shifting population trends, with more people moving from rural areas to cities, cannot be ignored either. Researchers have pointed out that a spike in food prices makes those dependent on the cash economy in urban settings more vulnerable than their kin in the hinterlands, who can always tap nature.

We should be prepared to look for new leads and new links to expose one of the greatest paradoxes of our time: Why in this age of sufficient food supply does there continue to be food scarcity?
In Cambodia, for instance, an inquiry to uncover the reasons behind hunger may confirm that the problem has a rural face. And the quest for an explanation may point to a disturbing trend in this Southeast Asian nation still struggling to get on its feet after two decades of conflict: the rampant spread of land-grabbing by powerful companies to convert agricultural land into cash crops, such as sugar plantations. What has made such acquisitions easy, journalists in Cambodia found out, was the lack of land-title deeds, all of which were destroyed during the years of the genocidal Khmer Rouge regime in the 1970s.

In neighbouring Burma, once the world’s leading rice exporter, chronic hunger stems from political obstacles placed in the way of grain being transported from the fields and mills to markets and consumers. Choking the domestic rice-supply root in this country, also known as Myanmar, has been a way for the military dictatorships who have ruled for nearly 50 years to deprive the country’s ethnic minorities of basic foods. Consequently, over 30 percent of children under five years are malnourished and underweight, a number as bad as Cambodia.

Research findings by UN agencies like the Food and Agriculture Organization (FAO) are useful when factors such as high oil prices—which affect the price of fertiliser, pesticides, and the food-transport chain—push food prices up. An enterprising reporter will naturally use this data to dig up more, adding local colour, by sniffing around on the streets. Following the buying habits of people in a local market—how much meat over how much grain, for instance—to establish the extent of the crisis is one route. These micro-moments unfold in other settings too, such as roadside food stalls or restaurants. Interviewing food vendors is helpful to paint a more comprehensive picture of hunger caused by inflation. There, the question that should be asked is: What have people stopped buying?

Some may turn to NGOs and grassroots groups who have chronicled the story of hunger in the communities they work in. Such sources become invaluable when investigating stories in countries where political oppression is palpable. They are the only witnesses a reporter has to depend on to confirm a story of deprivation, as some have done when exposing discrimination faced by ethnic minorities in Laos.

The significance of such reportage has broader political ramifications. It serves as a benchmark to measure how open and democratic a country is. It is an index that combines two freedoms: freedom of the press and freedom from hunger. After all, Amartya Sen, another Nobel Prize laureate, drew a parallel when reflecting on the Bengal famine, in which between 1.5 million to four million people died of starvation, malnutrition, or disease.

‘No substantial famine has ever occurred in any independent country with a democratic form of government and a relatively free press,’ the renowned Indian economist wrote. ‘The Bengal famine of 1943, which I witnessed as a child, was made viable not only by the lack of democracy in colonial India, but also by severe restrictions on reporting and criticism imposed on the Indian press.’

Marwaan Macan-Marsar is a Sri Lankan journalist who covered the South Asian nation’s ethnic conflict for local newspapers before joining the Inter Press Service (IPS) news agency as a correspondent in 1999. He was first assigned to the agency’s World Desk in Mexico City and has since been based in Bangkok, covering Southeast Asia. He has reported from over 15 countries, writing from the frontlines of insurgencies, political upheavals, human rights violations, peace talks, natural disasters, climate change, economic development, hunger and poverty, new diseases like bird flu, and emerging trends in Islam, among other current issues.
Education is the path to development. It creates choices and opportunities for people in terms of access to employment, reduces the twin burdens of poverty and disease, and empowers people. For nations as a whole, education produces a more skilled and competitive workforce that can attract better quality foreign investment, thus opening the doors to economic and social prosperity for society as a whole.

However, people often do not see how these global goals can be translated to local realities. The media plays a key role in forming opinion, helping to ensure that citizens and politicians alike recognise that there is no room for complacency in tackling the Millennium Development Goals (MDGs) related to education (hereafter, MDGs on Education). The media also evaluates progress and highlights areas for improvement.

Here are a number of important tips for journalists who cover education issues, based on interviews with education and media experts.

1. Construct positive and negative scenarios that reflect the impact of meeting/not meeting the MDGs on education

What would happen in your country if all boys and girls completed a full course of primary schooling? How would their lives change? What new opportunities would open up for them? How would society as a whole benefit from this? On the other hand, what would happen if by 2015, the MDGs were not met?
2. Link the MDGs on education to other targets, such as nutrition, health and gender equality

The MDGs should not be seen in isolation, but as part of a series of targets that are inter-related. For example, healthier and better nourished children will be able to perform better in school, and better-educated children will have better employment opportunities, a better income and better chances of breaking the poverty cycle as it will be easier for their children to have access to education. Given that studies have shown a clear link between malnutrition and poor performance in school, it is important to consider whether schools offer free food to children from low-income backgrounds; many countries offer primary school children a glass of milk, cereal, or some sort of nutritional supplement.

Also, increasing the number of girls who are able to complete primary school and produce better-educated mothers who will be positive role models for their children and will help them to succeed in life. Again, articles on education must be linked to other issues such as health, nutrition, and gender equality.

3. Emphasise the link between the MDGs and ensuring basic human rights for all citizens

Education is a right, not a privilege. It is important for readers to understand that access to education is a basic human right, enshrined in the International Covenant on Economic, Social and Cultural Rights (ICESCR), a multilateral treaty adopted by the United Nations General Assembly on December 16, 1966 and in force since 1976. The right to free education is also guaranteed by most countries’ legal and constitutional frameworks.

‘People often blame the poor for their situation and demand that they should pay for primary school education in order to meet the targets. Are resources being spent effectively? How can this be improved?’

Citizens often complain about poor education standards but are reluctant to pay more taxes in order to increase public spending in this area. Journalists’ coverage of education issues must make all citizens (including the private sector) aware of the importance of meeting their fiscal responsibilities if they want to live in a better-educated and more-developed nation.

5. Targets should be approached qualitatively as well as quantitatively

Progress achieved should not only be measured in terms of how many more children are enrolled in primary school. If the number of children enrolled increases, but the education services are of poor quality and the country’s educational infrastructure has not expanded in order to meet the increasing demand, the gap will remain. ‘More Guatemalan children are attending school, but the quality of the education they receive is deficient. To what extent are children and young people really learning?’ asks Verónica Spross, director of Businessmen for Education (Empresarios por la Educación), a Guatemalan non-profit whose aim is to promote better standards in education.

6. Beware of distorted statistics

Official statistics are often presented in a way that seeks to mask reality. Government institutions sometimes present statistics in a way that inflates achievements or underestimates failings.

7. Who teaches your country’s children? What incentives do they receive?

In many countries, teachers are badly trained, and few have reached higher education themselves.

How many teachers have reached higher education? How does the training they receive compare with that of other countries? Does your country’s government offer teachers refresher courses to update their knowledge in specific aspects? Teachers who are badly paid and/or not paid on time are unlikely to perform well. If your country’s teachers barely earn the minimum wage, it says a lot about the government’s priorities in terms of education.

Here are some important indicators that must be taken into account when evaluating progress made in terms of meeting the Millennium Development Goals on education. All of them must be broken down in terms of gender and urban/rural areas, as global statistics can mask gender disparities or exclusion in certain geographical areas.

- **Net enrollment ratio (NER):** the number of children at primary/secondary school age that attend primary or secondary school. This will vary from one country to another, as primary school in some countries is for 6- to 12-year-olds and is for 7- to 12-year-olds in other countries.

- **Gross enrollment ratio (GER):** the total number of pupils attending primary or secondary school (unlike the NER, this includes mature students who are attending primary or secondary schools at a later age).

- **School repetition rate by gender and grade:** this reflects failings in the standard of education provided or external factors, such as malnutrition, that have a negative impact on a child’s academic performance.

- **School desertion rate:** how many children leave school before completing primary or secondary school?

- **Learning continuity:** compare the number of children enrolled in the first year of primary school with the number enrolled in subsequent years. Disparities must be explained - Is there a high repetition rate and is this grossly increasing enrolment in certain years? Do many students leave after completing primary school and fail to go on to secondary school? How many reach higher education?

- **The results of standardised, basic numeric and literacy tests performed at a certain age in most countries.** Most countries, by law, have to publish this on their websites. These figures are very revealing as shockingly poor results often illustrate the low quality of education that students are receiving and disparities between public and private schools.
In some Latin American countries, governments have introduced conditional cash transfer programmes that give families living below the poverty line a monthly cash allowance provided that their children attend school and regular medical check-ups. The idea behind these programmes is to break the poverty cycle and encourage school attendance; the cash received by these families is supposed to compensate them for the fact that their children are not working, but attending school. Examples of these programmes include Bolsa Familia in Brazil (impact studies show that this is one of the most successful examples), Oportunidades in Mexico, and Mi Familia Progresa in Guatemala. However, in many countries, such as Guatemala, school enrolment rates have increased, but school facilities have not expanded in order to accommodate the new students. As a result, overpopulated classrooms with up to 60 children or children from different grades taught by a single teacher in one classroom are often seen.

8. If your country has an indigenous population and/or different ethnic and linguistic groups, is bilingual education provided?

Many studies have proven that in countries with large indigenous populations, such as Guatemala and Bolivia, educating children in their own language, in a manner that is culturally appropriate, is an important factor in terms of guaranteeing academic success. The availability and quality of bilingual education can help to explain disparities between urban and rural areas and between indigenous and non-indigenous students.

9. Are school facilities adequate?

Adequate school facilities will have a crucial impact on the quality of education provided.

Overpopulated schools are also forced to run several shifts in the morning and the afternoon, which obviously has an impact on the quality of the learning experience. This is especially common in rural schools.

It is also important to consider the availability of basic materials such as desks, chairs, textbooks, notebooks, pens, and pencils. Many rural schools lack the most basic facilities such as electricity and running water.

10. Coverage should not only focus on shortcomings and failings. It is also important to highlight success stories, and the lessons that can be learned from them.

11. Journalists should consult experts from a wide range of sources and institutions to ensure that their coverage is balanced.

‘Reporters usually quote the same experts from the same conservative and right-wing think-tanks, ignoring sources who represent those who are worst affected by the country’s shortcomings in terms of broadening access to education, such as the indigenous population’, says Argüeta.

Sources should include experts and academics from a wide range of sources—governmental bodies, public and private universities, think-tanks from across the political spectrum, and NGOs and civil-society organisations that represent the most vulnerable groups in society, such as women and the indigenous population. Often these latter groups are the worst affected by exclusion and the lack of access to education.
Although egalitarian societies with a pattern of matriarchy still exist in Asia, Africa, the Americas, and Oceania, the decline of matriarchal societies in the world has made way for patriarchal domination. Gender discrimination has become rampant. World history is, indeed, “his-story” and not “her-story”.

The way we live today is influenced by, and based on, male-derived principles, which bring about male dominance and universal patriarchy. No matter where women live, they do not share equal rights with men. Sensitive and justice-seeking journalists should expose this social malady at every opportunity, so that the lives of women can improve.

Since most societies are unwilling to change the status quo, it is not easy to expose gender inequality without ruffling some feathers or provoking outrage. In order, then, to devise the best approach to report on it, we offer a definition and identify related problems:

What is gender inequality?

It is the unequal treatment of a person based solely on that person’s sex. Gender equality does not, however, mean that men and women are the same. Nor does it mean that only women should be protected. It means that both men and women should have equal opportunities, lest reverse discrimination be committed.
Gender inequality is reflected even in journalism. With the exception of some countries where women enjoy equal privileges with their male counterparts, female journalists elsewhere are oppressed. They are not allowed to practise their profession to the full and are paid less than men for the same position and performance. When female journalists fight for their own rights, besides being inspirational to others, they will increase their own number. In doing so, they will take more journalists on board for the unified fight against gender inequality.

Problems in brief

1. Equal pay

In many countries, situations where women are paid less than men for doing similar jobs, simply because they are women, are common. Even in countries like the United States, where laws have been passed to amend wage discrepancies, the difference in salaries stubbornly remains. Discrimination in hiring, firing, and promotion persists. The wage gap, due to the undervaluation of jobs typically thought of as “women’s work”, is still there.

2. Inequality in healthcare

Statistics shows that women in sub-Africa are more than 1.5 times as likely as men to contract HIV. Women have less access to healthcare facilities compared to men. High mortality rates for women in some parts of the world could be the result of gender bias in health-care and nutrition. Various studies show that women consume fewer calories per day than men, and this nutritional deprivation impacts growth and has consequences for women with risk factors in pregnancy. This condition complicates childbearing and results in elevated numbers of women and infant deaths. In some traditions, women eat last and least, even when pregnant and breastfeeding.

3. The right to vote and political empowerment

Although limited voting rights were gained by women in Sweden, Britain, and some U.S. states in the 19th century, the right to vote for women is not yet widely achieved. In general, women are defined by deeply rooted cultural values only as mothers, wives, and daughters. Another stereotype is the gender-gap theory, which contends that men are more interested in politics than women. The absence of women in political, social, and economic life has created imbalances in decision-making structures.

4. The right to equal education

Educating women as a key to development and the reduction of poverty is widely accepted. But there are many reasons to be concerned about existing gender inequalities in education. In developing countries, girls’ education is far from being a priority. Gender-based discrimination against women and girls remains prevalent in many societies. Education, therefore, must be an integral part of any strategy to address gender inequality.

5. Economic rights

Discrimination against women by granting credits or personal loans on the basis of gender is another reality which hampers participation in economic growth. In many countries, creditors can ask a woman to apply in her husband’s name or deny her altogether. In rural areas where land is a basic necessity for economic survival, ownership of land through inheritance is denied to women.

6. Equality for development

Women’s participation is central to development, and the exclusion of women in key posts hampers progress. A society that excludes half of its talent pool and work force hurts itself; the extent of a society’s development is most clearly reflected in the freedom women enjoy, and the extent to which they are able to express their creativity. That is why gender equality is universally recognised as a fundamental human right and is included as one of the Millennium Development Goals (MDGs).

How to report on gender equality

Reporters willing to expose gender inequality have to find a smooth way of doing it, yet without being fearful, confrontational, or graphic. The practice of this aspect of journalism needs wisdom, particularly in parts of the Middle East, Africa, and Asia, where men who consider the place of women to be in the house become furious whenever gender inequality is discussed.

It is obvious that good journalists should challenge the status quo in existing social political systems and institutions. This they have to do to enlighten and educate those who are willing to learn and advance the cause of women. They have to promote women’s rights, and combat discrimination and domestic violence against women. Good journalists should not only expose gender inequality, they should also provoke a public discussion on education and continue making it an issue until equality is enshrined in the constitution or bill of rights and in manifestos of both public and government institutions. Indeed, journalists, being socially and politically conscious, should promote it as part and parcel of the fight for human rights and insist that change take place.

1. Promote new heroes

A reporter may find female heroes of the past in every culture, and new voices of women, portray those heroic women as role models of excellence, and state how all women could achieve highly if they were given an opportunity and the liberty to act like those exemplary women. In extreme cases of fundamental religious societies, where men dominate women absolutely, a reporter should also depict in a positive light the achievements of females in culturally similar yet relatively more progressive countries.

For example, the modernising measures of former Turkish president Mustafa Kemal Atatürk, who granted women equal status with men, should be portrayed as a positive example when dealing with the Muslim world. Indeed for those who are sceptical, demonstrating the fact that marriage and motherhood can go along with the economic participation of women can be an asset.

2. Join hands to fight inequality

Both male and female journalists have to apply cleverness to keep alive the question of gender inequality. The socially and politically conscious journalist can always report on the state of women by choosing particular themes such as medicine, law, education, government, and business administration, or any profession for that matter, and throw some light on the status of women in them by provoking discussions that can raise awareness of women, men, and government officials, including members of parliaments or senates.

In addition to moving their pens and lips, far-sighted journalists should cite good examples by finding role-model societies where the indiscriminate and full participation of women have contributed immensely to the betterment of their nations. Successful female stateswomen, scientists, educators, business leaders, writers, poets, musicians, artists, doctors, engineers, lawyers, and journalists should be presented repetitively to inspire and motivate others to follow in their footsteps.

3. Challenge gender-based stereotypes

The gender-gap theory is one such stereotype. It perpetuates the (incorrect) idea that men are inherently more interested in politics than women. Thus, one good example of poor reporting would be describing participation on election days as affirming the “gender gap” between men and women, which is now proven wrong. By educating the public, journalists can help in dissolving cultural stereotypes of this kind.

4. Use every opportunity

National holidays are ideal opportunities for the smart journalist to voice his/her opinion about gender inequality. On Mother’s Day, for instance, one can write anything about the status of women, for example, domestic problems, income disparity, socio-political discrepancies, as well as inequalities in education, healthcare, and professional positions. Father’s Day could be used as an excuse to raise women’s issues in light of the advantages men have.
Regarding New Year, a journalist should question what the following year has in store for women. Does it bring new jobs, social justice, and better opportunities?

On May Day or Labour Day, a journalist may scrutinise whether all working women have a reason to be a part of the festivities. Do women really have a reason to celebrate, considering that they continue to get paid less for doing the same work as men? Do women who are discriminated against in workplaces because of their gender have anything to do with such days? What have women who retire without any medical and retirement benefits got to do with these holidays?

Independence Day is an ideal moment to make noise about gender inequality. A journalist should undertake a critical review of the notion of independence, liberation, and freedom versus the situation of women. Does this day really stand for women as well? Are women as independent and as free as men? Or are they still abused, dehumanised, oppressed, and exploited? Indeed, genuine journalists should question the national flag itself: Does that proudly waving flag really represent women, or does it wave only for men?

A native of Harar, Ethiopia, Guenet Ayale Gruenberg completed her studies in Harar and Addis Ababa before working as a journalist for Ethiopian Television Network for 10 years. After the fall of the Ethiopian military regime in 1991, she became the publisher of several newspapers in Ethiopia and served as the editor-in-chief of the country’s first monthly magazine focusing on women’s issues.

Guenet is also the author of two best-selling books on former dictator Mengistu Haile Mariam, now in exile in Zimbabwe. Guenet has four children and currently lives in France.
When a story on a particular topic is told over and over again, it leads to what is known as media fatigue—a situation where journalists and editors find the topic no longer newsworthy.

However, the worst is when audiences become fatigued—when general readers are fed up with the subject as well. This problem is one that bedevils HIV/AIDS reporting despite the fact that many people—especially the affected and the infected—still want to learn more. Unlike what happened in the 1990s, when most editors wanted to have emotion-laden articles on HIV/AIDS, the 20th century is different. Editors are reluctant to approve such stories on HIV/AIDS unless they are convinced that there is something completely new in the article.

So, does this mean that HIV/AIDS is a tired story? It certainly should not be: in the year 2013 alone, close to 2 million people will lose their lives from the disease worldwide. Another 33 million will have to face the difficulties of living with AIDS. This story is one that must be told at all costs.

What follows are some ways journalists can ensure that this important issue does not go unreported.

Give your story a human face—the 2013 version

The most boring way of telling a story about HIV/AIDS is when journalists peg their reports on statistics without breathing life into the numbers. Indeed, perhaps the lack of real-life is one of the reasons why editors are getting fatigued with the subject.

That is not to say that numbers are not important—in AIDS reporting, numbers can still help to impress upon the reader the seriousness and scale of the situation; however, to make them more immediate, these figures should be reported alongside the human faces of HIV/AIDS patients. Allowing people to tell their stories through the journalist is critical to supplement or explain the lifeless figures.

That said, it is clear that the human dimension of this particular story has changed over time. In the 1990s, a good HIV story would be told through a picture of a skeletal patient gasping for a last breath. This picture worked wonders as an emotional appeal to donors and as a fear-based strategy for behavioural change.

In 2013, such a photograph cannot tell the whole story anymore. With the development of anti-retroviral drugs, and the supplementation of correct nutritional foods, a person living with AIDS may appear healthier than many people living without the virus. The fear-based strategy no longer applies, which has completely changed the way we report on the disease.

Perhaps the abrupt change of the ‘HIV image’ from ‘bad’ to ‘good’ might have influenced a number of journalists who no longer see the virus as newsworthy. According to experience, bad things easily make news. But if something looks good, then a journalist must work extra hard to convince the editor that it is important to cover.

Stay up-to-date on the latest scientific developments

Journalists who report on HIV/AIDS should pay close attention to new research findings, resistance to anti-retroviral drugs, drug stock-outs, proliferation of counterfeit and substandard drugs, and most importantly, the figures. These aspects, while always important, can be made more
An AIDS patient lies in bed at the Hillcrest Aids Centre in Durban, South Africa. EPA/Nic Bothma

interesting for the reader if they are told from a first-hand source or from someone with real-life experience.

Root out the truth—don’t accept the official version on its face.

No matter what the approach, journalists must maintain a careful and analytical approach to reporting. Following the emotional appeal that was used in the advent of HIV/AIDS, hundreds if not thousands of organisations were formed with the aim of scaling down infection, reducing stigma, and providing care to patients. While most of these are genuine, some are out to make money and may try to take advantage of journalists in order to generate increased funds for themselves.

Many cases have apparently been stage-managed in order to trick unsuspecting journalists into write appealing stories. This agitated one of Kenya’s senior science writers, who published an article in the Daily Nation headlined “Numbers Don’t Lie…Do They?”. In the piece, he gave a scenario of a road accident in which it is first erroneous announced that more than 20 people had died. After some time, the figure is revised, and the actual number of confirmed deaths becomes five. The writer asked: Should the minister for transport take pride and convene a press conference to announce that the government has worked hard to reduce the accident death toll on that day from 20 to five?

Before his article came out, several other journalists had already reported on the government’s “success” in reducing HIV prevalence. Without using a finer lens to read between the lines, those journalists simply repeated information given by a source.

Do your homework.

This means that despite the fact that every journalist needs to have faith in his sources, each assertion by a source given must be treated cautiously before it should be considered a fact. The best way of doing this is by researching the topic before meeting the interviewee. This background information is critical because it can guide a journalist’s questions and clarify complex issues related to HIV/AIDS.

Journalists should also be sure to get the contact information—especially mobile telephone numbers—of the source, as this makes it easier to go back to the interviewee with clarifications and follow-up questions. Additionally, journalists should seek to talk to people with divergent views on the subject in order to balance the article.

If the subject is heavily scientific, the journalist can seek to send a draft to an expert or trusted source before submitting it to an editor. The journalist, though, must ensure that the expert or source checks only for the accuracy of scientific information; the review should not involve the changing of facts or the story line, or the addition of further viewpoints.

Keep your audience in mind.

Remember that you are writing for the general public, not medical experts. Simplicity and accuracy can both help make an HIV/AIDS story more interesting and appealing. This means that the writer must explain all acronyms should be explained in full the first time they appear in a story, regardless of how obvious they may seem.

Follow the basic rules of journalism.

Above all, it is important to keep in mind basic journalistic skills. Determine what content is more or less important to the story, and keep track of events, so that information flows chronologically. Do not keep readers in suspense for too long as many may not be willing to wait to read to the end. Think about the audience and find out their preferences. Determine what is interesting to them—not just what is interesting to you. Keep things simple and accurate. In the case of a HIV/AIDS story, avoid incriminating phrases. Make the right choice of photographs to avoid stigmatising both the audience and the people in the image (and be sure to seek permission before taking such photographs).

Be judicious: not every story needs to be told.

And, even before considering all of these tips, the journalist needs to gauge the potential impact of the story on society. Certain stories may be better left untold. To give an example from another subject matter, a story about a drug trafficker can be powerful depending on the angle. But profiling the success story of a trafficker who earned millions through the trade might not be in the best interest of society. Rags to riches stories are easy ways to sell to consumers, but journalists should always follow fundamental ethical principles.

All of these tips taken together can help to combat reader and editor fatigue surrounding HIV/AIDS stories, and, critically, to ensure that the virus and its victims remain in the spotlight.

Isaiah Esipisu is a Kenyan journalist who received his professional training at the Kenya Institute of Mass Communication (KIMC). He started writing newspaper articles in 1999 while still at university. Since then, he has remained a freelance science journalist focusing on environmental issues, health, agriculture, and technology.

Isaiah has published articles in various local and international publications including Reuters AlertNet, Inter Press Service, EPORE (CIA) Magazine, the UK-based New Internationalist, the Kenya-based Daily Nation newspaper, The East African, The Standard, the Kenya News Agency, People Daily, and AgriLink. Together with five other journalists, Esipisu published a photography book entitled The Knife Cut, which highlighted male circumcision as a major preventative measure against HIV infection.

Jasiah Expone is a Kenyan journalist who received his professional training at the Kenya Institute of Mass Communication (KIMC). He started writing newspaper articles in 1999 while still at university. Since then, he has remained a freelance science journalist focusing on environmental issues, health, agriculture, and technology.

Isaiah has published articles in various local and international publications including Reuters AlertNet, Inter Press Service, EPORE (CIA) Magazine, the UK-based New Internationalist, the Kenya-based Daily Nation newspaper, The East African, The Standard, the Kenya News Agency, People Daily, and AgriLink. Together with five other journalists, Esipisu published a photography book entitled The Knife Cut, which highlighted male circumcision as a major preventative measure against HIV infection.
The environment is the overarching issue of the 21st century for two reasons:

1. The environment includes and touches everything: air, water, food, health, climate, energy, development, poverty, economics—the list could go on without end.

2. Nearly every major environmental indicator is in decline.

We are pushing up against the limits of the Earth’s ability to support us. Climate change, biodiversity loss, and nitrogen pollution are moving toward crisis levels, according to recent studies. There is little public awareness of this reality, which means journalists covering the environment have a plethora of important stories to cover. It is not all doom and gloom pieces, though. There are many, many good news stories to be written about the diversity of efforts on both local and national scales that attempt to address these problems. At the same time, it is important to investigate whether proposed solutions, projects or ‘green’ policies actually solve problems, and whether or not there are actual or potential unintended consequences. The world is littered with well-intended projects gone bad for one reason or another.

The seventh Millennium Development Goal (MDG) is to ensure environmental sustainability by 2015. Sustainability is a much misused and misunderstood con-
cept. In general, it means an action or activity can be continued indefinitely with little, or manageable, impact on the environment. Earth is a closed system—wastes and pollution end up somewhere: pesticides sprayed in Chile could harm fish stocks off the coast of Australia and vice versa.

Claims are often made that a business, policy, or action is sustainable. But is it really? Are there indirect impacts on other regions or resources? What about future generations? Many sustainable projects fail to be truly sustainable due to poor implementation or poor understanding of the situation in the local region or community.

Journalists should ask for proof or demonstrations of true sustainability. They should not accept assurances. And when using the term in a story, explain what it means.

Fortunately, Goal Seven, ensuring environmental sustainability, has specific indicators to measure a nation’s or region’s progress. Let’s look at just one because the same general approach would apply to all.

MDG indicator: reduce biodiversity loss

Biodiversity is the term used for the estimated 8.7 million species (give or take 1.3 million) that form our life support system by producing the planet’s air, water, food, and much more. Species of plants, animals and others are becoming extinct at a rate of 5,000 to 30,000 per year. And the speed of this biodiversity loss is increasing, as members of the Convention on Biological Diversity (CBD) acknowledged in 2010. They have set new targets for 2020.

As in any environmental story, journalists covering the decline of species in their region need to not only show how people and the environment are being affected, but also try to determine the root causes. Biodiversity loss on land results primarily from the alteration of natural habitats due to agriculture, deforestation, and resource exploitation. In the oceans, it is mainly the result of overfishing. However, the root cause of land conversion and overfishing are often specific policies (rules and regulations) and current economic circumstances.
Coping with Complexity: Science and environmental issues can be challenging for the public to understand due to the technical language and complexity, so journalists should act as translators by using clear, concise language and relevant examples to explain the science and the issues. Here are some tips:

- **Start by doing background research on the subject.** Science has its own language and uses some common words differently. For example the word ‘theory’, as in theory of gravity or theory of climate change.

- **During interviews ask sources how they would explain their findings** if they were speaking to a neighbour. (If that is still too complicated, ask how they would explain it to a ten-year-old child.)

- **Never be embarrassed to say ‘I don’t understand’**. It is the expert’s role to help journalists do their job of making the research or findings understandable to the public.

- **The story should answer these four questions:** Why is the study or report important? How does it affect the public? What are implications for people, region, etc.? What should be done?

- **Write so your grandmother will understand.**

What do sustainable government policies look like?

‘The right rules and legal frameworks help millions of people to do the right thing’, according to The World Future Council (www.worldfuturecouncil.org), a German charity that gives awards to countries with the best environmental and development policies. Rwanda’s National Forest Policy won the 2011 award for its comprehensive “total landscape” approach that has led to a 33-percent increase in forest cover. It also resulted in reduced erosion and improved local water supplies and livelihoods, all while helping to ensure peace.

The Costa Rican Biodiversity Law was the 2010 winner for its success in making the Central American country the first developing nation to succeed in halting and reversing deforestation. Even small policy changes can make a difference. Niger, for instance, adopted a rule allowing local people in the Sahel without land titles (formal property rights) to own naturally regenerating trees if they protected and cared for them. Now millions of hectares of desert landscape are green.

**Perverse incentives or bad policies for the environment**

Many policies, such as certain types of subsidies, were created many years ago and without awareness of their negative impacts on the environment. Even when such policies have clear negative impacts on the environment, powerful vested interests resist and often prevent any changes to those policies. Here are two of the biggest perverse incentives:

- **Fisheries:** Governments give away an estimated US$ 27 billion worth of subsidies to support fishing fleets at a time when fishing pressure must be reduced because most ocean fish stocks are overexploited.

- **Fossil Fuels:** Keeping climate change to a minimum will require sharp reductions in use of fossil fuels, since their carbon emissions are the primary cause of climate change. However, the fossil fuel sector receives US$ 300 billion in annual subsidies. Price and production are the two main types of subsidies. Many governments in the developing world use price subsidies to keep the costs of fuel low. Developed countries mainly use production subsidies to reduce the industry’s exploration costs. Various analyses show that both forms of subsidies increase consumption.

**General tips for the savvy environmental journalist:**

1. **Learn the science really well,** in as much detail as possible. It is the only way you can write plainly and keep yourself from being deceived.

2. **Because you cannot know everything,** make sure you use sources that are reliable and who do not have a hidden agenda. Some scientists or experts have vested interests or are paid by corporations and lobby groups. This includes NGOs and governments.

3. **Check the content of news studies, reports, or press releases with trusted sources.** There are organisations paid to confuse reporters on technical issues or to promote certain agendas.

4. **Question and challenge all information and arguments,** no matter where or which side they come from. Credibility is everything.

5. **Avoid ‘he said—she said’ stories that just trade accusations.** Find out what is really going on. For example, nearly every climate scientist in the world has been saying for years that climate change is happening now, and yet some media still quote sources saying ‘no, it isn’t’. There will always be contrary viewpoints—someone who says the Earth is flat—but why quote them in a story?

When it is not obvious, be able to make an accurate assessment of each argument, and then decide which merits attention, or point out flaws and lies.

6. **Get out and meet people involved in environmental issues,** including those directly impacted.

**One final thought: Global is Local and Local is Global**

Virtually all aspects of environmental stories are local. Climate change, water, food, pollution, sustainable development, biodiversity, etc. have local angles. But these stories are also unfailingly global—a local environmental issue is almost certainly replicated in many other places around the world.

---

**Stephan Leahy** has been an independent, environmental journalist for nearly 20 years. His writing has been published in dozens of publications around the world, including New Scientist, The London Sunday Times, The Guardian, National Geographic, Maclean’s Magazine, Earth Island Journal, The Toronto Star, Wired News, Audubon, BBC Württe, and Canadian Geographic. Based outside of Toronto, Canada, Stephen is currently the International Science and Environment correspondent for the Rome–headquartered Inter Press Service News Agency (IPS), the sixth-largest global news agency. His articles appear in over 500 newspapers and magazines around the world, reaching an estimated 200 million readers in up to 20 languages.
In his 1999 book *Development as Freedom*, renowned economist and Noble laureate Amartya Sen stated that investment in healthcare can lead to success in meeting a wide range of development targets, such as those identified by the Millennium Development Goals (MDGs).

Indeed, good healthcare improves quality of life, reduces morbidity and mortality, and raises economic productivity. As such, the World Health Organization (WHO) has recognised the importance of universal health coverage (UHC) and urged its member states to adopt programmes providing essential health packages.

In general, UHC has the following components: appropriate levels of financing; access to medicines, vaccines and technology; adequate trained personnel; and emphasis on social determinants of health, including income and gender. Critically, media coverage of healthcare topics can help drive support for UHC in all development contexts.

Reporting on health: What to look for

Good reporting on healthcare means staying constantly aware of events or findings that could have significant health-related consequences, and, thus, that could serve as a starting point for a story. Look out for occasions such as Diabetes Day, Heart Health Day, and so on, as these can be useful opportunities to devote attention to lifestyle diseases, in particular. By staying alert, journalists should be able to spot a range of incidents.

Examples include:

- **The reported outbreak of disease**, such as cholera or dengue fever, or any collection of unidentifiable symptoms affecting a large number of people;
- **A major scientific finding or research development**, for example, new knowledge about the effects of climate change on disease, or the challenges of drug resistance. Only recently, for instance, international media has covered extensively drug-resistant tuberculosis (XDR-TB) in India;
- **The release of detailed health indicators** for a particular region or country from a credible source, such as a census, intergovernmental body, or international fact-finding team;
- **A major industrial or natural disaster**, such as the earthquake and tsunami that led to the Fukushima nuclear crisis, is bound to have health consequences.
How to frame your story

Important top-level objectives, such as the MDGs, can appear distant and complicated to citizens and national policymakers; therefore, journalists covering healthcare must work to properly frame their stories within the reality of a particular country or society.

In order to provide the right context for their readers, journalists need to begin their investigation on a particular health issue by asking some basic questions. Imagine, for example, that the plan is to cover the challenge of under-five mortality, which refers to children who do not survive until their fifth birthday. Here are some elements that should be included in such a report:

- **Statistics:** mention the current under-five mortality rate for each specified area.
- **Changes:** analyse the pattern of under-five mortality over the past decade, or earlier.
- **Policy effects:** refer to any significant government-initiated initiatives aimed at reducing the mortality rate, whether successful or not.
- **Transparency and reliability:** evaluate the reliability of the data on mortality (consider the type of data and how the system the country has in place, or the lack of such a system).

From here, there are many angles that journalists could explore in a story on under-five mortality. Maybe, one good place to begin is with any potential asymmetries in healthcare related to geography, economic status, gender, or other social determinants. Do certain regions—ranging from states and provinces to individual cities and villages—have higher death rates for children under five? Are poor children or girls at a greater risk of death? If yes, why?

Journalists working in countries with unique, long-established social traditions, such as those in South Asia and Africa, should keep in mind that health-related goals often depend on reporting across cultural barriers. Consider, for example, a rural village that the medical community has identified as exhibiting a high rate of child mortality. An investigation should look at which cultural factors, including community and family hierarchies, affect children’s chances of survival.

Working backwards, a journalist could also examine the effect of existing policy interventions. There is research data, for example, demonstrating a positive correlation between public spending on skilled delivery assistance and immunisation for the poor, and reduced child mortality. Compare and contrast, also, policy initiatives among various countries as an example of what has worked and what has not.

For economies that rely heavily on donor aid to fund health system initiatives, tracking the flow of aid is a key coverage point. Journalists should analytically evaluate implementation data and the credibility of reporting mechanisms to investigate whether aid is reaching its intended target.

In the context of developing countries, covering the flow of aid also includes monitoring the efficacy of specific initiatives, such as the distribution of insecticide-treated bed nets to protect against malaria in young children. Look into the outcome and ask the basic but powerful question: Is the initiative working? Talk to parties on both sides: Do the expectations of donors match the experiences of the recipient communities?

Remain aware that while the above suggestions and categories refer specifically to under-five mortality, they are applicable to writing stories on any health-related topic.

Where to find information and sources

No matter the tack you choose to take, it will be critical to identify key sources, cross-check information with public health authorities wherever warranted, and obtain views and insights involved before drawing any inferences or note any caveats.

However, while authentic data is needed to arrive at an informed conclusion, it is certainly not always easy to find. Below are some key suggestions of places where investigative journalists can seek information on healthcare:

- The WHO is the primary source of data used in most international policy discussions. Vital indicators relevant to the MDGs, including poverty, life expectancy, fertility, mortality, prevalence and incidence of communicable diseases, and access to pharmaceuticals are reported periodically by the WHO, which often synthesises data from multiple reliable channels, such as UNICEF, the UN Population Fund (UNFPA), and the World Bank.

There are also many peer-reviewed journals dealing with public health issues, MDGs, and clinical research. These include *The Lancet*, *The British Medical Journal*, *The Journal of the American Medical Association*, and *Science*. In addition to “open access” journals, which provide scholarly material free of charge, a number of subscription-based scientific publications grant free access to journalists who make a formal request. If not, note that authors are usually happy to provide reporters with the full text of a specific article in question if contacted directly.

Some governments, including those in emerging economies, may seek to obscure healthcare data in order to avoid political opposition and electoral losses. But, in countries where national Freedom of Information (FOI) laws exist, journalists are within their rights to make public certain information and data not proactively published by authorities.

Answers given by ministers during legislative hearings also often provide valuable information. Look for parliamentary committee reports, which some countries, occasionally, make public on the Internet. In many cases, research groups and activists analyse such reports and share them with journalists.

NGOs and private foundations without commercial interests and not affiliated with a political party provide valuable information to journalists. One example is that of the Commonwealth Fund in the United States, which compared the likely impact of health policies of the two major contenders in the 2012 presidential elections.

Don’t forget that the credibility of health data can itself be the subject of news coverage. If the public health system of a region or country does not have reliable, publicly available data on the health of children, women, and persons diagnosed with infectious diseases, such as HIV/AIDS, malaria and tuberculosis, that, in itself, is a story worth telling.

Getting the big picture: Healthcare infrastructure

Any story on healthcare will have to examine and take into account the healthcare system currently in place.

Consider these questions:
- How do individuals pay for healthcare? Is there financial support from official agencies?
- Is there a cashless provision at the point of care?
- Is there a national list of “essential medicines” that matches or builds on the recommendations of the WHO? Are these medicines subject to price control?
- Is there infrastructure in place to test the quality of medicines both produced in the country or imported?

Remember that the inability to pay for medicines, diagnostic testing, and/or hospital admissions is a major cause of distress and impoverishment in many countries. If available, health expenditure data can indicate the level of out-of-pocket spending by citizens, in the absence of government support of insurance schemes.

Lifestyle diseases

Finally, a growing area of concern is the emergence of lifestyle diseases. These ailments are linked to social factors that influence individual behaviour—such as promotion of tobacco and alcohol, poor awareness of unhealthful food, and high levels of stress.
Interestingly, even some emerging economies face health consequences due to a nutrition paradox: excess nutrition and lack of physical exercise in one sector of the population, and lack of nutrition and food security in another. This requires sensitive coverage of both dimensions, which may indicate further problems, such as poor income redistribution, and the influence of special interests.

The media can help correct such an imbalance by asking the right questions:

- Is subsidised food in public distribution systems unhealthful?
- Are food stamps, vouchers, or cash transfers encouraging poor habits?
- Is there adequate visibility for campaigns on the ill-effects of lifestyle choices?

As the window to the world for most of the public, the media has a responsibility to ask and answer questions like these that will enlighten the public and further enable the success of national and international healthcare initiatives such as the MDGs—which, in turn, increase quality of life and economic productivity.

G. Ananthakrishnan is associate editor at The Hindu, where he writes on public health, the environment, and welfare. He was previously the paper’s city editor and Internet editor.
In a 2011 Transparency International survey, more than 3,000 business executives from around the world were asked to assess the effectiveness of various approaches to weeding out corruption. The result: nearly half (49%) indicated that investigative journalism played a critical role. Respondents from Pakistan (73%) and Brazil (79%), countries where the press reports fiercely on suspected acts of corruption, placed particular faith in the media’s ability to uncover wrongdoing.

Why did the participants feel so strongly that journalists can help? To answer this question, it is important to remember that rampant corruption in less-developed regions of the world is largely due to a lack of transparency and accountability. Power is concentrated in just a few hands, and statutes promoting the work of watchdog institutions are often toothless. The elite consider themselves above the law—which otherwise exists to empower common citizens—and oppressed classes come to accept this evil as a societal norm. In such doom-and-gloom realities, it is journalists who are left with the manifold task of guarding the public good.

Corruption in the developing world is, in a word, endemic. Corruption harms economic fairness: in the same Transparency International survey, 27% of respondents said they had lost business contracts to competitors who

...
had engaged in bribery. Executives from developing countries—Malaysia (50%), Indonesia (47%), Mexico (48%), Pakistan (42%) and Egypt (41%)—reported such bribery as particularly detrimental.Chunks of money that should or could be used to benefit society—from foreign aid and loans, to the revenue raised by burdening the poor with indirect taxes—flow, instead, into the pockets of the decision-makers and their business allies.

This alarming situation calls for journalists to play an extraordinary role in highlighting corrupt practices. To be sure, this task is a challenging one, particularly in developing countries, where Freedom of Information (FOI) legislation may be non-existent or highly ineffective. Moreover, in many cases, those who work to expose wrongdoing may put their lives at risk.

But where there is a will there is a way. Indeed, there are various tools that journalists can use to help stamp out corruption.

**Spotting corruption**

Despite efforts by those involved to cover their tracks, corruption “speaks” whenever and wherever it is committed. Journalists need to be aware of this language. If a contract is awarded in undue haste or with significant delay, there is something wrong. If a license is issued without due procedure, money must have changed hands. When someone gets rich overnight, there has to be a reason. If development work is accelerated, there are likely some big businesses trying to invest in decision-makers in order to win favour. Journalists should read the signs and dig for answers.
There are several techniques journalists can use to spot potential wrongdoing; these include checking budget books and official documents, collecting court records, analysing paper trails, and conducting investigative interviews. However, for journalists in the developing world, making use of these tools is sometimes difficult, given resource constraints, and pressing deadlines imposed by understaffed editors who often demand that reporters produce copy on a frequent basis. Nevertheless, there are ways to overcome most challenges.

By looking around carefully, [sources] can be found within the bureaucracy, and often the best sources are government officials who witness every step of corrupt acts. Some officials, in fact, may have even tried in vain to intervene, and once they are won over, these officials can aid in the struggle to bring the truth to light.

Initially, journalists must learn the art of cultivating good sources. By looking around carefully, such individuals can be found within the bureaucracy, and often the best sources are government officials who witness every step of corrupt acts. Some officials, in fact, may have even tried in vain to intervene, and once they are won over, these officials can aid in the struggle to bring the truth to light.

Reporters need to know the right people in the right places, so it is important to form working relationships with lawmakers and get acquainted with organisations promoting transparency and accountability in different sectors. By making the right connections, getting official documents quickly is much easier. And a journalist with a good reputation will have whistleblowers running to him quickly. And a journalist with a good reputation will have whistleblowers running to him quickly. For example, sources who speak more during a given interaction generally have less to reveal, so approaching the quieter ones first tends to be more fruitful. Avoid officials who are often frequented by journalists: the most valuable sources shy away from meeting reporters and require people to win their trust.

Winning trust is not easy, though. Being prepared before any interview with a potential source is vital. Knowledge of the source’s career, character, and current position gives the journalist an advantage, and showing an interest in the person, sharing a cup of tea and a chat along with a little bit of flattery—maybe briefly complimenting the official’s good work—can make them feel more comfortable in eventually opening up.

A potential source may be uncomfortable in sharing important information during the initial meeting, but with gentle encouragement, over time, small pieces of information will start to appear. Explicitly asking for news and overtly taking notes may alarm a potential source, so the journalist should let the source lead conversation without interrupting with questions, and simply try to remember what is said. A patient listener will reap the rewards.

With the passage of time, the official will become the journalist’s eyes and ears in a department or institution, and protecting that source’s identity is critical. One effective way to do this is by throwing observers off the track. For example, in most cases of corruption, more than one government department is involved. To divert the attention of those investigating, it should be suggested, when referring to a source, that the obtained information was disclosed anonymously by another department.

Looking for alternative sources

As there are no effective FOI laws in many developing countries, lawmakers can also help to acquire desired information. Often, these individuals are authorised to seek information from any department unless it is classified. A journalist should seek out like-minded legislators, who can access official records denied to reporters. And, while some information is public, the journalist hunting down an exclusive story may want to cultivate a source that liaises between departments and is privy to details before other departments are.

In addition to working with government officials, journalists can also approach those whose interests are hurt by means of a corrupt deal. In many cases, the latter may even approach the media for help in bringing down their competitor. A journalist should listen to these individuals patiently—even when the claims seem exaggerated—and should request complete documentation of the claim. If they truly want to highlight the case in public, they will provide whatever is needed.

Here, it is critical to employ analytical skills. Sifting the fact from the fiction and filtering out any propaganda material is at the heart of a good story. By approaching all the parties involved in an alleged scam, the journalist will ensure objective reporting and perhaps gain sources for future stories on corruption.

Holding the big fish accountable, though, is not without personal and professional risk, and it is important to continually assess these risks. For example, waiting a day to get one version from a low-risk individual is fair, waiting a week to hear back from more dangerous individuals is prudent. Remaining courteous and respectful with all the subjects of a story will reduce risk, but even explaining objectively to them that this is a news story—not a war waged against them personally—might not placate a particularly irate subject. In this case, a reference to the portions of the respective law they have allegedly violated and a responsible attitude in the reporting goes a long way to lessen personal danger, even if it cannot guarantee complete security.

Until FOI legislation is implemented worldwide, and until transparency is accepted as a basic democratic right, there will always be an element of threat to personal and professional safety for both journalists and sources involved in exposing corruption. However, these tips can help the driven journalist to minimise risk and more effectively do his or her job: holding the big fish accountable.

Cultivating sources

Initially, journalists must learn the art of cultivating good sources. By looking around carefully, such individuals can be found within the bureaucracy, and often the best sources are government officials who witness every step of corrupt acts. Some officials, in fact, may have even tried in vain to intervene, and once they are won over, these officials can aid in the struggle to bring the truth to light.

Reporters need to know the right people in the right places, so it is important to form working relationships with lawmakers and get acquainted with organisations promoting transparency and accountability in different sectors. By making the right connections, getting official documents quickly is much easier. And a journalist with a good reputation will have whistleblowers running to him quickly. And a journalist with a good reputation will have whistleblowers running to him quickly. For example, sources who speak more during a given interaction generally have less to reveal, so approaching the quieter ones first tends to be more fruitful. Avoid officials who are often frequented by journalists: the most valuable sources shy away from meeting reporters and require people to win their trust.

Winning trust is not easy, though. Being prepared before any interview with a potential source is vital. Knowledge of the source’s career, character, and current position gives the journalist an advantage, and showing an interest in the person, sharing a cup of tea and a chat along with a little bit of flattery—maybe briefly complimenting the official’s good work—can make them feel more comfortable in eventually opening up.

A potential source may be uncomfortable in sharing important information during the initial meeting, but with gentle encouragement, over time, small pieces of information will start to appear. Explicitly asking for news and overtly taking notes may alarm a potential source, so the journalist should let the source lead conversation without interrupting with questions, and simply try to remember what is said. A patient listener will reap the rewards.

With the passage of time, the official will become the journalist’s eyes and ears in a department or institution, and protecting that source’s identity is critical. One effective way to do this is by throwing observers off the track. For example, in most cases of corruption, more than one government department is involved. To divert the attention of those investigating, it should be suggested, when referring to a source, that the obtained information was disclosed anonymously by another department.

Looking for alternative sources

As there are no effective FOI laws in many developing countries, lawmakers can also help to acquire desired information. In this case, a reference to the portions of the respective law they have allegedly violated and a responsible attitude in the reporting goes a long way to lessen personal danger, even if it cannot guarantee complete security.

Umar Cheema is an investigative reporter with The News (Pakistan) and the founder of the Centre for Investigative Reporting in Pakistan (http://cip.pk/). He writes on corruption, politics, national security and unaccountable intelligence agencies, bold work that has resulted in his being abducted and abused. Umar’s unwillingness to stay silent about the ill treatment he has suffered has drawn wide attention to the widespread issue of anti-media violence in Pakistan.

For his brave journalism and willingness to publicly speak about the attacks against him, the University of Missouri conferred on him the 2012 Missouri Honor Medal for Distinguished Service in Journalism. In 2009, he received a Daniel Pearl Fellowship, becoming the first Pearl fellow to work at The New York Times. Cheema holds a master’s degree in science in comparative politics (conflict studies) from the London School of Economics.
There are the two essential questions a reporter covering business, the economy, or just about any topic should always ask: ‘How much does it cost?’ and ‘Where will you get the money from?’

These simple questions are not only key to gaining information about your current story’s topic, but they offer greater insight into reasons for decisions that have a direct impact on a country and its citizens.

Everything has a price associated with it—even the most humanitarian of efforts. Money is the backbone of all things. Once you figure out from where a business, government or non-profit group receives its money, and how the money is used, it’s a little easier to understand and write about broader, sweeping issues.

**Government cash**

Depending on the country and its level of development, money for government-funded efforts can be raised from sales, income, or business taxes; permits and licenses; and royalties/taxes from the extraction and exportation of natural resources. In less-developed countries, funds often come from development and donor aid (examples: the World Bank, United Nations, or CARE International).

**Know your budget**

You should be aware of how much money (revenue) a country, state, or province is bringing in each year, or if it lacks enough money to pay government workers, run state-owned hospitals, or fix roads (known as running a deficit.) This information is usually contained in an annual budget.
Knowing where to find a nation's annual budget, and being able to read it properly is key. A budget will give you a good idea of how much a government plans to spend in the coming year, and will list how much it spent in the current and previous years.

In more-developed nations, budgets can be found online at government websites, particularly ministries of finance, or sites for budget or tax-collection offices. In less-developed countries, you may not be able to find this information online, so you may have to request a copy of the budget in person.

If a budget must be approved by a parliament or other governing body, these political avenues could be useful in the quest for a copy of a budget, considering politicians will likely want to hold debates over expenditures listed in the budget. Regardless of the country, some politicians and citizens may feel a government is spending too much in the budget. Others will argue that the official numbers tell only a small part of the whole story—none of the key jobs of journalists is to find out where all those dollars and cents end up.

- The International Budget Partnership (www.internationalbudget.org) analyses budget transparency in countries around the world and provides resources for civil society organizations and researchers on how to read and access budgets.
- In some countries, there may be non-profit groups dedicated to increasing budget awareness among citizens. One example is the Accountability Initiative (www.accountabilityinitiative.org) in India.

Be sure you know how to read the columns in a budget properly, following the given guidelines to compute the currency amounts in thousands, millions, or billions. Also, be sure you know how to calculate percentage changes.

If the government has a surplus, meaning money left over after all its bills are paid, you should feel free to ask if this money will be saved or spent to increase services for citizens or on other things, like defence.

When there isn’t enough money

If a government is operating with a deficit, meaning spending more money than it is taking in, it is fair to ask officials how the government will make up for that shortfall. Ask if it will take on loans from other governments, issue government-backed bonds, or receive donor aid.

Issues surrounding money—particularly budget deficits—are often sensitive areas for officials, mostly in less-developed nations, as they must often rely on donor aid or loans from the World Bank to make up for financial shortfalls.

Remember that questions about finances are neutral, and should be asked by savvy reporters regardless of the political party in power. Be sure you approach officials—particularly heads of ministries and departments—respectfully. You should seek to develop positive, lasting relationships with heads of finance and trade, and key government advisors.

The money behind the MDGs

A government announcning a free health-care programme for pregnant women and children under five years old may be looking to meet the Millennium Development Goals (MDGs) related to child and maternal health. But be in mind that someone must pay for additional doctors, nurses, medications, and other necessities needed to give more people access to health care. It’s obviously a large undertaking, so it is fair to enquire about costs. The head of the ministry of health or similar department should be able to answer your questions, considering they are in charge of the project.

‘Can you tell me how much this programme will cost, and what sources you will use to pay for it?’ is a very neutral, causal question in comparison with, ‘What did you do with the money for this project? I don’t think the country can afford this.’ Your tone should be confident but never accusatory. This is important when asking about specific projects or initiatives that often get much fanfare. Your readers/listeners/watchers will want to know this information because it could affect their everyday lives.

Regardless of what you may know from other sources, never imply that any corruption is involved. Feel free to ask if tax increases are involved, although raising taxes on people or business is never a happy topic.

Should an official fail to answer the question, feel free to ask if she/ she knows of another source you should speak to, to get the answer. If you are dealing with a hostile official, your publication should allow you write about your failed attempt to gather that information: ‘The minister/official refused to answer questions about how much the project costs or offer details on how it would be funded.’ Be sure to document these exchanges carefully or use a voice recorder.

Development aid

Much of the progress made towards achieving the MDGs is due, in part, to money coming from development aid groups. Bodies such as the United Nations and World Bank have spent billions around the world organizing and running projects. Non-governmental organisation (NGO) are also pouring money into programmes in various nations in an effort to help them achieve several MDGs.

Can you tell me how much this programme will cost, and what sources you will use to pay for it?

To figure out how much a group is spending in a particular country, journalists should look to online documentation, as much information is public. Keep in mind that many NGOs in their home country are required by law to make their budgets or annual reports public.

But figures contained in annual reports can differ from the actual amount being spent helping people in your country. According to Tamika D. Payne, an independent gender expert based in Sierra Leone, journalists should ask, ‘How much money is being spent on direct beneficiary support?’ She points out that knowing some ‘NGO lingo’ is often useful and lets the person you’re interviewing know you have a better understanding of the issue, so they’re likely to provide a better answer. That kind of question forces the NGO to separate how much is being spent on overheads and other operational costs, such as paying its employees and transportation. If $10 million is being earmarked for a new school, for example,
journalists need to ask how much of that money is going to boys and girls in the school, for things such as books,' says Payne. ‘That amount of money is different from the overall cost of building the school.’

**Poverty, employment, and the private sector**

Nations are going to take several approaches to reduce poverty levels. Improving the economic fate of families—particularly women—and educating them will go a long way on the road to ending poverty. Journalists need to understand the connections between these issues.

The only way to reduce poverty is for people to earn more money. To do so, they need jobs, jobs that pay a fair wage on a consistent basis. How government officials will create more jobs for their citizens is a fair question that should be asked often.

Developing nations are keen to attract investors, or companies from more-developed nations. When this happens, journalists should not be afraid to question these businesses about their intentions in the country. Ask questions about incentives, or special financial awards the company received in exchange for setting up in the country (land, and discounted taxes, royalties, or tariffs are common).

Feel free to challenge businesses on whether their development will consist of all local workers. If not, what percentage, or how many local people, will be hired? How much will these workers be paid?

It is easy to relate these responses to the MDG on reducing poverty and raising employment levels, as the jobs are bound to have an impact on the economy.

Reporters may often have to be a bit more aggressive—but not accusatory—in their questioning of businesses. If the company is public, meaning its shares are traded on a stock exchange, reporters can find documents about the company’s financial health and investment plans online. To find answers about questions specific to a company’s project in a country, reporters may often have to call or e-mail someone in the country where the company is based, if a local representative cannot answer questions.

**Trade and debt forgiveness**

Developing countries are gaining greater access to markets of developed countries in terms of trade. The biggest benefit comes from tariff reductions on agricultural products.

Journalists should be familiar with products grown and exported from their country, and how much is sold to other countries. Speaking with officials from trade ministries and departments is key.

Because of budget shortfalls, many developing nations have a significant amount of debt on their books. 39 countries are eligible for debt relief under the Heavily Indebted Poor Countries (HIPC) initiative as of April 2013. Journalists in these nations should be aware of this status and the efforts the country needs in order to have some of that debt wiped away. Ask how much of the debt will be forgiven and the effect that easing will have on the economy.

Kimberly S. Johnson has over 15 years of journalism experience working at a wide variety of media organisations in the United States and abroad. She is currently a freelance financial journalist based in West Africa and serves as senior reporter for mergergate, a subsidiary of The Financial Times Group, focused on forward-looking intelligence on mergers and acquisitions and other deal flow information around the world. Johnson also contributes to GlobalPost.com, a news website focused on international news.

Prior to her work in Africa, Kimberly served as auto writer for the Associated Press in Detroit, and technology writer for The Denver Post. She has also held positions at The Boston Globe, New Haven Register and CNN. Kimberly holds bachelor and master degrees from Boston University’s College of Communication in Broadcast Journalism and Business and Economics Journalism, respectively.
Power sets barriers and the reporter pushes back against them—it’s an unwritten rule on which Colombian writer Gabriel García Márquez believed all journalistic work is based. Some governments, however, have begun to voluntarily lower these barriers by approving legislation designed to make information more accessible to their citizens.

To date, approximately 90 countries globally have freedom of information laws, which establish rules and deadlines for facilitating the collection of data. Even in (democratic) countries where no such specific statute exists, it is assumed that public access to information is guaranteed by the right to freedom of expression. Even in these countries, though, such laws certainly cannot guarantee transparency. In the first place, most people, including reporters, are unaware that they have the right to access information generated by their governments.
What follows are some suggestions and tips that can facilitate journalists’ work in requesting information from authorities, even in those countries where there is no specific law regulating the issue. If reporters gain access to accurate data, their stories will be of a higher quality and citizens will be better informed when making decisions involving the future of their societies.

**Some Key Points:**

**Where is the information?**

The first task of journalists looking for information must be to identify which state institutions have the information they need. Often, diverse government offices possess the same information, and, in the case of countries that do not have a specific legislation regulating the issue, these offices can also regulate the access to that information. Importantly, reporters should consider, from the start, that the information they are looking for might not be hidden in the desks of senior government officials, but also already available in public databases. Sometimes, they might also find the desired data in less bureaucratic locations, such as private institutions, regional offices of the major ministries, and so on.

**Is the information ‘secret’?**

Before making a formal application, journalists must make sure that the information required has not been classified as a state secret by the constitution or any other national law, or exempted by any other standard. All information that affects national security or involves financial or commercial secrets, criminal investigations (summary trials), or the private lives of ordinary citizens who do not occupy bureaucratic positions, is often restricted. Everything else is public: official statistics, the execution of budgets, and procurements of the companies who have a contract with the state, for example. Anything that is public—although it sounds obvious to say—should never be a secret.

**Less is more:** The more accurate the information request is, the more likely it is that journalists will get an answer that meets their expectations. Each application must be written in a simple way, identifying the data required as clearly as possible. It is very important to define the parameters: if journalists are interested in obtaining information for a specific time period, they must indicate it on the petition. Also note how the information should be expressed: as annual or monthly reports, for example.

**One question at a time:** When requesting information, journalists should ask one question at a time, thus requiring only one response from the public administration. It is better to make several requests for information, rather than taking the risk of writing a long list of questions that will end up unanswered.

**Polite but strong:** It is always advisable to invoke the law when making a request for information. When writing an application, mention the standards that guarantee the exercise of this right in every country, and the specific articles of the constitution or the laws on access to information, for example, depending on the case. In those states where a specific law to guarantee access to information has not been approved, appeal to some articles of international human-rights documents, including the Universal Declaration of Human Rights (Article 19), and the International Covenant on Civil and Political Rights (also Article 19)—or in the case of the American continent, the American Declaration of the Rights and Duties of Man (Article IV), the American Convention on Human Rights (Article 13), and the Inter-American Convention against Corruption (complete text). In democratic states, public officials, regardless of their rank, are duty-bound to provide timely and accurate information to citizens. However, as some officials may forget this fact, journalists—in respectful but firm language—should remind them as part of each information request.

**Proof of the request:** It is essential when they make the request for information that journalists obtain a signed and sealed copy of it from the public body or authority, to prove that the request was both made and received. It is also important to be in permanent contact with the officer who will answer the petition, to track the status of the request and clarify any doubt that may arise about specific data or required documentation.

**Persist, always persist:** Journalists must be persistent. If the first inquiry is not answered or the answer is incomplete or ambiguous, submit a second petition. If journalists make mistakes in the first application (lack of clarity about the information requested, for example), they should correct them. In cases where a second request is needed, the journalists’ tone should be even stronger to emphasize the legal obligation of all public officials in democratic states to provide information to citizens.

**Silence is also news:** Even when the laws and international treaties obligate public officials to report accurate and timely information, it is common that requests for information are not answered. Or, if they are, they do not meet journalists’ expectations because the information is incomplete or unclear. This is particularly common in states where there is no system to facilitate access to public information. But in many cases, lack of response is a deliberate government policy to deny the right to be informed. In that case, administrative silence can also become a story: a reporter can, for example, prepare a report based on the number of information requests that have not been answered and denounce the lack of transparency on a particular topic.

**Maye Primera** graduated from Central University of Venezuela in 2001. She has worked as a political reporter for various Venezuelan publications, including El Globo, El Mundo, and TalCito. She has also collaborated with the newspapers El Tiempo and El Espectador in Colombia, the Venezuelan newspaper El Nacional, and the magazines Gatopardo, Travesia, Poder, Complot, and Marcapasos. She is the author of *The Biography of Diógenes Escalante*, a book of interviews called The Defended Republic, and the extended report “Fires and Voices against Impunity”. Her work has been included in the anthologies Venezuelan Speaks Here and The Better than Fiction. Currently, she works as the Caracas correspondent for the Spanish newspaper El País and Argentina’s Clarín.

**Editor’s Tip:** Check out the resource section of this handbook for a list of organisations promoting government transparency. Many of these groups provide detailed information on national freedom-of-information (FOI) laws. You will also find a model letter for requesting information under FOI statutes.
The interview is one of the—if not the—most important tools we as journalists have to obtain information, to expand on information we may have from other sources, and to clarify facts and see things from different perspectives.

We use the interview to expand upon the basic “who, what, where, how, when and why” of newsgathering. This is true whatever beat we may be covering: health, economics, politics, or issues having to do with the Millennium Development Goals (MDGs).

In covering the issues of poverty eradication, corruption, gender equality, and environmental and health concerns, the interview is the way in which the voices of not only experts but also the people most affected by these issues will be heard. The interview is the manner in which the voice of the often-unheard poor, and others affected by MDG issues, will be brought to a larger public.

Unfortunately, many journalists believe interviewing is simply a matter of asking questions and taking down the responses. Often, we pay little attention to this important skill. But to be a truly effective journalist demands we hone our interviewing skills to an art. This comes with practice, and by following certain guidelines:

1. Prepare, prepare, prepare

The quality of the information we get from our interview greatly depends on the degree of preparation we put into it. It is important to know the background of the subject you are covering and at least basic information regarding the interviewee. Here is where previous files of clips from your station or newspaper come in, as well as the Internet and your library.

Prepare a list of questions before hand, or at least a bullet point list of topics you want to touch on. But do not be so glued to your list that you break the next rule of the art of interviewing.

2. Listen, listen and listen

Be an active listener, and be very present during your interview. Do not become so preoccupied with looking at your list of questions that you miss something the interviewee says which calls for a follow-up question.

Especially when interviewing ordinary citizens, be present and attentive. Often they are sharing their pain—be respectful of that effort by listening in a polite and active manner.

3. Ask yourself: What do I want to get out of this interview?

Are you doing the interview to get a quick quote or sound-bite? Are you writing or producing a profile of a subject, which would call for a longer time and perhaps several interviews in different settings?

If the interview is for radio or television, perhaps consider whether the person will be a good visual or aural interviewee. Here, pre-interviewing by phone before hand is a good idea.

Ask yourself: Do I have a focus for the interview? Do I have a plan?

4. Choose the best place

Decide if it is best to interview by phone (if you do not need to have the interview in broadcast quality), or in person. Sometimes, busy people will be willing to speak with you on the phone for 15 or 20 minutes, but might be reluctant to do an in-person interview, as they think it may take longer.

If you have a choice, think about where might be the best place to do the interview. If you are doing this for radio or television, think about the setting and the noise level.

5. Make your interviewee comfortable

Some people clam up when they see a microphone, or freeze when they hear the word “interview.” For the latter, you might say you want to set up some time to “talk” or to ask a few questions.

Make the person comfortable with some chit-chat before you start the interview. And if you are using audio or video recording equipment, explain it to them to put them at ease.

Be especially sensitive when interviewing victims or families of victims, be these people who have suffered some sort of crime or disaster, or are living under circumstances that the MDGs try to address. Remember that whatever the circumstances, people who agree to an interview or to be photographed are giving you not only their time, but in some ways, as some indigenous groups believe, they are giving you a bit of their soul. Be very grateful and sensitive to that gift, and be very present in the moment of that interview.

If your interviewee becomes emotional during the interview, give him or her a moment to compose themselves. It is okay to let them know that you understand their situation and that by their agreeing to the interview, others will also understand their position.

6. Maintain control of the interview

Do share the general focus of the interview with the interviewee. Do not, however, generally share your list of questions. This would result in a scripted, stilted interview.
If you are using a microphone, never lose control of the mike. Never let the person you are interviewing grab it from you.

If you are interviewing a public official or anyone else at an office, it is preferable not to do the interview across a desk—try to see if there is a sofa or other seating arrangement where you might do the interview without a big space/power symbol between you and the person you are interviewing.

A few more points of advice:

Asking difficult questions

It is generally a good idea to start off the interview with softer, less controversial questions. As the person you are interviewing becomes more comfortable, it may be easier to bring up the harder subject. You may want to phrase your question by attributing the assumption to a third party: “Your opponents say such and such ... How do you respond?”

The e-mail interview

Sometimes it is just not convenient or possible to interview someone face-to-face, or even by phone, so you can consider the possibility of doing an interview by e-mail. These are not ideal, either as an interviewer or an interviewee as details gained in a face-to-face interview are missed. There is no opportunity to make observational notes, which means nuances or a hesitation in a response that may be valuable are lost.

Practice, practice, and practice

The art of interviewing may be at the same time the simplest yet most difficult part of practicing journalism. Keep honing your art by trying to be better each time you do another interview.

What kinds of questions work well in an interview?

• Ask the person for his/her name and position up front.
• Ask open-ended questions that will elicit more than “yes” or “no” answers.
• Keep your questions neutral in tone.
• Ask for definitions, examples, anecdotes.
• Ask questions your audience/readers want to know the answers to.
• Keep your questions short and to the point.
• Ask one question at a time (do not double-up on questions).
• Be prepared to ask follow-up questions—and be sure to be listening for questions that require a follow-up.
• Do not make assumptions.
• Make sure you are asking a question, rather than making a commentary.
• Do not argue with the person you are interviewing.
• Do not try to cover too much territory during the interview. Remember your focus.
• Be polite, but persistent. Keep asking until you get a response to your question.
• Prepare a closing question.
• After the interview is over, ask if there is something he/she would care to add (This often elicits a very useable interview segment). Also ask if he/she recommends other people to interview ... and if you may contact him/her should you have further questions or need to clarify.

Tips for managing an e-mail interview:

1. Often, when I am asked to do an e-mail interview, I receive a long list of questions to which a thoughtful response would take up much more time than I have. So if the only option is an e-mail interview, first of all, do be thoughtful of your source’s time and limit yourself to no more than three to five questions.
2. Identify yourself and your news organization to your source. Let them know how you came to contact them. Where did you find their name and contact? When you send your questions, also ask for the opportunity to ask follow-up or clarifying questions should you have any.
3. Let them know what your deadline is. Follow up if you have not heard from them, and also send your questions to several sources, especially if you are on deadline.
4. Once you have received a response, do follow up to ask for clarifications if you have the need. Then be sure to send a thank you note with an offer to send a link to your finished article (Do follow up on the latter if you made the offer).
5. With the widespread availability of Skype, I prefer to use this technology for phone interviews. There are a number of programs that let one easily tape these interviews (be sure to let your sources know you are taping the interview).
6. Whether you use phone, Skype, or the Internet, be sure to prepare for your interview.

Maria Emilia Martin is a pioneering public radio journalist and the recipient of over two dozen awards for her work covering Latino issues and Latin America. She started her career at the first community public radio station owned and operated by Latinos in the U.S. Since then, she has developed ground-breaking programs and series for public radio, including NPR’s Latino USA, and Después de las Guerras: Central America after the Wars.

A recipient of Fulbright and Knight Fellowships, she has extensive experience in journalism and radio training in numerous countries in the Americas, including the U.S., Mexico, Guatemala, and Bolivia. Martin holds a master’s degree in Journalism from the Ohio State University, and currently heads the GraciasVida Center for Media and GraciasVida Productions based in Austin, Texas and Antigua, Guatemala.

Putting the MDGs in Context

Energy Poverty: The “Missing MDG”  OPEC Fund for International Development (OFID)  128

The Way Forward: Thoughts on What Comes After 2015  UN Development Programme (UNDP)  134

Key Resources and Contacts  140
Much has been said in previous chapters about the motivation and process behind the introduction, in 2000, of quantitative goals to ease some of the world’s most pressing human and social issues by 2015. These issues were not new, but until 2000 no collective global effort had been made to address them. The objectives that were agreed upon in 2000 are better known today as the Millennium Development Goals (MDGs).

Notably, the MDGs constitute one of the few instances in which the United Nations has led a global effort to coordinate a comprehensive human and social agenda, approved by governments, international development institutions, NGOs, and other parties. This united effort received widespread recognition from governments, academia, media, development institutions and practitioners alike, as the specific targets could be measured, followed, and ratified.

A few years after 2000, on the way to the target year of 2015, another pressing social issue started to appear: energy poverty. It had become clear that the relevance of energy to development had not been properly recognised during the founding of the MDGs. At the time, the lack of access to safe, reliable, and affordable energy sources was not associated with what were considered the more essential problems of hunger, health, and education.

Various organisations, individuals, groups, and institutions, including the OPEC Fund for International Development (OFID), took up the urgent call to address this issue, and their determination and perseverance has helped to highlight the vital link between energy and development. As a development finance institution, OFID has been widely recognised as one of the pioneers in championing this theme at the international level, combating energy poverty through its Energy for the Poor Initiative (EPI), launched in 2008.

Two years later, in 2010, the UN announced its decision to mark 2012 as the Year of Sustainable Energy for All (SE4ALL), an initiative that launched international efforts to achieve universal energy access by 2030. UN Secretary-General Ban Ki-moon has called energy ‘the golden thread that connects development, social inclusion and environmental protection’, stating that ‘achieving sustainable energy for all is not only possible, but necessary’.

Various initiatives, most significantly the 2012 SE4ALL, have brought the world’s attention to energy poverty and have demonstrated the imperative need to tackle this problem in order to meet the MDGs. Due to the link between poverty and a lack of access to energy, and in order to maintain international focus on the issue of energy poverty, the UN General Assembly announced in December 2012 that it would name the period from 2014 to 2024 the Decade for Sustainable Energy for All. However, while the news media has covered the MDGs—
though as this handbook indicates, not enough—the international press has not exposed energy poverty and its concurrent problems to the same extent.

**What is energy poverty?**

Energy poverty may be defined as the lack of adequate, accessible, and affordable energy to satisfy basic human needs and promote economic growth.

According to the International Energy Agency (IEA), over 1.3 billion people—i.e. one person in every five—lack access to electricity and the concurrent advantages it provides for learning, working, driving industry and business, and running hospitals and schools. Similarly, 2.6 billion people—over a quarter of the world’s population—live without clean energy facilities, using instead wood, charcoal, or animal waste to cook food and heat their homes, exposing them to the kinds of dangerous smoke and fumes that kill nearly two million people a year.

Without access to energy, it is not possible to eradicate poverty. In the pursuit of economic growth, all developing countries need reliable power supplies in order to fuel industry and commerce, and enable public institutions. Therefore, the alleviation of energy poverty is a key pillar towards attaining the MDGs and achieving comprehensive, sustainable development. That is why OFID has named the eradication of energy poverty as the Ninth Millennium Development Goal.

**Energy poverty alleviation: Advocacy and action**

Since its establishment in 1976, OFID and its Member Countries have put words into action and shown their commitment to the elimination of poverty and its attendant human misery. OFID has been at the forefront of raising the profile of energy poverty on the international agenda, largely through the EPI, which was launched in direct response to calls made at the 3rd OPEC Summit, held in Riyadh, Saudi Arabia, in November 2007. During that gathering, Member Countries acknowledged the ‘strong interrelationship between energy and development’ and committed ‘to continue to align the programmes of our aid institutions, including those of the OPEC Fund for International Development, with the objective of achieving sustainable development and eradication of energy poverty in the developing countries [...]’.

OFID approaches the challenge on two fronts: through advocacy and through the allocation of specific resources to those in need. Working with a wide network of partners and utilising all the financial instruments at its disposal, including a newly established special grant account for Energy Poverty Operations, OFID has considerably maximised its efforts in this latter area. In the two-year period from 2011 to 2012, the share of energy financing reached 39% of total OFID operations, compared to 20% on a cumulative basis since inception. These activities are spread worldwide and cover a diverse range of operations, from infrastructure and equipment provision to research and capacity building.

Advocacy efforts have been undertaken since 2008 when a workshop was held in Abuja, Nigeria, to discuss energy poverty in Africa. The culmination of OFID’s advocacy work, however, came in June 2012 with the release of a Ministerial Declaration on Energy Poverty, announced at the Rio+20 Summit. Issued by the Ministerial Council, OFID’s highest authority, the Declaration reaffirmed the commitment of Member Countries to the eradication of energy poverty and announced a provision of $US 1 billion to finance the EPI, an amount that may be increased in order to meet extra demand.

Further, in 2012, as part of the UN Secretary-General’s High-Level Group on Sustainable Energy for All, the institution contributed to the development of the Action Agenda that was submitted to the Rio+20 Global Summit, at which OFID was an active participant in its own right as well as part of the Group.

**Energy poverty alleviation: Technology & environment**

While the prospect of providing energy to those who lack it inevitably raises environmental concerns, research by the IEA suggests that such fears are unfounded. According to their 2009 publication, World Energy Outlook, if electricity were provided to all people worldwide, global energy-related CO2 emissions would increase by only 0.9 – 1.3 percent by the year 2030, depending on the penetration rate of clean energies in the energy mix.

It is widely accepted that, in order to achieve universal energy access, all energy options, including fossil fuels and renewable, should remain open. Among the latter group, solar energy and modern sustainable biomass are...
highly suitable for numerous, local, off-grid applications because their technologies and economies have improved drastically over the years. In areas like transportation, hydrocarbon fuels play a leading role. The international community’s strategy should thus remain technologically neutral: solutions may involve renewables as well as fossil fuels, with neither having precedence over the other. The priority is to provide energy, in whatever form possible, to alleviate the extreme suffering of the poorest in the world and to break the economic divide.

**Energy poverty alleviation:**  
**Tips for reporting**

In order to report effectively on Energy Poverty, it is important to consider the following:

- What steps are being made in your country/region to ensure:
  - Reliable and affordable electricity access
  - Accessibility and/or cost
  - Review of energy rates and affordability for poor consumers
  - Adequate investment for energy access in urban and rural areas, including assessment of the existing infrastructure and maintenance:
    - for households
    - for community, education and health services
    - for industry, agriculture and transportation
  - The three pillars of SE4All
    - Ensure universal access to modern energy services
    - Double the global rate of improvement on energy efficiency
    - Double the share of renewable energy in the global energy mix

**Sample Articles (Notes from the Field)**

I. Yemen: “Harnessing the power of the wind”

Energy poverty is a very real problem for the people of Yemen, with over fifty percent of the population lacking regular access to electricity. The situation is even more severe among poor and rural communities, which comprise nearly half the country’s inhabitants. A rapidly increasing population and industrial growth are putting even more pressure on the sector, which is oil-dependent. In order to meet the basic needs of the population, the country is seeking to broaden its energy base to include alternative sources.

Yemen’s known oil and gas reserves are limited and quickly being used up. However, the country is uniquely placed to make use of significant renewable resources such as geothermal, solar, and wind. To assist the government in its effort to bolster the power sector and meet growing demand, OFID is co-financing the Al Mocha 60 MW Wind Park Project. As a clean source of energy and the least expensive form of alternative energy, wind power will not only provide underserved communities with a reliable and cost-efficient energy supply but will also diversify and enhance Yemen’s economy.

The project is expected to significantly improve the quality of life for approximately 75,000 inhabitants in the western part of the country by providing income-earning opportunities, and, more importantly, a reliable source of clean energy.

II. Latin America and the Caribbean: “Innovative facility addresses energy deficiencies”

Although the Latin America and the Caribbean region is relatively rich in energy resources, supply and access to these resources is unevenly distributed. Around 31 million people lack access to electricity services, while some 65 million rely on biomass for their cooking and household needs. The Energy for the Poor Projects and Policies Preparation Facility has been set up jointly by OFID and the Andean Development Corporation to help address these deficiencies.

With an initial allocation of US$1.6m—an amount shared equally between the two partners—this innovative facility will seek to identify and prepare projects that will improve energy access among the region’s poor.

The Facility will benefit 14 countries, specifically Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Dominican Republic, Jamaica, Mexico, Panama, Paraguay, Peru, Trinidad and Tobago, and Uruguay. Priority, however, will be given to the most underserved among them.

Activities encompass various areas within the energy sector, including energy access, analysis and research, capabilities improvement (i.e. government regulations improvement and training), capacity building, and support to SMEs dealing with energy production/distribution. In terms of energy provision, the Facility will consider all available sources, including renewables.

A wide range of entities—both public and private—are eligible to apply for financing under the Facility, among them government agencies, NGOs, community groups, international organizations, and any private enterprise or agency.

Key Facts about Energy Poverty

- The amount of investment needed to achieve universal energy access by 2030, estimated by the IEA, is between US$35 billion and $40 billion per year.
- An estimated one billion people are served by health facilities without electricity.
- Over 291 million children go to primary schools without electricity.
- Almost 50% of vaccines in developing countries are ruined due to poor refrigeration services.
- Electric lighting allows schools to operate outside of daylight hours for evening classes and homework.
- Street lighting promotes safety, encourages school attendance, and enables economic activity.
- Of those people who have access to standard lighting from grid electricity, many are still deprived due to unreliability of supply.
- Even when infrastructure is in place and energy is available nearby, low-income households are faced with pressing questions of affordability.
- Agriculture is the primary earning activity of some 2.5 billion people. 45% of the developing world’s population; the productivity of irrigated land (for which energy is needed) is more than double that of rain-watered land.
- For the hundreds of millions of undernourished people in developing countries, the capacity to preserve food (for which energy is needed) is an important component in tackling hunger.
- To guarantee universal energy access by 2030, and to maximize the potential it has for helping poor people earn a decent living and escape poverty, the energy access ecosystem must be enhanced.
- Only policy can set the framework for enabling energy access for the poorest.
- Some of the most effective and innovative ways of reducing costs are in the area of financing; grants, loans, and subsidies targeting poor consumers are an essential element of the energy access ecosystem.
A mother walks with her seriously malnourished child at a feeding centre run by German Agro Action (GAA) in the village of Nosy Varika on the eastern coast of Madagascar.

The Way Forward: Thoughts on What Comes After 2015

UN Development Programme (UNDP)

What we have learned from the MDGs

The Millennium Development Goals (MDGs) have been a tremendous success at many levels. First and foremost, they turned the tide in terms of international attention on development. By introducing time-bound, quantitative targets, which operationalised otherwise aspirational goals, they allowed the international community to measure development progress against specific benchmarks.

With the scope and breadth of development well defined at the global level, and later at national levels, the international community learned how to apply the MDGs to national planning processes at different levels, as necessary by each country’s typology. By reviewing the data, it is clear to see that the MDGs have provided a strong political impetus for development, through:

- Bringing renewed attention to development;
- Reversing the downward trend in aid seen in the 1990s;
- Drafting the Millennium Development Compact to reform the global approach to development.

1 Bourguignon, P et al; Millennium Development Goals at Midpoint: where do we stand, where do we need to go, European Report on Development, Brussels, September 2008

The responsibility of the media is to question the existing status quo, to bring to task the current development model, as well as the vested interests that underpin the assumptions underlining that model.
The MDGs, unanimously adopted by UN Member States in 2000, also represent a movement involving citizens, communities, and civil society all holding their governments accountable to the United Nations Millennium Declaration.

Critically, the MDGs have taught us that development occurs when:
• There is effective government leadership and national ownership of development strategies;
• Effective policies support implementation;
• There is improved quantity, quality, and focus of investments, financed—with a holistic approach—both by domestic sources and international development assistance;
• There is effective monitoring and evaluation, and appropriate institutional capacity to deliver quality services on a national scale;
• There is empowering civil society and community involvement;
• There are effective global partnerships with mutual accountability of all stakeholders;
• There is good governance by donors and recipients.

Despite this, the MDGs have also received strong criticisms, mainly because:
• The normative issues contained in the Millennium Declaration, such as human rights, peace, governance, equity, and non-discrimination, were lost by focusing on quantitative time-bound goals;
• The MDGs represent a minimalist approach to development;
• Global MDGs were not tailored to national contexts, and global yardsticks were used to assess national progress without taking into account the reality on the ground;
• MDGs are not universal—with time-bound responsibilities for developing countries, and not for developed countries.

UNDP alone has supported the development of MDG-based National Development Strategies in over 60 countries.
The way forward

Today, most countries have in place strategies that are technically sound, and for the most part MDG-based. Furthermore, there has been tremendous progress globally with regard to the MDGs, yet not all the MDGs have progressed equally. Despite this fact, more than two-thirds of the countries that are on track are close to being so, and to better achieve the MDGs in future, we have a wealth of cumulative evidence of what works and does not work, and under which circumstances.

Thus, at the 2010 MDG Summit in New York City, the international community focused on what could be done to accelerate MDG achievement. In particular, attendees encouraged a focus on sustainability, acknowledging that we live in a world where volatility is the new normal, one in which shocks and crises stemming from economic, political, climate, food, and energy risks are ever more frequent. Attendees also recognized that there are synergistic returns on investments in

1. Women’s empowerment;
2. Health;
3. Education;
4. Environmental sustainability and resilience;
5. Employment-intensive growth;
6. Agricultural innovation; and
7. Energy access for all.

As we approach the 2015 mark, efforts to accelerate MDG achievement are in full swing—and so are the discussions on what kind of post-2015 development framework should follow.

Despite the wide variety of proposals, there are certain basic principles that underlie the process driving the creation of a new development framework:

- The lessons learned from the MDGs, including the global political impetus for development, should be the basis of a post-2015 development framework;
- The process to agree on a new post-2015 framework should be transparent, participatory, inclusive, and Member State-driven, while remaining anchored in the UN System;
- The post-2015 framework must be anchored in the logic of universal applicability, with a common, but differentiated, responsibility.

Any development framework for post-2015 must also take into account how the context for development has changed since the MDGs were agreed. Among others, it will need to consider climate change and environmental vulnerability, recent crises and volatility arising from economic globalisation, the changing nature of global governance, patterns of inequalities between and within countries, as well as trends relating to technology, demography, urbanisation, and migration.

At the UN Conference on Sustainable Development held in Rio de Janeiro in June 2012, the political drive for achieving sustainable development was established. Sustainable Development was defined as the “interlinkage” of “economic, social, and environmental aspects” of development. It was established that the process of creating a post-2015 framework would be comprehensive and participative, including the process of establishing a global set of universal development goals—the Sustainable Development Goals (SDGs). The international community also reaffirmed its commitment to poverty eradication as the heart of any future development agenda.

But it is crucial to keep in mind that a development framework is bigger than a set of SDGs. In setting out his vision for developing a post-2015 agenda, UN Secretary-General Ban Ki-moon, announced a strategy that aims at continuing to position the UN as an advocate for, and facilitator of, a bottom-up and inclusive approach defined by national and local priorities. The strategy includes extensive national consultations, which are already under way, and the convening of a High Level Panel in the summer of 2012, with the goal of producing a report by May 2013.

UNDP, as chair of the UN Development Group, is currently leading an initiative that aims to:
- Build a strategic coalition of partners to shape the post-2015 development agenda, through broad engagement of poor and vulnerable people, governments, NGOs and grassroots organisations, the private sector, trade unions and workers, and the academic community;
- Ensure that the post-2015 development agenda accounts for the changing development context and critical challenges of our time, builds on the momentum of, and lessons learned from, the MDGs, and is guided by core UN norms, values, and commitments.

Finally, the evidence and perspectives generated through these activities will be synthesised and integrated into the work of the High Level Panel that the UN Secretary-General convened in 2012.

Attendees[ at the 2010 MDG Summit] acknowledged that we live in a world where volatility is the new normal, one in which shocks and crises stemming from economic, political, climate, food, and energy risks are ever more frequent.
I. Sample Letter to Request Information under Freedom of Information (FOI) Laws

Prepared by and reprinted with the permission of the International Consortium of Investigative Journalists (ICIJ)

How to draft a letter

1. Determine what records you need

Generally, an item in custody or control of a federal agency is considered a record (see suggested resources for a more detailed definition of “public record”). The form of the record does not matter; it can be a printed or typed document, photograph, tape recording, map, or computer disk. When filing the request, describe to the best of your ability the document you are seeking. If you want a specific report or data, it helps if you can cite the agency’s exact title or wording in your request. Specificity also may help save you money because most agencies will charge fees for processing the request. Depending on the nature of your work, you might be eligible for fee waivers (see sample request letter).

2. Identify the agency that has the records

In many countries there is no central government records office that processes FOI requests; therefore you must address a FOI request to a specific agency. If you are unsure which agency has the records, you may wish to make FOI requests to more than one agency.

Indian widows make flower garlands in an ashram or shelter for widows in Vrindavan, northern India, who have been ostracised and are living in poverty. EPA/Anindito Mukherjee
Sample request letter for public records covered by a Freedom of Information Act:

(Date)
Freedom of Information Act Officer
Name and Complete Address of Agency
RE: Freedom of Information Act Request

Dear FOI Officer:

Under the Freedom of Information Act (cite name of the act here), I am requesting the following documents:

Reasonably describe the records and/or information you need. It helps to include names of people and places and the time period relevant to the material. If you know the name or title of the document you seek, include that. Attach any other documents describing your research and specify the form in which you would like to receive the information, such as paper or computer disk.

(Explain your background and the nature of your work, such as) As a representative of the news media affiliated with (name of your organization), I am gathering information on (subject) that is of current interest to the public because (brevity state reasons). This information will be disseminated to the general public. (If you are a freelancer, describe your work experience and mention any publication contracts to explain that the information will be presented to the public.)

(Optional fee-waiver request) Please waive any fees for record retrieval or copying associated with this request. Release of this information is in the public interest, because it will contribute significantly to understanding of government operations and activities. In the event that you deny my fee waiver, I agree to pay up to (state amount in local currency) for reasonable costs. However, please notify me prior to your incurring any expenses in excess of that amount.

(Suggested request for fee benefit as member of news media) As a member of the news media, I am required to pay only for the direct cost of duplication after the first 100 pages.

If my request is denied in whole or in part, I expect a detailed justification for your decision. I also request that you release any segregable portions of otherwise exempt material. I, of course, reserve the right to appeal your decision to withhold any information or to deny a fee waiver.

A request for expedited review may be considered under two conditions. You must be a reporter or an individual who is “primarily engaged in disseminating information,” and your request must be a matter of “compelling need.” If you satisfy these conditions, include the following description:

Please honor expedited review of this request. This information is of timely value and of significant interest to the public. (Optional) This information concerns a matter of urgency. (Explain the urgent and timely need for distributing the information to the public)

I certify that my statements concerning the need for expedited review are true and correct to the best of my knowledge and belief. I look forward to your response within 20 working days (or as outlined by the specific statute in your country). Please contact me by telephone, mail, or e-mail, if you have any questions regarding this request.

Thank you in advance,

YOUR SIGNATURE
Your name and full address (including country and daytime phone number; optional: fax number and e-mail address)

3. Compose the letter

Most countries and agencies will require a written FOI request. The letter can be simple, as long as it contains the necessary information. The letter should:

• Address the request letter to the agency’s FOI Officer.
• In the letter, state that the request is being made under the country’s Freedom of Information Act.
• In the letter, reasonably describe the records you need. If you are requesting records in a form other than paper, describe how you would like to receive the information.
• Include a statement about the fees, either your request for a fee waiver or your agreement to pay the necessary costs.
• Remind the agency of the time limits on your request. Some FOI acts require a response within a set period of working days.
• Include your name and postal and e-mail addresses in the request, so the agency can contact you with questions regarding the letter, if necessary.
• Write “Freedom of Information Act Request” on the outside of the envelope containing the letter, in the bottom left-hand corner.
• Keep copies of your request letter and related correspondence until you receive the information. If and when your request has a FOI ID number, refer to it in all future correspondence.

4. Follow up your filing

After allowing time for your request to arrive, telephone the agency’s FOI Officer to be certain it was received. Ask to speak directly with the officer processing your request. Your request may be denied entirely or in part, but the agency may be required to explain the reasons for denial. In some countries, you have the right to appeal any denial to the head of the agency and, if necessary, beyond that through the court system.

II. Useful Dates

These international occasions can provide opportune moments to cover a particular development theme. IPI has provided suggestions on how to link these events to stories on the MDGs.

The following dates are observed by UN member states and established either by the General Assembly itself or by UN organisations such as the WHO or UNEP. For more information, please the official site of the United Nations Observations: www.un.org/en/events/observances/index.shtml

World Cancer Day, 4 February

III. MDG Resource Guide

IPI has compiled a set of useful resources and contacts for journalists covering topics related to the Millennium Development Goals (MDGs). While certainly not exhaustive, the links below may help point the intrepid reporter in the right direction.

Where can I find statistics on progress toward the MDGs?

Getting Started

• UN MDG Reports: www.un.org/millenniumgoals/reports.shtml
• The World Bank has put together a comprehensive list of sources for statistics and information on MDG progress, sorted by goal: data.worldbank.org/about/sources-of-data-and-info-about-mdgs

General Sources for Human Development Data

• OECD Statistics: www.oecd.org/statistics/
• UN Statistics Division: unstats.un.org/unsd/default.htm

• UN Data: http://data.un.org/
• UN Environmental Statistics Section unstats.un.org/unsd/environment/default.htm
• UN Women Statistics and Resources: www.unwomen.org/resources/
• UNICEF Statistics and Resources: unicef.org/statistics/index_29394.html
• UNFPA Statistics and Publications: www.unfpa.org/public/home/publications
• UN Water Statistics Portal: www.unwater.org/statistics.html
• WHO Global Health Observatory: www.who.int/gho/en/
• World Bank Monitoring the MDGs Program: go.worldbank.org/AEC2E7FUFU
• World Bank Development Database: data.worldbank.org/

Further MDG and Human Development Statistics / Resources by Region

Africa:

• UNECA Statistics Division: new.uneca.org/acs/home_acs.asp
• UNECA Publications and Resources: http://new.uneca.org/Publications.aspx
• Southern African Development Community Statistics: www.sadc.int/issue/Statistics/

Europe:

• UNECE Statistics Division: www.un.org/esa/statistics/

Latin America and the Caribbean:

• ECLAC Statistics Division: www.eclac.cl/mdg/
• ECLAC MDG Resources: www.eclac.cl/mdg/
• CARICOM Regional Statistics Page: http://caricomstats.org/index.htm

Asia and the Pacific:

• UNESCAP Data Division: www.unescap.org/research
• Asian Development Bank / ADB: Statistics and Databases: www.adb.org/data/statistics
• Statistical Contacts in all ADB Member States: www.adb.org/data/contact-members

Arab States:

• UNESCWA Information Division: www.unescap.org/en/infrastructure/category.asp?category=Studies
• Arab NGO Network for Development Resources: www.annrd.org/english/publication.php
• Islamic Development Bank Resources: www.isdb.org/en/jsp/portal/anonymous/NavigationTarget=navigationServlet;J96d97a5309f16b3a9f9e44f335a

Where can I learn about the terminology used in MDG reports and in international development programs?

• BBC Guide to Development Speak: www.bbc.co.uk/worldservice/specials/06_dev_speak/index.shtml
• UNDP Glossary of Terms: htds.undp.org/en/humanities/glossary/

Jóhanna Sigurðardóttir, Prime Minister of the Republic of Iceland, speaks during the Millennium Development Goals Summit at United Nations headquarters in New York City on Sept. 22, 2010. EPA/Andrew Gombert
Where can I find research material and background information on issues related to human development?

**Government and Social Development Resource Center (GSDRC)**

‘GSDRC provides applied knowledge services on demand and online. Our expertise is in issues of governance, social development, humanitarian response and conflict. Our specialist research team supports a range of international development agencies, synthesising the latest evidence and expert thinking to inform policy and practice.’

www.gsdrc.org/

**GSDRC Development Guides**

Topics including gender equality, climate change, justice, conflict and more; each topic area provides resources, background information, and statistics. www.gsdrc.org/go/topic-guides

**Global Development Network**

‘GDN is a knowledge hub that brings together and communicates policy-relevant research from the Global South.’

cloud2.gdn.org/cms.php?id=global_development_research

International Policy Center for Inclusive Growth (UNDP)

Online catalogue of development networks that share development-related information.

www.dpc-undp.org/ProNetNew.do?active=5

International Development Research Centre (IDRC)

‘To achieve self-reliance, poor communities need answers to questions like: How can we grow more and healthier food? Protect our health? Create jobs? A key part of Canada’s aid program since 1970, IDRC supports research in developing countries to answer these questions.’

The International Institute for Environment and Development

The International Institute for Environment and Development is a global leader in sustainable development, its mission to build a fairer, more sustainable world, using evidence, action and influence in partnership with others.

MDG Site: www.iied.org/achieving-millennium-development-goals

UNICEF

UNICEF’s work continues with the Millennium Development Goals set by United Nations States in 2000—a central task is to meet them. Of the 48 indicators of progress toward the Goals, UNICEF is chiefly responsible for progress in 13.

MDG Site: www.unicef.org/mdg/index_unicefindex.htm

UN Convention on Combat Desertification (UNCCD)

‘The UNCCD is the sole legally binding international agreement linking environment and development issues to the land agenda in those countries experiencing serious drought and/or desertification, particularly in Africa. By controlling and reversing desertification, curbing the effects of drought and restoring productive lands, there is an opportunity to make a direct positive contribution to reducing poverty, improving people’s lives and meeting the targets of the Millennium Development Goals.’

UN Economic and Social Commission for Asia and the Pacific (UNESCAP)

ESCWA identifies emerging and strategic socio-economic development issues in the ESCWA region, including the social impacts of globalization, social dimensions of urban development, and the overall monitoring of the Millennium Development Goals in the region.

UN Economic and Social Commission for Western Asia (UNESCA)

ESCWA ‘identifies emerging and strategic socio-economic development issues in the ESCWA region, including the social impacts of globalization, social dimensions of urban development, and the overall monitoring of the Millennium Development Goals in the region.’

UN Economic Commission for Latin America and the Caribbean (UNECLAC)

‘ECLAC has been working in supporting country policies and in improving monitoring systems to reach the Millennium Developing Goals.’

MDG Site: www.eclac.cl/mdg/default.asp?idioma=IN

UN Economic Commission for Africa (UNECA)

‘The ECA undertakes comprehensive secondary and empirical research to support policy making and programming for inclusive, equitable and sustainable development in Africa.’

List of Sub-Regional Offices: www.uneca.org/pages/subregional-offices

UN Economic Commission for Europe (UNECE)

‘UNECE contributes to the latter objective of economic cooperation and integration (MDG B), in particular through its activities in trade facilitation and border-crossing, as well as pan-European and Euro-Asian transport links, which are directly related to the targets on international trade and landlocked countries as contained in MDG 8. Through its environmental programme and its gender-related activities, UNECE also contributes to the achievement of MDGs 3 and 7, respectively. The Protocol on Water and Health, linked to UNECE Water Convention, also helps achieve some targets of MDG 4.’

UN Environment Programme (UNEP)

‘UNEP supports assessments of environmental conditions and trends including building the capacity of its many partners to generate the information necessary for sound environmental decision making to support sustainable development and the achievement of the Millennium Goals.’

UN Millennium Campaign

‘The UN Millennium Campaign supports and inspires people from around the world to take action in support of the Millennium Development Goals.’

UN Population Fund (UNFPA)

‘All eight MDGs touch essential aspects of women’s well-being, and in turn, women’s empowerment is critical for achieving the goals. UN Women has engaged in advancing the MDGs through three entry points: operational programs, monitoring and analysis, and advocacy.’

List of Field Offices: www.unfpa.org/public/home/elements/484/MDGs/pid/626

Women’s Environment and Development Organization (WEDO)

‘WEDO promotes and protects human rights, gender equality and the integrity of the environment.’

World Health Organization (WHO)

‘Working with partners to support national efforts to achieve all the health-related MDGs is core business for the WHO.’

List of WHO Regional Offices: www.who.int/about/regions/en/index.html

World Food Program (WFP)

‘Born in 1961, WFP pursues a vision of the world in which every man, woman and child has access at all times to the food needed for an active and healthy life (...) On average, WFP aim to reach more than 90 million people with food needed for an active and healthy life (...) On average, WFP aim to reach more than 90 million people with food.’

Is there anything else I should know?

Yes! You should know that many organisations around the world, including the International Press Institute (IPI), work every day to protect the rights of journalists and support the media’s role in holding governments and special interests accountable to the people and to development agreements. Freedom-of-expression NGOs can be valuable sources of support and can advocate for you if you run into trouble. The International Freedom of Expression Exchange (IFEX) keeps a list of its members around the world here: www.ifex.org/our_network

“Pink Gold Rush” Syed Zain Al-Mahmood 160

“Medicine vs. Myth in Sierra Leone” Nele Maiin Obermuller 164

“Tereso is Just One Example” Mario Alejandro Mejia de Loza 168
Saleha Khatun, 27, faces an uncommon occupational hazard on her way to get water every morning—tigers on the prowl. Saleha’s village, Madhyapara, in the Dakope upazila of Khulna district, is at the edge of the Sundarbans—the largest mangrove forest in the world and home to the Royal Bengal Tiger.

Struggling for the water her family needs to live, Saleha hikes twice a day from her dirt-floor shack to a hand-pumped tube well on the premises of the nearest school, roughly four kilometres away. Carrying her kolshi or local earthen pitcher, she has to run the gauntlet along a lonely path parallel to the river, with only the narrow stretch of water separating it from the great mangrove forest.

Tiger attacks kill up to a hundred people in the Sundarbans area every year. Two years ago, one of Saleha’s cousins lost her life while collecting firewood. But despite the risk, Saleha feels she has no choice. Although their village is surrounded by water, Saleha and her neighbours don’t have a drop to drink.
The salt trap

‘They dug ponds and let in salt water’, said Saleha, indicating with a sweep of her arm the broad expanse of dirty brown water surrounding her home. ‘We have to walk miles to get around the shrimp farms. Nothing grows around here anymore—no rice, no vegetables. The salt has ruined everything.’

Bangladesh lies at the forefront of climate change, and creeping salinity from the Bay of Bengal has been identified as a major threat. But many experts have blamed local factors, such as extensive shrimp farming, for accelerating the process of salinisation. Encouraged by strong demand in Europe and North America, Bangladeshi businesses have invested in thousands of acres of shrimp farms, dramatically altering the coastal landscape. What used to be a region of green rice fields has now become a stark and watery wasteland.

Dr MG Neogi, a consultant with the International Rice Research Institute (IRRI), says industrial shrimp farming not only spreads salinity in surface water but taints ground water as well. ‘Large scale pumping in of salt water in shrimp ponds is common in aquaculture farm areas’, he explained. ‘Large intake of groundwater lowers the water table, and salt water seeps into the aquifers.’

Some villages are fighting back. Groups of farmers are reclaiming land lost to shrimp enclosures and reverting back to traditional rice farming. But the largest farms—mostly owned by absentee landowners, continue to operate—with disastrous consequences. Once a bread basket for Bangladesh, the south has now become a gigantic shrimp farm for overseas markets.

Bonanza

Hailed in the 1990s as an effective adaptation to a changing climate, shrimp farming has undergone a phenomenal growth in the coastal belt. Today shrimps are big business for Bangladesh, ranking as the second highest export earner behind garment products, raking in foreign currency worth more than $450 million annually. According to a study by the government’s Soil Resources Development Institute, salinity and pollution caused by export-oriented shrimp farming over the last three decades have damaged the soil fertility of more than a million acres of coastal agricultural land that could have yielded 2.5 million tonnes of rice—a loss that could dent the country’s annual food deficit.

Asfara Ali, a rice farmer in the Dakoape area of Khulna, explained why it was difficult to hold out against the large shrimp companies: ‘The shrimp farms need to hold salt water within the enclosures and block the salt water seeping in. But for many analysts the “pink gold” has lost its glitter. Rezaul Karim, a rural planning expert at the University of Khulna said the rush to farm shrimp was a perfect example of unchecked commercial greed trumping the needs of the marginalized local population.

The shrimp conundrum

Experts say the Bangladesh shrimp industry highlights the problems that arise when economic policies are drawn up without regard to social and environmental objectives. Many blame the government for a lack of regulatory oversight and for allowing a get-rich-quick attitude to flourish.

‘We need the export earnings’, said Dr Tareque Salehin, an economist at Dhaka University. ‘But if industrial shrimp farming is to be sustainable, planning and management must be more effective and sensitive to the needs of local communities.’

The government currently offers shrimp exporters a lucrative 15 percent cash incentive on total export value, and Safiul Islam, a senior official at the Board of Investment (BOI) said it was trying to promote “semi-intensive” shrimp aquaculture. He claimed the government was involved in developing “initiatives of quality assurance in cooperation with exporters.”

Dr Neogi of IRRI says the proliferation of industrial shrimp farming has not only had an impact on the water and soil but also on the local workforce: ‘Local farmers used to hire around 100 workers for every acre’, he said. ‘For shrimp, they only need a couple of guys for the same task to work as caretakers’, he said. ‘That has increased unemployment in the region. Many are leaving to join the ranks of the urban poor.’

In a 2004 study, the Environmental Justice Foundation (EJF) noted that increased demand for warm-water shrimp species in the West has prompted a shift toward a “slash and burn” style of aquaculture because the networks of large, human-made ponds have to be abandoned after five or six years due to disease and poor water quality.

Even though Mamie Kemokai has had 12 children, she hesitates to call herself a mother. ‘Not one of my children is still with me today, not one’ she says quietly, her right hand cutting through the air emphatically before falling to rest limply in her lap. Kemokai lives in the remote village of Bendu Kpaka, around 200 miles south of Freetown, the capital of Sierra Leone. As she tells her story, rain pelts down outside, turning the one dirt road that leads through the 30-house settlement to a mud slick.

Sierra Leone has the highest rate of under-five mortality in the world, according to a Unicef report published this year. Nearly one in five children die before their fifth birthdays, despite President Ernest Koroma’s introduction of a free healthcare programme in 2010 for under-fives, pregnant women, and breastfeeding mothers. In Kemokai’s case, 10 of her 12 children died before their first birthday.

About the Prize: The Guardian International Development Journalism Competition was launched in 2008 to challenge exciting new voices in journalism to write about some of the most vital issues facing the developing world. The competition is run in partnership with a group of UK-based international non-governmental organisations (NGOs)—and is now in its fifth year. It was created with the support of Marie Stopes International and is run in partnership with Barclays and GlaxoSmithKline. Details on the contest can be found at www.guardian.co.uk/journalismcompetition.
I don’t think the free healthcare initiative has failed; it just faces many challenges', says Heather Kerr, country director for Save the Children in Sierra Leone. The biggest problem, Kerr says, is the shortage of trained medical staff: ‘You can put up as many hospitals as you like, but if you have no one to fill them, it’s just another building’. In Sierra Leone there are 1.9 health workers per 10,000 people. That translates into one nurse, doctor, or midwife for every 5,263 patients (compared with 77 patients per health worker in the UK).

To bridge this gap, Save the Children has trained more than a thousand community healthcare workers up to September this year. These volunteers diagnose and administer basic treatment for some of the most common causes of child mortality: malaria, pneumonia and diarrhoea. Kerr says ‘It would be preferable to have enough health professionals, but community healthcare workers are what is currently feasible—and they are very valuable. They build awareness of free healthcare, which many people still don't know about, prevent infection, and are trusted by their communities’.

Kemokai’s 11th child, a girl named Kandi, died two weeks ago. ‘She was already two, so I thought at least she was safe’, Kemokai says. Sitting next to her while she speaks is Mohammed Mansaray, a community health-care worker. He was away when Kandi fell sick but immediately sent Kemokai and her daughter to the closest health centre—a 3.5-mile walk—when he returned. However, Kandi died of malaria within an hour of their arrival.

Instead of turning to Mansaray for advice after Kandi’s death, Kemokai and her husband paid a traditional healer to try to find the cause of their misfortune. ‘He told me my children keep dying because a devil is after me. It has sex with me at night and steals my children’s blood when I breastfeed them’.

The healer told Kemokai her daughter, Howa, her only remaining child, was not safe with her. Following his advice, she sent the seven-year-old to live with relatives and vowed not to see her again.

‘I don’t think Kemokai’s children died because of a devil’, Mansaray says later. ‘I think they died from infectious diseases’. This middle-aged teacher has done much to improve health in the village, such as galvanising his community to ban outdoor defecation. ‘I have given Mamie advice about safe child-rearing, but I’m not sure she listens. I do not directly contradict her belief, though. If I did, she would simply turn away from me’, Mansaray says in his soothing voice. ‘Traditional beliefs are not going to disappear. Our fathers and even forefathers believed in them, whereas western medicine is still new to people here’.

Dr Serua Brusamento, an Italian paediatrician from Doctors with Africa Cusann, is part of this “new western medicine”. She suspects most children she sees have previously been treated by a traditional herbalist or healer. ‘The problem is, mothers don’t admit this. They know we do not approve, so even when we simply try to find out about previous substances administered, they deny it’.

Brusamento works in the maternity hospital in Pujehun, the district in which Kemokai’s village is located. The hospital entrance brings to mind an orchard, with light streaming in through a glass ceiling and a somewhat neglected indoor garden. Beyond this entrance, however, everything is cast in shadow, and the air is thick with the smell of hot, ailing bodies. ‘We’ve had six children here seriously intoxicated from a herb traditional healers gave them. We were only able to save two. I still don’t know what that herb is’, Brusamento says. She is now treating a 14-month-old girl for a large wound on her left buttock, which festered and deepened after a herbalist put a salve on it. ‘Almost all of the flesh rotted away’, Brusamento says. ‘It will take months to grow back—if the little girl doesn’t die of an infection first’.

The baby’s mother, Fatmata Koroma, says she tried taking her daughter to two health centres before going to the herbalist, but both times the nurse was out. ‘I wouldn’t take Betty to a herbalist again if she gets another wound’, the 28-year-old says, with what looks like a guilty smile, as if she had escaped a scolding.

Brusamento understands Sierra Leoneans’ hesitancy to be honest with her. ‘People may be more open with community health workers than with me—and everything that makes health more accessible, provides education, and takes local culture into account is a good thing. Plus, they are always on site’.

Accessing treatment can be difficult in Sierra Leone. During the civil war that ravaged the west African country from 1991 to 2002, roads were neglected and even dug up to slow villagers’ escape. Now streets are flecked with crater-like potholes prone to flooding, and so uneven that driving along one feels like a child strapped loosely to an oversized rocking horse.

Kerr agrees that an important strength of the community health worker programme is that it circumvents the country’s abysmal infrastructure. ‘But in future, we will have to find better ways of working with traditional healers too’.

For Kemokai, the decision to send her only remaining child away was the most difficult of her life. ‘But I did it to keep her safe’, she says, turning her head to one side to hide tears. ‘My greatest wish is to be a mother, to have just one child that survives’. Time will tell whether Mansaray can convince her his help could make that wish come true.
Malnutrition, illness, extreme domestic violence, a lack of proper housing, impeded access to public services, illiteracy, and unemployment were part of everyday life for Tereso, an indigenous youth who died in terrible agony on Jan. 12th, 2009 at the Guadalajara Civil Hospital in Guadalajara, Mexico. This is his story

Ever since childhood, Tereso had projected weakness and desolation. The majestic scenery of Cañón de Tlaxcala, a small community near Tuxpan de Bolaños in northern Jalisco, contrasted with the extreme poverty against which he had fought since adolescence. Tereso—‘Rabbit nose’, as his friends had nicknamed him—died on Jan. 12, 2009 at age 16. One fewer among the more than 44.7 million Mexicans living in poverty.

Tereso’s inner paradise had been darkened since infancy. Regional underdevelopment, combined with his father’s violent behaviour, deprived Tereso of his most basic human rights. His mother and four siblings, abandoned by the authorities, can also be added to the list of victims. High rates of malnutrition and disease; a lack of adequate housing and basic public services; illiteracy; and working arduous jobs just to survive were all a part of daily life for a great number of families in Tuxpan de Bolaños, located about three hours by car on a dangerous dirt road from the municipal seat.
women (Felipe forced these women into fulfilling his de
of Felipe, her husband, who, in addition to his frequent
pushed past the brink by the physical and sexual abuse
de Tlaxcala. Presumably, she decided to take her own life,
Spanish as huicholes, to which Tereson belonged) living in the
the 2,000 Wikáritari (the local indigenous group, known
in Tlapillo, the rest of the Wixáritari, was insufficient to withstand the se
prevailing climate in the region. His attire, like that of the
“bunny nose” because of the redness caused by the cold, the
work in order to eat and help out his family financially. Dur
icholes had beaten him up. He told me that his mother had
died, and that his father had driven him out. I decided to
take him to the local old people’s home so that he could stay
for a few days while he recovered.

Tereso had found food and a place to sleep and shelter
from the cold. The protection that the mayor had offered
him to his brief stint in the primary school in
Tlapillo. He had dropped out because he had to
in order to eat and help out his family financially. Dur
his time in school, his classmates had nicknamed him
“bunny nose” because of the redness caused by the cold, the
prevailing climate in the region. His attire, like that of the
rest of the Wixáritari, was insufficient to withstand the se
winter; a huertito (a long pair of cotton trousers), cumber
rated with traditional designs on the back side, embroidered
with cross stitch; and a kamira or kununi (a long shirt open
def to the sides and tied at the waist with a jayumay, a thick belt
of wool or yarn).

During the first five days in the Chimaltitán old people’s
home, Tereso ventured out on occasion to look for work. He
wandered here and there among the towns of far
northern Jalisco until he paid a price from his past life. A
pair of Wixáritari savagely beat him, on Dec. 27th, 2008,
in retaliation for financial debts owed by his father. On that
day, he brought himself wounded, to the municipal police
station in Chimaltitán, near to Bolaños. A huichol named
Juan was suspected of the beating, together with another
native who was not identified. We were not able to apprehend
the Felipino David Ramírez Narajio, head of public security at the Chimaltitán station. “They fled to the
hills. The natives are wild, particularly when they are
drunken. They left the young man badly wounded; he had to
go to the health centre for treatment.”

Days later, Tereso (who spoke very little Spanish) ap
peared to have a change in fortune. On Sunday Jan. 4th,
2009, at 6.30 a.m., the doctors stated that Tereso was
wandering at night in the plaza of the Aguaje Caliente
neighbourhood; I saw that he was wounded, and he told me that some hu
icholes had beaten him up. He told me that his mother had
died, and that his father had driven him out. I decided to
take him to the local old people’s home so that he could stay
for a few days while he recovered.

Teresa the aggressor was 15 years old at the time of the beating. The doctor also diagnosed Tereso with pneumonia, in addition to the wounds from the beating. Tereso was hardly able to stand up. His steps were slow. “The locals seemed to be
doing alright, but then he became very sick,” describes María de la Luz Martínez Rico, who managed the evening shift at
at home. On Sunday he ate well; we prepared a small
meal for him and he ate twice in the morning. I asked if all the eating was hurting him, but he answered “no”, shaking his head. On Monday, he was no longer able
to eat breakfast; he was complaining of a feeling of unswell

At noon, the ambulance arrived for the transfer. María de la Luz accompanied Tereso. The journey was long: they arrived at the hospital more than two-and-a-half hours later. Terese was the youngest and was administered pain medication. The diagnosis demanded a new transfer: he needed to be urgently treated at
Guadalajara Civil Hospital. “I couldn’t believe it,” says María de la Luz. “Tereso was in very serious
to have a leukaemia or bone marrow failure. But

to have a leukaemia or bone marrow failure. But

Medical reports state that Tereso had 2.5 units of haemoglobin in his blood, whereas a male should maintain an average of 16 units; that is, Tereso had just 15% of the normal amount of haemoglobin. I have only ever seen a very few people alive in this situation, during my career of over
20 years. He also had another problem: his platelet count was very low (platelets work to coagulate blood); he had
12,000, while a normal amount varies between 250,000 and 300,000. In other words, ‘in that situation,
he may spontaneously bleed from the gums, the head, or any other part of the body’, says Guirión.

The doctor recounts that when Tereso arrived at the hospital (weighing 46 kg), they asked for blood and platelets, but the Civil Hospital had only been informed of the trans
fer that morning. Blood requires three hours to be trans
fused (it must first be decoagulated), so it arrived a half hour

Tereso did not die because of the deficiencies of the health system, but rather because of the underdevelop
ment and social context of one of the most marginalised populations in Jalisco, argues José Guirión Ramírez, chief
of the adult urgent care department at the Civil Hospital.
First, the physician speculates that the youth arrived at the hospital with “a leukaemia or bone marrow failure”. But there were doubts in the coroner’s report as to the source
of Tereso’s wounds.

The head of the evening shift at the hospital, Leticia González, did not dare to specify the cause of death1 and
sent the body to the Jalisco Institute for Forensic Sciences as an
autopsy. “The doctor performed her legal requirements, but she did not want to cause problems for herself because she was unable to state who had beaten him. Taking away the
mystery of the beating, the cause of death was an inter
nal haemorrhage, cerebral or abdominal,” says Guirión. “It is probable that he had leukaemia (a group of illnesses of the blood) defined by an uncontrolled increase in white blood cells, or leucocytes) or bone marrow failure, which are
very grave illnesses.”

Medical reports state that Tereso had 2.5 units of haemoglobin in his blood, whereas a male should maintain an average of 16 units; that is, Tereso had just 15% of the normal amount of haemoglobin. I have only ever seen a very few people alive in this situation, during my career of over
20 years. He also had another problem: his platelet count was very low (platelets work to coagulate blood); he had
12,000, while a normal amount varies between 250,000 and 300,000. In other words, ‘in that situation,
he may spontaneously bleed from the gums, the head, or any other part of the body’, says Guirión.

The doctor recounts that when Tereso arrived at the hospital (weighing 46 kg), they asked for blood and platelets, but the Civil Hospital had only been informed of the trans
fer that morning. Blood requires three hours to be trans
fused (it must first be decoagulated), so it arrived a half hour
after the patient died (he had blood type O positive). And even if the blood had arrived, we would have had to wait for it to successfully pass through the veins over a period of four hours; he would have needed around four blood-transfusion packs and some 30,000 packed red blood cells to be out of danger of bleeding to death.1

It was estimated that Tereso's illness had evolved over more than six months. 'These patients let themselves die', Guitrón said, referring to the indigenous populations in general. 'They practically come to die in the hospitals, given the condition that they are in. It pains me to say it. The indigenous don't look after themselves until they finish planting or harvesting. In July or August is when they don't work, and then they come to the hospitals. 10% of the cases involving indigenous patients are serious. Tereso is just one example. He would not have died if he had been treated earlier in the Civil Hospital. His situation is not unusual to me; to be sure, the indigenous often come with cases of terrible anaemia, advanced alcoholism, cirrhosis, grave malnutrition, and even pregnancies in girls under 15.1

One week later, the communications department of the Jalisco Institute for Forensic Sciences responded with regards to Tereso's death: 'The patient died due to an acute pulmonary oedema, accompanied by pneumonia (an infection of the lungs that can be caused by a number of organisms, including bacteria, viruses, and fungi) and anaemia (a condition in which there is a lower-than-normal red blood cell count, usually measured by the amount of haemoglobin. But the Civil Hospital is the institution that should issue a cause of death, not we.' The institution did not comment on Tereso's wounds from the beating.

Although a pulmonary oedema constitutes a true medical emergency, and should therefore be identified quickly in order to begin treatment, Tereso's life ended in terrible agony because there was no communication between authorities and municipal and state medical centres. Had there been, Tereso could have been treated in a specialist hospital in order to begin treatment, Tereso's life ended in terrible agony because there was no communication between authorities and municipal and state medical centres. Had there been, Tereso could have been treated in a specialist hospital, instead of the Civil Hospital. His situation is not unusual to me; to be sure, the indigenous often come with cases of terrible anaemia, advanced alcoholism, cirrhosis, grave malnutrition, and even pregnancies in girls under 15.

There are three million people living in poverty in Jalisco, according to the federal Department of Social Development. The story of Tereso is an example of living and dying in this misery.

The Jalisco Department of Human Development counts more than 720,000 living in nutritional poverty; 1.3 million lacking basic health and educational requirements; and 2.3 million without proper clothing, housing, and transport possibilities. The department's director, Martín Hernández Balderas, highlights the benefits that human development programmes under Governor Emilio González Márquez will bring: “We are trying to reduce the number of Jaliscans living in nutritional poverty to just 365,000 by the end of this six-year term. That will reduce this problem, the most concerning, by half.”

Experts ridicule the state government's goal, in the face of blows from the economic crisis and the impacts of an influenza alert in the country.

To read the expanded version of Mario Alejandro Muñoz de Loza's article, including interviews with local politicians and representatives of the local office of the National System for Integral Family Development, follow this link: www.informador.com.mx/jalisco/2009/10/15756/fallece-la-estructura-del-vital-del-protector-de-la-familia.htm

Three million Jaliscans living in poverty

Northern Jalisco stands out for its high level of social underdevelopment. It is primarily inhabited by natives and mestizos, concentrated in the towns of Bokobos, Chimaltán, Mezquitic, and Huejuquilla El Alto. Malnutrition and

There are three million people living in poverty in Jalisco, according to the federal Department of Social Development. The story of Tereso is an example of living and dying in this misery.
Stories from the Field: Personal Reflections on Covering the MDGs

Haiti’s media and the MDGs

Quite often, the only privilege that people already living in dire circumstances have is the opportunity to share their ideas and offer their perspectives. To this end, journalists and the media have a pivotal role to play in promoting development and giving voices to the marginalised. Persistent coverage and lots of follow-up stories on development issues and the Millennium Development Goals (MDGs) may force governments and decision makers to become accountable.

However, working with media and journalists in Haiti to cover development aid and issues related to the MDGs is not easy. The Haitian media landscape, which consists of just one private daily printed newspaper, a few weeklies and approximately 300 radio and TV stations, devotes very little time and space to development. Haitian journalists are underpaid and often lack the capacity and the resources to report on development targets, which requires in-depth analysis, time, and research.

On the few occasions when these issues are addressed by the media, it is the voices of politicians and stakeholders, rather than those of the marginalised, that get attention. There are just a few foreign correspondents; after extensive media coverage related to the January 2010 earthquake, the international media seems to have deserted the country. The most serious pieces on tracking development funding were done by foreign investigative journalists with support from their Haitian colleagues.

It takes a true commitment to raise awareness of the MDGs among journalists, particularly given the fact that many media workers are often attracted by more popular or lucrative topics. With this challenge in mind, I have...
HIV/AIDS

Before the end of the 1990s, the Haitian media devoted very little attention to HIV/AIDS. The few journalists who did cover the growing epidemic lacked the necessary medical knowledge to properly explain the disease to the public. The silence and confusion contributed to social stigmatisation against those who suffered from AIDS, including several friends of mine.

I have vivid memories of a cousin whose parents were devastated by her death, seen as a curse because she was the mistress of a married man. The family, already ruined financially after trying to get her treatment, had to find yet more money to cremate her body, which shocked the community culturally, as cremation is severely frowned upon in Haiti, where there is a deep respect for the dead and a belief in resurrection.

My cousin’s death led me to commit to working with people infected and affected by HIV/AIDS, and to raise awareness among fellow journalists, so they can report and emphasise the human angle in their stories. Fortunately, training programmes, some of which I helped to launch, have helped to bridge that gap and capacitate journalists to take on complex healthcare topics. Seeing the need for media workers to have a reference guide for training adult journalists how to cover child-related topics, particularly child trafficking, a common practice in Haiti, where poor rural families often send their children to larger towns or the Dominican Republic to work as domestics. The resulting coverage has led to journalists looking more closely at local root causes for child trafficking and has brought about improvements in the situation.

Building environmental sustainability

The forested area of Haiti was reduced considerably over the last four decades. The causes of environmental degradation in Haiti stem from poverty and include, among others, an increased demand for firewood and wood for construction, the need for food, and the destruction of biodiversity, are long-term problems that will not be solved soon. However, the public tends to forget them without continuous media coverage.

Despite the disruption caused by the January 2010 earthquake, which destroyed most of the country’s healthcare infrastructure and made it difficult to supply essential drugs and services, Haiti has stood out in the Caribbean for its remarkable progress in fighting the spread of HIV/AIDS. Adult prevalence declined from 6.1 percent in 1993 to under 2 percent, according to a joint US/Haitian government report, in 2012. I am proud to say that the media, through increased coverage of HIV/AIDS, has contributed to this improvement.

Working with Haiti’s children and youth

In Haiti, children are often viewed as passive bystanders, rather than as active members of society. In recent years, I have been working and developing activities for hundreds of young men and women, encouraging them to actively participate in the community via the media.

Various workshops and practices that I have developed have trained young people in print journalism, radio and video reporting, and photography, and allowed participants to produce programmes and reports on the state of children’s rights. These productions are broadcast on several stations in Port-au-Prince as well as on community radios.

Training has also focused on teaching adult journalists how to cover child-related topics, particularly child trafficking, a common practice in Haiti, where poor rural families often send their children to larger towns or the Dominican Republic to work as domestics. The resulting coverage has led to journalists looking more closely at local root causes for child trafficking and has brought about improvements in the situation.

Food insecurity and the need for potable water are recurrent. Many school-age children are not able to attend school. Haiti’s development continues to be heavily reliant on external funding, but just half of the $382 million requested from international donors has been provided.
From Canada to Ghana: A Personal Account (Canada/Ghana) Sophie Nicholls Jones

In October 2007, I left Canada and headed to Ghana with an assurance that, as a print journalist in Toronto, I understood and therefore knew how to detect, unravel, and tell a news story, no matter what context in which I happened to be placed. That is, after all, what my training at Ryerson University’s journalism school in Toronto had instilled, and my practice as a news reporter at Sun Media had implemented and sustained. I was enthusiastic yet anxious, confident yet humble, and certainly not over-run with expectation or presumption. Or, so I thought.

My pre-departure training with Journalists for Human Rights (JHR)—the Canadian non-governmental organization that I would work for in Ghana’s capital city of Accra—was a compilation of exercises with my fellow JHR co-workers. Our role, as journalist trainees, was to work alongside Ghanaian journalists, helping build their capability to report effectively on human rights and social justice issues. Our main duties were mentoring, coaching and training on such topics as media ethics, interviewing skills, generating story ideas and reporting on their country’s systemic issues such as poverty, healthcare, and education—issues at the root of the MDGs. Voices of the local population, their stories, experiences, and hardships were generally ignored or considered irrelevant. What a politician or expert had to say had far greater clout and was considered the only source necessary to relay a message.

Collectively, we brainstormed what human rights meant to us as Canadians, how that definition would differ depending upon one’s country of birth, upbringing, and education — and why. We sorted through and analyzed various African newspapers, reflecting upon the differences between our own country’s media coverage and what stood out to us in these publications. We discussed what our role would be overseas for the next eight months, the challenges we may face and how to overcome these. Finally, we reviewed JHR’s role as a media development organization, rooted in a rights-based approach to development work. We analyzed the organization’s responsibility to help achieve the MDGs, and how we would effectively assume our roles to do just this.

Following a mandatory cross-cultural communications course on how to successfully live and work overseas, and after reviewing the guidance notes from a former JHR trainer, I felt—let us say—relatively prepared.

However, it was not long after arriving in Accra, and subsequently working at two local newspapers—a major daily and a smaller, privately-owned daily—when my assurance shifted. What I knew to be standard journalism practice in my own country was by no means what it was in Ghana, particularly when it came to determining what is newsworthy and what constitutes a ‘real’ story.

Of the journalists I worked alongside, I felt a sense of complacency when it came to generating story ideas and reporting on their country’s systemic issues such as poverty, healthcare, and education—issues at the root of the MDGs. Voices of the local population, their stories, experiences, and hardships were generally ignored or considered irrelevant. What a politician or expert had to say had far greater clout and was considered the only source necessary to relay a message.

Though there was a general knowledge of the MDGs, the importance of incorporating them into a story was not understood. A “show, don’t tell outlook” was missing.

Why was this and how could it be changed?

During my first placement at the major daily, I detect-ed a stringent, authoritative dynamic between the editors and reporters. Reporters would wait to be assigned stories, then attend the relevant press conferences, and later return to the newsroom to meet their deadlines.

Editors did not encourage journalists to generate their own stories, think outside the box, or push the boundaries beyond the standard press release. This power dynamic seemed to stymie those reporters keen on working inde-pendently. Convincing the editors, who were difficult to approach and negotiate with, that there were other stories worth telling was also challenging and perhaps the reason journalists hesitated to do so.

After several attempts to undertake my role, I left and moved to a smaller, privately-owned newspaper for the remainder of my term with JHR. There, the editorial team was much more open and receptive. I still, however, remained disillusioned by the journalists’ drive and motivation. The press release continued to underpin the newspapers’ content. Reporters seemed more comfort-able attending news conferences, where they could collect compensation for time and transportation (known as T&T). Rewriting press releases or speeches was standard as opposed to brainstorming, researching, and writing ‘home-grown’ stories.

Even during press conferences, I witnessed a lack of incentive to ask questions, take notes or challenge what was presented. Additionally, press conferences ran too long—sometimes up to three hours—leaving reporters with little time to conduct other interviews and meet their deadlines, even if they desired to do so.

This lack of incentive was driven by other factors. In Ghana, journalists receive little compensation for their...
efforts. The average salary is less than US$ 100 per month—and that’s with experience. More often than not, media outlets do not compensate their employees for travel costs to and from conferences or events, hence the need for T&T compensation.

Having harped on the issues, there are some highlights and accomplishments during my eight-month term that I would like to relay. A few journalists I worked with did produce stories that challenged the status quo and brought relevant human rights, social justice, and MDG-backed issues to light. Topics such as the sanitation risks of public toilets, the questionable treatment of disabled children residing at a mental institution, and the abominable working conditions for informal employees at an electronic waste dump site were tackled and given decent representation.

The story on public toilets made the front page and the electronic waste feature became a double-page spread, with multiple photos and substantial text. As well, I noticed that, once on site, the reporters’ interest, curiosity, and critical analysis peaked. In my mind, the ‘true journalist’ emerged. With this in mind, I believe it is not that the reporters did not want to dig deeper and get to the heart of a story. It was that the incentive to do so may not have been there, and certainly was not encouraged.

Behaviours and practices across the media industry—particularly in Ghana and other nations where freedom of the press is restricted and pressure to adhere to political agendas prevails—must shift. Editors must be called on to tap into the talent before them. Reporters’ assets must be fully realized. Journalists worldwide must be trusted to tap into the talent before them. Reporters’ assets must be fully realized. Journalists worldwide must be trusted and empowered to help drive the media outlets’ content. A more collaborative approach in newsrooms can boost morale and improve the overall quality of work.

Reporters need to be encouraged to approach every story from a human right’s perspective and with the MDGs in mind. The voices of those unheard must be listened to and appropriately incorporated. Authoritative figures must be challenged by refusing to accept the status quo, posing the right questions, and critically analysing the responses. This will diversify and strengthen media coverage, holistically representing the population that it is meant to serve, addressing the issues that need to be altered, and subsequently bringing to light what the MDGs aim to eliminate.

Additionally, salaries need to increase, and compensations for travel costs must become an industry standard, driving away the need for T&T handouts. With all this in place, the press release will no longer exclusively drive a newspaper’s content, and reporters themselves will decide what news conferences they attend, and how long they stay.

These changes, I believe, can and will happen with increased training and a greater understanding of and adherence to international journalism standards and the MDGs. We, as journalists, irrespective of where we live and practise our trade, are responsible for shedding light on human rights issues and social injustices. It is our role to put pressure on governments and leaders to implement change, while helping achieve the MDGs.

Generating awareness, educating the citizens we represent, and holding those leading the way accountable for their actions and decisions is the only way international commitments will be fulfilled and change will occur.

The deadline for the MDGs is 2015—just two-and-a-half years away. Though progress has been made, we are nowhere near achieving these goals. This can only happen if those that have the ability to lead the way can motivate and empower others to follow.

Sophie Nicholls Jones is a Toronto-based journalist working as a copy editor for Metro News International. Born and raised in Canada, her career as a journalist began after graduating from Ryerson University’s journalism program in 2001. Over the last decade, she has worked as a newspaper reporter with Sun Media Corp. and as a freelance writer for various Canadian publications.

A desire to live and work abroad led Sophie to Ghana in 2007, where she served as a journalist trainer with a Canadian NGO, Journalists for Human Rights (JHR). This experience sparked an interest in overseas development, motivating her to pursue a postgraduate degree in International Development from Toronto’s Humber College. Using the skills and knowledge acquired from that program, Sophie also works on a part-time basis with the charity organization Canadian Journalists for Free Expression (CJFE).

Media and the MDGs in Papua New Guinea

Reporting on the Millennium Development Goals (MDGs) in Papua New Guinea is a critical job—but it is also a difficult one, requiring dedication and responsibility. Those who write about the MDGs must be able to capture the human angle in their stories and, moreover, they require in-depth knowledge about their subject matter in order to understand the needs of the people and communicate these effectively to decision-makers.

The publication and broadcasting of news on the MDGs is very important in every newsroom in Papua New Guinea. The media here has a strong relationship with local communities, the government, churches, and non-governmental organisations and, in many ways, has already had an impact in terms of educating people about the MDGs. Radio stations, newspapers, television programmes, freelancers, and public relations personnel all aim to work together to address pressing development issues. By doing so, they are raising not only public awareness but also the necessary government attention to ensure that progress is on track to achieve the MDGs by 2015.

What inspires me to report on the MDGs in Papua New Guinea

Last year, Papua New Guinea ranked 153rd out of 180 countries on the Human Development Index (HDI), falling into the “low human development” category. Over the past 10 years, the government has focused its attention on improving its HDI standing: development initiatives have been launched, bills and policies passed, and declarations signed. But many of these measures have fallen short.

For instance, the Papua New Guinea government has signed but has so far failed to ratify the UN Convention on the Rights of Persons with Disabilities (UNCRPD). The government’s actions in this case have left a lot to be desired by the estimated 10 percent of the country’s population that is disabled.

The MDGs cover the very areas that need prompt attention in Papua New Guinea and were adopted here to drive development strategies in the social, economic, and political arenas. However, it is clear that properly addressing high rates of child and maternal mortality, illiteracy, youth unemployment, school avoidance, HIV/AIDS and other killer diseases, and domestic violence plus pressing gender and environment issues requires a collective effort. This realisation, and the need for specific mechanisms to tackle these development issues, has led me to advocate for and report on the MDGs.

In my reporting, I am often exposed to the reality of growing poverty and hunger in my country. On one occasion, I came across 11-year-old Raphael, who came from a broken family and who had been living on the streets since he was nine years old. Raphael had never been to school and could not read or write. When I found him, he was homeless, hungry, and appeared hopeless. He wore torn clothes and had no footwear. It was hard fending for himself on the streets, he told me.

I was saddened to hear about the plight of Raphael, who is just one of 20,000 homeless children in the capital city of Port Moresby alone. Such scenarios inspire me to write about the MDGs and other development approaches in order to help my community.

How I report on the MDGs

As a journalist, I am aware of the challenges and barriers my country continues to face. Thus, in my writing, I try to be as precise and frank as possible in order to effectively deliver what needs to be known.
When covering the MDGs, I look for the angle that embraces the human aspect of the story, focusing on the consequences that a given situation has on individual lives. Doing so can be quite challenging at times because in Papua New Guinea talking about people’s livelihoods can be very personal.

First and foremost, the question that needs to be asked is: ‘What is hindering development in the community?’ Trying to pinpoint the answers to this question makes reporting on the MDGs a challenging task.

Then, I ask myself:
• What can I do as a journalist to help these affected people?
• Is the Papua New Guinea government implementing plans and initiatives to address these problems?
• How much has been achieved through these plans and initiatives?
• What is the best way to work in partnership with my government and development partners to eradicate poverty in my country?

These thoughtful questions require an answer, which, depending on how I report it, can compel immediate action on the part of those with the power to initiate change.

Barriers

In Papua New Guinea, the main barriers to MDG reporting include limited public awareness, a lack of modern resources and media technology, the mountainous terrain, and ineffective leadership.

According to a recent estimate by UNESCO, at least 44% of Papua New Guinea’s population is illiterate—a figure the organisation partly attributes to the fact that over 800 languages are spoken natively in the country. So educating people about the MDGs in a way that they will understand and react positively to is in itself a major obstacle that must be overcome.

Many newsrooms are not equipped with the latest software or infrastructure to effectively access and communicate information. The country’s rugged terrain—the geography is such that air travel is often the only viable option—makes the distribution of news all the more difficult. It can also mean that the benefits of an MDG-oriented initiative that takes place in an urban area do not always reach more remote populations.

Poor leadership on the part of the authorities is also challenging. It is very discouraging to report on government agencies not implementing MDG-oriented projects that would benefit the people.

In Papua New Guinea, every journalist faced with these constraints has to put extra effort into investigative reporting on the MDGs. Again, highlighting the human angle can increase the chances of getting a story a spot on the television, radio news bulletin, or newspaper page—which, in turn, can lead to increased awareness and advocacy opportunities.

Another effective way to improve MDG reporting is by working together with development partners such as faith- and community-based organisations and business houses or other supporting agencies.

Given the current situation in Papua New Guinea relative to the MDGs, it is evident that there needs to be a collective effort among citizens, national and international development partners, and the national government in order to achieve the MDGs by 2015. Papua New Guinean journalists can and already do play a critical role in this effort by keeping tabs on the initiatives and policies needed to arrive at the desired outcome.

Shirlyn Belden is a journalist for the daily newspaper The National in Papua New Guinea. Her specialty is covering social issues that affect women and children; and issues related to HIV/AIDS, disability and community development. She also contributes to The National’s political and health-care coverage.

Shirlyn graduated from the University of Papua New Guinea in 2011 with a B.A. in Media Studies. She joined The National after graduation, and lives in Port Moresby.

Young girls participate in a traditional dancing show on Nusa Island, Papua New Guinea, a country considered to have one of the most severe gender disparities in the world. Courtesy Josselin Amalfi.
Why write about the Millennium Development Goals?

It has been hard for me to identify what it is that motivates me to write about the Millennium Development Goals (MDGs) and the importance of fulfilling them. To start working on the topic of human rights, many journalists experience a triggering event. One journalist, for example, might be motivated by statistics that reveal poor families’ struggles to afford school and university for their children. Another journalist might find a single personal event inspires the need to report on human rights.

The spark, for me, was a little boy called Eliécer; I encountered him when I covered “The Hunger Walk” (La Marcha del Hambre) in 2002. He was just one of many severely malnourished children of rural farm labourers from northern Nicaragua who walked their families and meagre belongings to the capital, Managua, to ask the government for food, after a fall in coffee prices left farm owners with no incentive to harvest their crop, and with no need for labourers.

Eliécer had been hospitalised for malnutrition several times before the walk, but, each time, doctors told his mother that he could not be cured at the hospital but at home, with food—food that she did not have.

Without even the strength to flick away the flies that landed on his face, Eliécer lay on a pile of wood, inside an improvised dwelling made of plastic. A human-rights attorney saw him and sent him to a clinic, but it was already too late: Eliécer died, another victim of a government unwilling to look after its people.

The MDGs represent an essential chance to change the world, and the lives of people who live in it. The goals serve both as an effective tool to accomplish change and as a frame of reference to measure not only advances, but also disregard.

Yet, twelve years after their unveiling, nothing has changed. Yes, there have been some programmes established, but at a structural level no differences can be seen. Treaties and agreements—both those signed and those still to come—are important, but are no guarantee of change. The Nicaraguan government, in its efforts to meet some of the MDGs, has made international commitments, for example, to protect the environment, which it lists as its third-highest priority, yet spends only 0.7% of its national budget on doing so. Not even 1%—hard to believe.

Even though more than a few independent analysts have confirmed that governments are distorting numbers for their own convenience, it is evident that there is a crisis: people still beg for food and children still do not attend school, even though education is free. But would you send your child to school barefoot, with no food, no pencil, and no notebook?

It is difficult to write about hunger and shortages when you have had to endure them. It is difficult to write about gender equality when you come from a country where a single mother is less likely to get a bank loan for a car than a single man with absolutely no responsibilities. It is certainly difficult to write about improving maternal health in a country where women aware of the risks of pregnancy are afraid to try for children now that abortion is now illegal. In 2006, the Nicaraguan government repealed the “therapeutic” abortion legislation that prioritised the lives of women in cases of disease or life-threatening complications. Now, with abortions banned under any circumstance, doctors are scared of going to jail for saving the lives of these women, so they avoid them or transfer them to other hospitals until they die, leaving newborns and their siblings as orphans.

While it may well be hard for journalists to report on stories so close to their own narrative, we must stay true to our purpose as journalists, stand strong in our duty to tell the stories that need to be told, and tell the world what is happening. This is our commitment, one in which we must believe, in order to not lose another Eliécer.
Acknowledgements

The International Press Institute (IPI) is deeply grateful to the hard work, enthusiasm, and dedication of the many people who helped make this book a reality.

First and foremost, we would like to thank all the book’s contributors, who donated their time and expertise for the benefit of their journalist colleagues in countries where the promise of the Millennium Development Goals (MDGs) has not yet been fulfilled.

IPI extends a very special thanks to the OPEC Fund for International Development (OFID), which saw the value of this project and provided IPI with a grant to ensure its completion.

The Spanish news agency EFE, as well as the European Pressphoto Agency (EPA), donated the vast majority of the book’s images, which were taken by their talented photographers, and deserve special recognition here. Thank you to Josselin Amalfi and Alfredo García for the use of their photos.

This book would not have been possible without the unmatched skill and craft of its text editor, Lucy Cripps, who carefully reviewed each contribution for style and accessibility.

Thanks to the respective UN Regional Commission officials—Nabil Abu-Dargham, Jaromir Cekota, Aloysius Fonienky, Francyne Harrigan, Gerardo Mendoza, Srinivas Tata and their teams—for taking the time and care to write the regional updates. Similarly, thank you to Gonzalo Pizarro and associates at the UN Development Programme (UNDP) for their contribution on the future of the MDGs.

IPI is grateful to Nele Mailin Obermueller, Mario Alejandro Muñoz de Loza, and Syed Zain Al-Mahmood for giving permission to reprint their excellent investigative reports. Similarly, the International Consortium of Investigative Journalists (ICIJ) was kind enough to allow the use of their access-to-information resources. Thank you also to Jessica Zoe Brettschneider.

Finally, thanks to Monica LoCascio for her meticulous, expert work in designing the beautiful book you now hold in your hands.
